Figure 1. Principles of the delirium intervention

Figure 2. Levers, barriers and suggestions for future modifications of the delirium intervention

Figure 1

Delirium	Change practice
<ul style="list-style-type: none">❖ Measures to identify and modify reversible risk factors in residents, e.g. facilitating use of aids for visual and hearing impairment❖ Changes to the physical environment to reduce its propensity to cause or worsen delirium e.g. use of adequate lighting and clear signs❖ Examination and modification of organisational factors which may impact on delirium e.g. hand-washing policies, systems to review medication by pharmacist❖ Screening and early detection of delirium and prompt investigation for underlying causes	<ul style="list-style-type: none">❖ Education and training using a range of methods including interactive teaching❖ Presence of a 'clinical lead' to facilitate implementation and drive change❖ Local 'champions' to take on training of staff❖ Reminders e.g. posters, checklists❖ Systems to check and improve implementation of changes to practice e.g. audit and feedback❖ Use of multiple approaches to increase adherence❖ Adaptation to meet local needs❖ As simple an intervention as possible

Figure 2

LEVERS
<p><i>Flexibility</i></p> <ul style="list-style-type: none"> ▪ Varying timing of training sessions (afternoons usually better) ▪ Training delivered as 3x 20 minutes, 2 x 30 minutes or 1x 1 hour sessions to suit home ▪ Variation in size of teaching group, depending on how many staff could be released ▪ Meetings at care home (e.g. office /residents' lounge allowing staff to keep an eye on residents) ▪ Using time at care homes to liaise with staff, when meetings cancelled <p><i>Involving all staff</i></p> <ul style="list-style-type: none"> ▪ Including qualified, unqualified, managers, night staff, other professionals ensured spread of knowledge ▪ Having a range of perspectives in working groups maximised usefulness of materials produced <p><i>Identifying and responding to training needs</i></p> <ul style="list-style-type: none"> ▪ Clarifying terminology – “delirium”, “acute confusion” “dementia” ▪ Training on how to make structured observations ▪ Liaising with training co-ordinator to address gaps in knowledge (e.g. identification of dehydration) ▪ Discussing examples given by staff and issues arising as training points, reinforcing good practice & highlighting misunderstandings <p><i>Tailoring to individual home</i></p> <ul style="list-style-type: none"> ▪ Focusing on issues relevant to home and developing materials specific to each home ▪ Breaking tasks down into small steps and identifying specific difficulties encountered for each home <p><i>Between session tasks</i></p> <ul style="list-style-type: none"> ▪ Applying knowledge from training between sessions through practical tasks (e.g. monitoring own urine for effects of dehydration) ▪ Piloting materials produced by working groups <p><i>Developing pride in care home staff</i></p> <ul style="list-style-type: none"> ▪ Engendering enthusiasm in group members, labelling working group as “specialists” ▪ Sharing ideas with other homes ▪ ‘Old’ group members explaining to new recruits <p><i>Support of managers and other professionals</i></p> <ul style="list-style-type: none"> ▪ Encouraging staff to utilise intervention and in implementing changes to practice <p><i>Minimum extra work for staff</i></p> <ul style="list-style-type: none"> ▪ Sharing ideas between home as starting point for developing own materials ▪ Explaining how project complements and links with existing training– overlaps, not lots more work ▪ Modifying existing paperwork rather than creating more ▪ Linking with other training (NVQ)
BARRIERS
<p><i>Practical problems within the homes</i></p> <ul style="list-style-type: none"> ▪ Sickness ▪ Refurbishment ▪ Staff leaving. ▪ Constraints on staff time <p><i>Poor communication within homes</i></p> <ul style="list-style-type: none"> ▪ Language difficulties ▪ Poor communication between shifts ▪ Poor record keeping <p><i>Poor organisation in homes</i></p> <ul style="list-style-type: none"> ▪ Poor time keeping ▪ Last minute rota changes ▪ Poor communication between managers and other staff <p><i>Negative staff attitudes</i></p> <ul style="list-style-type: none"> ▪ Staff feeling powerless to affect change ▪ Concerns about increased workload ▪ Unhelpful attitude of other staff members

Unsupportive managers

- Managers not completing agreed tasks
- Intervention seen as a burden
- Poor communication with other staff about the project

SUGGESTIONS FOR IMPROVEMENTS

- Include materials in induction pack
- Invite new staff in first few weeks of starting*
- Booster session for staff who have received training
- “Buddying up” in teaching sessions to apply teaching between sessions*
- Using the checklist in the education sessions*
- Establishing ‘delirium carers’ in the home to keep the work ongoing*
- Inviting other professionals involved in the care of residents to training*
- Approaching NVQ trainers to get delirium included in syllabus

*=those tried with good effect during intervention
