Initial Response of the European Society of Pediatric Radiology Child Abuse Taskforce to the Swedish Agency for Health Technology Assessment and Assessment of Social Services' Document on the Triad of Shaken Baby Syndrome

To paraphrase the author of a recent editorial, “Abusive neurotrauma exists” [1]. We are therefore concerned by the recent report on the validity of abusive head trauma/shaken baby syndrome commissioned by the Swedish Agency for Health Technology Assessment & Assessment of Social Services [2]. The systematic review identifies over 3,000 publications, which the experts distil down to 30 for review of which only two [3, 4] were deemed of up to moderate quality and thus summarized in more detail (Table 4.1, pages 22 and 23 of the report). The report concludes firstly that there is limited scientific evidence that the triad of findings and thus its individual components (subdural haemorrhage, retinal haemorrhage and cerebral oedema) indicate the shaken baby syndrome and secondly that there is insufficient scientific evidence to assess the diagnostic accuracy of the triad to identify shaken baby syndrome.

Although we requested it, in letters from Dr Susanna Axelsson (Director General, SBU DDS, PhD) and Professor Jan Liliemark (Head of Department, SBU) dated 20 October 2016, we were denied access to review the report prior to publication, on the basis that a careful systematic evaluation of all the available scientific evidence (by a team that included several experts in relevant scientific areas) had been conducted and that therefore our input was not required. In the same letter, Dr Axelsson and Professor Liliemark informed us that the report would be published in Sweden in October and be published in English in “the fall” (autumn) 2016. We have since been informed that the English translation will not be available until spring 2017. As such, we make it clear that we have not yet had access to a formal translation of either the report or its summary. Until we have reviewed it, we can neither endorse the findings of the report nor clarify where we disagree with it.

Given the likely significant international impact of this report in child protection cases, we had hoped that the Swedish Agency for Health Technology Assessment and Assessment of Social Services, would publish a translation of the full report before the end of 2016 as promised in their letters to us. Since this has not been the case, we cannot issue a formal position statement. We patiently await the translated report and in the meantime, end this commentary much as we began; we cannot ignore the concept of abusive neurotrauma in children. It not only exists, but may be increasing in incidence with associated increases in patient and societal costs [5]. When there is no skull fracture, does that exclude impact? What clinical and radiological features support shaking and when there is no impact, if shaking is not the aetiology, then what is? These are the important questions which need to be answered – and although this is an emotive subject, they must be answered robustly and objectively.

Initial Response of the European Society of Pediatric Radiology Child Abuse Taskforce to the Swedish Agency for Health Technology Assessment and Assessment of Social Services' Document on the Triad of Shaken Baby Syndrome

Dr Amaka C Offiah, Chair, ESPR Child Abuse Taskforce, Sheffield, UK
Professor Catherine Adamsbaum, Chair of the Pediatric Radiology Department, Bicêtre Hospital Paris Sud University, France ESPR, former co-chair of abuse taskforce; Director of the French abuse child diploma (DIU)
Professor Maria Argyropoulou, Head of Radiology Department, Medical School, University of Ioannina, Greece
Dr Katharine Halliday, Consultant Paediatric Radiologist, Chair, British Society of Paediatric Radiologists, UK
Dr Tim Jaspan, Consultant Paediatric Neuroradiologist, Nottingham, UK
Dr Catherine Owens, BSc MBBS FRCP FRCR, Consultant Radiologist GOSH and Reader UCL, President ESPR, Senior Councillor ESR
Assistant Professor Maria Raissaki, Co-Chair, ESPR Child Abuse Taskforce, Heraklion, Crete
Professor Karen Rosendahl, Dept. of Paediatric Radiology, Bergen, Norway
Dr Neil Stoodley, Consultant Paediatric Neuroradiologist, Bristol, UK
Professor Rick R van Rijn, Department of Radiology, Emma Children's Hospital - Academic Medical Center Amsterdam, The Netherlands
