**Table 2. Summary of differences and interactions (*F* ratio from ANOVA) in stomatal abundance and aperture on sporophytes of moss and hornwort species grown under 440 ppm and 1,500 ppm [CO<sub>2</sub>]<sub>a</sub> (Figure 2). ANOVA has 1, 279 d.f.; \*\*\**P*<0.001; post-hoc Tukey test *M. hornum* *n* = 50 and 49, *P. juniperinum* *n* = 50 and 50, *P. laevis* *n* = 95 and 50, *A. punctatus* *n* = 30 and 30 for stomatal abundance at ambient and elevated [CO<sub>2</sub>]<sub>a</sub> respectively, *n* = 5 for stomatal aperture)**

	<b>Plant species</b>	<b>CO<sub>2</sub> treatment</b>	<b>Species x CO<sub>2</sub></b>
Stomatal abundance on sporophyte	198.06 ***	0.67	2.44
Stomata aperture (μm)	70.19 ***	3.20	0.15
