British Muslim university students' perceptions of Prevent and its impact on their sense of identity

Journal:	<i>Education, Citizenship and Social Justice</i>
Manuscript ID	ESJ-16-0046.R1
Manuscript Type:	Original Article
Manuscript Keywords:	British, Muslims, university, students, perceptions, identity
Abstract:	The Prevent strategy at UK universities is designed to reduce the possibility of university students becoming radicalised and so working against them supporting or directly engaging in terrorist activities. In this study we were concerned to reflect on our reading of some relevant literature by exploring the views of a sample of British Muslim students regarding Prevent, and in particular, its impact on their sense of personal and national identities as British Muslims. Nine British Muslim undergraduate students completed an online questionnaire. We discuss findings suggesting that there is limited general understanding and negative characterizations of Prevent, with perceptions of this policy being ineffective and inappropriate for higher education contexts. We suggest that more work is needed to develop relevant educational initiatives in the development of a tolerant society and that there is potential in discourse analysis to help reveal further insights into Muslim students' identities.

British Muslim university students' perceptions of Prevent and its impact on their sense of identity

Abstract

The Prevent strategy at UK universities is designed to reduce the possibility of university students becoming radicalised and so working against them supporting or directly engaging in terrorist activities. In this study we were concerned to reflect on our reading of some relevant literature by exploring the views of a sample of British Muslim students regarding Prevent, and in particular, its impact on their sense of personal and national identities as British Muslims. Nine British Muslim undergraduate students completed an online questionnaire. We discuss findings suggesting that there is limited general understanding and negative characterizations of Prevent, with perceptions of this policy being ineffective and inappropriate for higher education contexts. We suggest that more work is needed to develop relevant educational initiatives in the development of a tolerant society and that there is potential in discourse analysis to help reveal further insights into Muslim students' identities.

Introduction

The UK Government's Prevent Strategy, as outlined in the Counter-Terrorism and Security Act 2015 and subsequent official guidance on its implementation (DfE, 2015a,b; HEFCE, 2015), is designed to undermine the process by which individuals become drawn into carrying out acts of terrorism. The implementation of this strategy became a legal duty for UK universities in September 2015. In this article we consider issues arising from a review of literature, describe and discuss the methods we used to gather and analyse data from a small sample of respondents based in universities and develop an argument about Prevent. We argue that our respondents have a negative reaction to Prevent; that educational initiatives congruent with the academic environment of a university are needed to help develop further understanding and that research informed by discourse analysis would be useful.

Reviewing the Literature Relevant to Prevent and Higher Education

Our work emerged from discussions between the authors of this article, some of whom had already undertaken a literature review for a related

1
2
3 piece of work (Szczeppek Reed, Said and Davies in press). For this article
4 we built on the searches we had previously undertaken and reviewed
5 rigorously articles in academic journals, policy statements and media
6 reports in which the following terms and words were highlighted:
7 Prevent; Islam; Muslim; identity; Prevent; higher education; students;
8 terrorism; fundamental British values. As such we do not claim to have
9 completed a formal and exhaustive, comprehensive literature review but
10 we do see our dynamic approach as being appropriate in a fast changing
11 context for capturing some of the themes relevant to our small scale
12 empirical work. On the basis of our reading we explore in this section of
13 the article issues to do with the focus in Prevent on the supposed
14 connection between terrorism and Muslims; the appropriateness of this
15 initiative in academically focused higher education institutions; the
16 characterization of Prevent as a matter centrally concerned with pastoral
17 care; the effectiveness of Prevent; and the relationship between Prevent
18 and fundamental British Values.

- 24 • Conflating terrorism and Islam

25
26
27
28 Whilst references to terrorism are contextualised widely across the full
29 range of possible settings, whether it be the far-right, the far-left, pro-
30 racist, anti-racist, animal rights, anti-hunting, and anti-abortion, there is
31 little doubt that the main focus of Prevent concerns ISIS and has its
32 origins in the London Bombings in July 2011 and the rise of ISIS (also
33 referred to as DEASH), primarily in Syria and Iraq, and acts of terrorism
34 in the EU, including Paris in November 2015 and Brussels in March 2016
35 (Warren, 2016). The wider context for this work includes recognition of
36 the recent increase in the Muslim population of the UK (to approximately
37 3 million) with commonly held inaccurate views that the size of the
38 community is much larger (Gani, 2015). The Muslim community is
39 frequently the subject of high profile media attention involving, for
40 example, the so-called Trojan Horse affair in Birmingham in which it has
41 been alleged that activity inappropriate for British democracy was
42 occurring in schools (Arthur, 2015). In this context Muslims studying at
43 UK universities, have particular concerns that it is their behaviour that is
44 primarily being monitored by Prevent. It is interesting to note here that
45 the revised guidance produced by the Committee of University Chairs
46 (2016) has a section on frequently asked questions concerning the
47 implementation of Prevent, of which the first question is “Is this an anti-
48 Muslim agenda” (p. 2). Whilst the advice given to universities is to
49 “avoid a specific focus on any one particular group” the fact that this
50 question is posed is itself a reflection of the assumption made by many
51 that the Prevent would not exist if it were not for the need to respond to
52
53
54
55
56
57
58
59
60

1
2
3 terrorist activities perpetrated in the name of Islam. The choice of “anti-
4 Muslim” in the question is surprising as it focuses on the prejudicial
5 quality of Prevent.
6
7

- 8
9 • Prevent and the implications for those located in institutions
10 dedicated to academic enquiry
11

12
13 Within Universities, much of the discussion about Prevent has centred on
14 whether it curtails free speech, and whether it constrains academic
15 enquiry. These concerns have been taken up by many university students
16 and academic staff who have argued that Prevent is not fit for purpose
17 and should be revised or withdrawn (Cram, 2016; Furedi, 2016; Sabir,
18 2016). A campaign entitled “Students not Suspects” has argued strongly
19 that Prevent not only fuels Islamophobia, but actually institutionalises it
20 (Afzal, 2016; Students not Suspects, 2016).
21
22

23
24 Durodie (2016) has expressed concerns regarding the Prevent strategy
25 within the context of students at university, in terms of how it deals with
26 freedom of expression within academia. He argues that a narrative has
27 been developed that inflammatory rhetoric may have a dangerous impact
28 on suggestible students. He argues that in the wake of the Charlie Hebdo
29 massacre in Paris in 2015, the UK Government needed to be seen to be
30 doing something about the way in which some university campuses were
31 providing a forum within which those advocating extremist behaviour
32 could do so unchallenged. This led to universities, as part of the Prevent
33 strategy, being required to show how outside speakers were vetted, and
34 how the content of potentially controversial talks would be monitored (for
35 example, by ensuring that the person chairing the meeting would
36 intervene if needed, and/or requiring that the outside speaker would need
37 to agree to their talk audio-recorded). He argued that such compliance to
38 risk-management measures may promote a climate of distrust concerning
39 University Muslim Societies.
40
41
42
43
44
45

46
47 The extension of risk-management to block access to certain (most often
48 jihadist) websites has also been seen by some as a threat to academic
49 freedom, and some cases have been cited of research students being
50 questioned about their use of books or web-based material on terrorism,
51 which was subsequently identified as being for legitimate academic
52 study. Durodie (2016) has argued, that taken together, there is a real
53 danger, that in managing risk, as required by the Prevent strategy, a
54 climate of mutual suspicion and distrust is being fostered.
55
56
57
58
59
60

- Prevent as pastoral care

Official documentation and training courses concerning the Prevent Strategy in Higher Education have emphasised that Prevent is primarily about the pastoral care of university students. Its main aim is to block the process through which exposure to radical and extremist narratives that incite terrorist activity, can lead to an individual engaging in terrorism.

At university level Prevent has three main elements: (i) ensuring speakers on campus do not incite terrorism, (ii) ensuring that students (and staff) on campus cannot use the university networked computer system to access websites that incite terrorism, and (iii) ensuring that any behaviour by a student (or member of staff) that raises a serious concern that they may be on the path towards terrorism should receive pastoral support from university staff (or other agencies) to stop the process developing further, or indeed to reverse it through de-radicalisation mentoring.

The notion that the Prevent strategy should be seen as a form of pastoral care, has meant that a number of practitioners, particularly social workers, youth workers, counsellors, health workers and teachers, working in the area of child protection and safeguarding have discussed the extent to which the Prevent strategy aligns with their professional practice (e.g. Stevenson, 2015). Whilst practitioners with expertise in safeguarding children operate within well-established frameworks for their practice, the idea that safeguarding vulnerable British Muslim university students from radicalisation can be incorporated under the same general umbrella raises a range of problematic issues.

For example, Coppock and McGovern (2014) have been very critical of how the notion of ‘psychological vulnerability’ has been applied to young British Muslims. They are particularly concerned about how a narrative has been developed and promulgated based on a link between ‘risky Muslim identities’ and terrorism. The overwhelming proportion (c. 90 percent) of referrals of individuals who are seen as being, possibly, on the pathway to radicalisation are Muslim, and this may seem unfair to many.

- The potential for Prevent to be effective

The Prevent strategy has been widely critiqued in terms of whether it can be effective, or even worse, be counter-productive (Saeed and Johnson, 2016). For example: it may make Muslims at university feel isolated and under suspicion; it may inhibit legitimate free speech and drive the consideration and discussion of extremist narratives off campus; and it

1
2
3 may create a climate within which data gathering about individuals can
4 be misused and have undesirable consequences. A number of EU
5 documents have been helpful in identifying the pitfalls that need to be
6 recognised and avoided by recognising the complexities involved in
7 dealing with the pathway from radicalisation to terrorism (European
8 Commission, 2014; OSCE, 2014).
9
10

11
12 A similar argument is developed by Sieckelinck, Kaulingfreks and de
13 Winter (2015) in calling for an education-based rather than a security-
14 based approach to dealing with radicalisation. Their argument is that in
15 the early stages of radicalisation, we are dealing with the development of
16 ideals held by young Muslims concerning their identity and the search for
17 a better life and a better world. The Global jihad is endorsed by its
18 advocates as a way out of the mess that many young Muslims find
19 themselves in – it is the route to a better way of living for themselves and
20 for their fellow Muslims. Once we view radicalisation as involving a
21 battle for ideas, it becomes evident that young Muslims need to be able to
22 discuss such ideas within an educational setting. In a university context
23 this is in line with the frequently expressed view that the best way to deal
24 with extremist ideologies is to confront them through open debate and
25 discussion, rather than to deny them a platform, which would simply
26 allow extremist ideologies to be advocated in private settings off-campus
27 where debate and discussion was not possible. Richardson (2016) has
28 been particularly critical of the conveyor belt theory of terrorism that
29 leads from an initial interest in considering a radical viewpoint at its
30 beginning, to the engagement in terrorist activity at its end. He argues that
31 the notion that there are a number of identifiable steps that leads from one
32 end to the other, and that each step can be viewed by Prevent as a cause
33 for concern is fundamentally flawed and is not supported by research
34 evidence. Thomas (2016) makes the point that the Prevent programme
35 seems to view the involvement of young British Muslims in terrorism as a
36 disease that can be caught, and portrays the process that leads to terrorism
37 as essentially one that involves manipulation and exploitation, and which
38 emphasises the need to disrupt this process through surveillance and
39 interference. In contrast, Thomas argues that what is really needed is
40 education for individual and collective youth resilience against terrorist
41 ideologies through a human rights based approach to citizenship
42 education. As such it seems that the fundamental ideas and methods
43 associated with Prevent do not seem to be those that at least some feel
44 will contribute to the defeat of terrorism.

47
48
49
50
51
52
53
54

- 55
56 • British Values, Citizenship and National Identity
57
58
59
60

1
2
3 What do the above points mean about the fundamental matters of British
4 values? In the guidelines concerning Prevent, the form of extremism that
5 is identified as being of prime concern is described as behaviour which
6 seeks to undermine the British values of toleration and respect for
7 different faiths, democracy, the rule of law, and individual liberty.
8 Moreover, the reaction to the July 2011 bombing in London was
9 intensified by the fact that the bombers were British Citizens.
10
11

12
13 It is evident, however that the description of British values used in the
14 Prevent strategy has been problematic. For example, Ofsted (2016) in its
15 report of the implementation of Prevent in the further education sector
16 has noted that staff knowledge and understanding of how to promote
17 British Values within the FE sector needed improvement. Moreover,
18 Osler (2016) has argued that the apparent tension between Islam and so-
19 called British values has had numerous consequences for how students
20 may be identified as vulnerable to radicalisation.
21
22
23

24
25 In a review of research on how British Muslim Students' view their
26 identity as both Muslim and British, Gilby *et al.*, (2011) reported that the
27 overwhelming majority of British Muslim university students have no
28 problem in describing themselves as both British and Muslim. However,
29 they also report that British Muslim students are a diverse community,
30 and that they differ in the extent to which they identify with Ummah (the
31 worldwide community of Muslims) and how they view, and contest, the
32 use of terms such as extremism and radicalisation when these are applied
33 to the Muslim community in the UK.
34
35
36

37
38 A study by Ali (2014) looked at how Muslim undergraduate students in
39 the USA view their identity. This study was based on life history
40 interviews with 24 Muslim students studying at four higher education
41 institutions in Southern California. The key theme evident from these
42 interviews was that these students felt the public portrayal of Muslims,
43 particular in the media, focused on Muslims as an undifferentiated group
44 who were capable of acts of terrorism in support of their faith. This was
45 underpinned by a view of Muslims as 'pre-modern' in outlook and
46 values, specifically as anti-rational; socially, culturally, and politically
47 backward; and holding to strongly gendered stereotypes where men are
48 dominant and women are subjugated. Often, in these public portrayals, no
49 distinction was made between American Muslims and the worldwide
50 community of Muslims. Ali reported that these students were concerned
51 that such public portrayals made other students view them as 'the other',
52 emphasised an 'us and them' dichotomy, and moreover made other
53 students fearful and distrustful of them. In the British context Richardson
54
55
56
57
58
59
60

(2016) argues that one aspect of Prevent that has caused a great deal of confusion and distrust has been the accusation that it is policing Britishness. Richardson raises a fundamental issue here: to what extent does being a UK citizen imply the adoption of British values and British Behaviour, and to what extent does any deviation from this by a British Muslim indicate the individual is vulnerable to radicalisation? Moreover, to what extent do we expect 'a good citizen' (Muslim or non-Muslim) to alert the appropriate authorities about any such concerns. Our understanding of the interface between Prevent and notions of Citizenship has been under-theorised, and deserves much more attention.

We thus need to consider how the social, political, and educational context concerning the constructs about Muslims can inform of our understanding of the possible impact of the Prevent strategy on the perceptions held by British Muslim university students' sense of personal and national identity.

Design of the Study

The aim of this study is to explore the perceptions of a sample of British Muslim university students concerning Prevent and its impact on their sense of personal and national identity. The study seeks to address the following four research questions.

1. To what extent are the students aware of the government's Prevent strategy?
2. How do the students think the Prevent strategy will impact on their experience of higher education?
3. What do these students think about the Prevent strategy and its effectiveness in combatting terrorism?
4. Has the Prevent strategy had any influence on their sense of personal and national identity?

A questionnaire was designed drawing on the recent research literature (e.g. Durodie, 2016; Saeed and Johnson, 2016; Thomas, 2016). The questionnaire comprised two questions which asked students to rate their agreement on a five-point Likert scale with a number of statements (see Tables 1 and 2), and 12 open-ended questions, which required the students to report their views on aspects of the four research questions. An online version of the questionnaire was created, and an invitation to

1
2
3 complete the questionnaire was sent to potential participants together
4 with a link to the questionnaire, so that it could be completed online.
5
6

7 We were, in part, exploring in this project the possibility of developing
8 insights into respondents' views by paying attention to their use of
9 language. In describing relevant language features a discourse analytical
10 approach was used following established notions of social construction
11 (Berger & Luckmann, 1967) as methodologically enacted through
12 Discourse Analysis (e.g., Gee, 1999) and, more recently, Discourse
13 Studies (Angermuller et al., 2014). In this approach, language is
14 considered to be the primary vehicle by which meaning, and thus
15 experienced reality, is established: "Language orders our perceptions ...
16 and can be used to construct and create ... diverse social worlds." (Potter
17 & Wetherell, 1987: 1). As a result, texts are treated as practices by which
18 their producers (speakers, writers) collaboratively shape the world
19 together with their interactants (listeners, readers).
20
21
22
23

24
25 Our invitation to participants (including the link to the online survey) was
26 sent to contacts at several universities in England who were asked to
27 forward it to members of the Islamic Society at their university. The first
28 page of the questionnaire included the following statement: "Please only
29 complete this questionnaire if you are a UK citizen and would describe
30 yourself as a British Muslim". An eight week period was allowed for the
31 collection of data. During this period, nine completed questionnaires were
32 received.
33
34
35

36 Our work raised significant issues about the ways in which research may
37 be conducted. Our ethical procedures included a commitment to
38 anonymity, to the declaration of the requirement for us to disclose
39 information if legally obliged to do so, and to highlight the distinction
40 between this academic work about Prevent and the development or
41 implementation of Prevent itself. As part of the research design the
42 electronic identifier of those who completed each questionnaire was
43 blocked, so that we would have no way of knowing at which university
44 each of the respondents was based. It would have been interesting to
45 know more about the number and type of the universities in which
46 respondents were based. There may have been interesting points, for
47 example, about those universities where the ethnic/religious population
48 was more obviously varied than in other universities.
49
50
51
52
53

54 We were surprised and somewhat disappointed by the limited response.
55 Our small sample size (25 people opened the online questionnaire and
56 only 9 completed it) could be due to many factors including
57
58
59
60

1
2
3 'research/feedback' fatigue, the wording of the questions and so on. But
4 we should also consider that the length of time taken to achieve ethical
5 approval meant that the questionnaire was distributed later than originally
6 planned and perhaps not at an optimum point for data collection.
7
8

9
10 We, of course, accept the need in such a controversial field to act with
11 extreme caution. We should not be naïve in our discussion of ethical
12 matters. It is, of course, possible that some of those who opened the
13 questionnaire and perhaps even those who completed it might have not
14 been members of the target group (indeed, it is possible that the project
15 may have been monitored by various groups including those with security
16 responsibilities). More straightforwardly, however, some potential
17 respondents may have been put off by our detailed, explicit declarations
18 regarding our legal responsibilities about disclosure. We informed
19 respondents that:
20
21

22
23 *Please note that if in reply to an open-ended question you*
24 *disclose information where we are under a legal duty to pass*
25 *the information on, we will refer this matter to the appropriate*
26 *university authority, although we will not know who has*
27 *submitted this information.*
28
29

30
31 One Muslim student in the researchers' university suggested that our
32 response rate could have been expected in the light of such a warning.
33
34

35 Our original plans to conduct interviews with a small sample could not
36 take place as we did not know and could not trace who submitted each
37 questionnaire. While fully accepting the need for professionalism we
38 note that this project has allowed us to reflect on the possibilities and
39 limitations of researching important and sensitive matters at a time when
40 increasingly rigorous ethical procedures are required. We may be facing a
41 situation in which those challenges that are most pressing are least
42 researched. The likelihood of policy and practice being based on
43 misunderstandings needs to be recognized.
44
45
46
47
48

49 **Presentation of Results and Initial Analysis**

50
51 All nine respondents were undergraduates.
52
53

54 **Students' Understanding of Prevent**

1
2
3 In response to an open-ended question on their understanding of Prevent,
4 all nine students displayed a general understanding of Prevent. They
5 emphasised that it was designed to prevent radicalisation and extremism.
6 No-one used the word ‘terrorism’ in their reply. This is interesting, in that
7 it suggests that they are aware that Prevent focuses on a pathway that may
8 lead to extremism and radicalisation, prior to the point at which a person
9 directly supports or engages in terrorism itself. One student, however,
10 added that the real agenda of Prevent was to
11
12

13
14
15 *“dismantle the religious and true Islam and favour the watered down*
16 *form of Islam that is agreeable to secular and western liberal ideology”.*
17

18
19 The issue of understanding the nature of the problems that Prevent is
20 designed to address is crucial. Some historians (e.g., Cesarani, 2016)
21 point to the problems that emerge from the toleration of injustice. Crick
22 (2000), the architect of modern citizenship education made a point of
23 emphasising the potentially negatively framed and limited acceptance
24 implied by use of the word ‘toleration’ rather than ‘respect’. These
25 matters are essentially connected to characterizations of procedural
26 values. In other words, the underlying ideas of a social action such as a
27 government policy are given meaning in the form of the transaction that
28 follows. It is this integrated approach of substance and procedure that
29 requires investigation if we are to know what really is meant by
30 ‘toleration’, ‘terrorism’ or any complex and contested linguistically
31 framed idea. At the moment our limited data set suggests that much more
32 work is needed to ensure widespread and complex understanding of
33 Prevent and the problems it seeks to address.
34
35
36
37
38
39
40

41 **The Usefulness and Effectiveness of Prevent**

42
43 The ratings of the nine students to statements on the usefulness of Prevent
44 in dealing with terrorism are shown in table 1. No student agreed it was
45 effective, or will ensure that students are not radicalised. The majority
46 suggested that Prevent does not understand the root causes of terrorism
47 and that more effective strategies could be used. *Our findings suggest that*
48 *the increasing number of voices raised against the idea that Prevent is*
49 *useful or effective should be heeded (e.g. Saeed and Johnson, 2016).*
50 There was some limited agreement that blocking access to certain
51 websites and vetting speakers was effective.
52
53
54
55

56 Table 1: *Do you think Prevent is a useful approach to dealing with*
57 *terrorism?*
58
59
60

	SA	A	N	D	SD
Yes, I think it is effective	0	0	2	4	3
It will ensure students are not radicalised	0	0	0	5	4
It understands the reasons for terrorism and knows how to tackle these	1	0	1	4	3
It will be effective because under Prevent speakers on campus must be vetted before they come to speak	0	2	4	0	3
It will be effective because it ensures that students on campus using university computers cannot access websites that incite terrorism	1	3	1	2	2
It will be effective because it gives universities a guide to recognise behaviour that may raise a serious concern	0	1	3	3	2
It does not understand the root causes of terrorism	3	3	1	1	1
Other more effective strategies could be used	4	5	0	0	0

In response to an open-ended question on the effectiveness of Prevent, a number of critical comments were made. There was a general feeling that Prevent encourages a suspicion of young Muslims and Islamophobia, and that it is clearly focused on Muslims, and not, as stated by the government, on a broad range of groups that might be involved in terrorism. As one student put it:

“Prevent is going about things the wrong way. They need to consult with more Muslims and put in place positive methods of showing students moderate Islam, instead of carrying out a Muslim witch-hunt of sorts and limiting freedom of speech. Also, it so obviously only targets Muslims that for it to state otherwise is laughable. Perhaps also it should look to explain why groups like ISIS are politically motivated with a penchant for violence rather than having anything to do with true Islam.”

The Impact of Prevent on British Muslim Students

These criticisms above are echoed in the ratings of the nine students to the statements shown in table 2.

Table 2: *How much do you agree or disagree with the following statements?*

	SA	A	N	D	SD
Prevent targets only Muslims	5	4	0	0	0
It will curb free speech	3	3	2	1	0
It will make Muslim students feel isolated	5	2	1	1	0
It will make Muslim students feel as if they are under constant watch	4	4	1	0	0
It will discourage Muslim students to go to university	1	2	2	3	1
It will make Muslim students extra vigilant when they speak	5	4	0	0	0
It will ruin the university experience of Muslim students	3	2	3	0	1

As can be seen, there are concerns that Prevent will ruin the university experience of Muslim students, make them feel more isolated and become extra vigilant about what they say, and may even discourage Muslims from going to university. In the open-ended question which followed, a number of points were made about the unfair targeting of those with no association with terrorism. As one student put it:

“The attitude of suspicion towards Muslims means that we are guilty before proved innocent, and a simple misunderstanding on our part / misstep is enough for Prevent to take disproportionate action.”

The students were more specifically asked in an open-ended question to comment on the type of behaviour that might be a serious cause for concern. The responses here were quite varied, and included:

“viewing terrorist sites”

“saying things that are obviously very anti-West”

“talking about controversial topics, i.e. ISIS, Israel/Palestine”.

Our results suggest that the concern that has been raised in literature (e.g., Afzal 2016) about the possibility isolating some students in an unreasonable manner is occurring.

Tackling Extremism

The students were asked in an open-ended question to comment on how universities can best tackle the problem of extremism. The general theme of the responses was to understand the root causes of terrorism, combat stereotypes, and to discredit extremist groups. As one student put it:

1
2
3 *“Learn the causes, get more Muslims involved in the committee, discredit*
4 *the extremist groups, explain how they came about and why they do not*
5 *represent Islam, give students other avenues for pursuing Islamic*
6 *activities i.e. Masjid volunteering, talking to non-Muslims about what*
7 *Islam is.”*
8
9

10
11 One student, however, thought *“it’s not the universities’ job to get*
12 *involved”*.
13

14
15 The points raised earlier in this article about the challenges of introducing
16 Prevent into a context supposedly devoted to open academic enquiry are
17 supported by our data (Durodie, 2016). The students were also asked in
18 an open-ended question to comment on whether Prevent might create
19 problems for all students, not just those of a Muslim background. Most of
20 the students were concerned that it could create divisions between
21 Muslims and Non-Muslims, and a general fear of expressing one’s views
22 when discussing controversial issues.
23
24

25 26 **Identity as a British Muslim** 27

28
29 The students were asked in an open-ended question to comment on
30 whether Prevent had impacted on how they see their identity as a British
31 Muslim. Most felt that it had no negative effect; one student felt it had
32 enhanced their identity. One student felt it required Muslims to be more
33 careful in how they are perceived:
34
35

36
37 *“Yes, have to be careful with the image we show of ourselves, have to be*
38 *sure that no misunderstanding can occur.”*
39

40
41 The point made earlier about the challenges of Prevent in relation to
42 fundamental British values is reinforced here (Richardson, 2016).
43

44
45 The students were also asked in open-ended questions what languages
46 other than English they spoke, whether being able to speak another
47 language may have affected their thinking about their identity, and how
48 they were viewed by other students. Seven of the students spoke another
49 language. The most common languages spoken were Arabic (three cases)
50 and Urdu (two cases). Most students felt that speaking another language
51 had no effect on how they viewed their identity or how others viewed
52 them. In some cases, the effect on themselves was positive in giving them
53 a wider perspective, but in some cases it was viewed negatively, in
54 making you feel you don’t belong. One student put it thus:
55
56
57
58
59
60

1
2
3 *“Depending on the person (how bigoted they are) I would think they*
4 *would start to see me more as the other and not quite ‘one of us’. But this*
5 *would be subconscious and not very deep.”*
6
7

8 The students were also asked in an open-ended question whether Prevent
9 made them feel they did not belong in Britain. Three said Yes, and two
10 students said No. Four students also added comments on this, which
11 focused on the way Prevent has led to Muslims feeling that they are an
12 isolated group who are being monitored. One student put it thus:
13
14

15
16 *“I am British and therefore have as much right to be here as anyone else.*
17 *The idea behind Prevent might have at one point been relevant and useful*
18 *but has now become something people use to single out people with a*
19 *difference in opinion to the traditional white Briton”.*
20
21

22 A final question asked for any other comments. Three students added a
23 final comment. One student described Prevent as “institutionally racist”.
24 The two other students pointed to the need for it to be developed and
25 improved - one student putting it thus:
26
27

28
29 *“It's been poorly carried out (as usual for government schemes).*
30 *Reinvent it and make it more positive and it might actually achieve its*
31 *aims.”*
32
33

34 **Use of Language**

35

36
37 An analysis of the discursive practices used by the students in their
38 responses to the open-ended questions allowed some insight into the way
39 stances towards Prevent were being constructed linguistically.
40
41

42
43 When referring to key concepts, some questionnaire respondents
44 frequently used the same phraseology that is common amongst non-
45 Muslim media and politicians, such as war metaphors (‘combat’, ‘fight’),
46 and terminology such as ‘radicalisation’ and ‘extremism’:
47
48

49
50 *“They try and combat the radicalisation of young Muslims.”*
51

52
53 *“Aims to prevent young Muslims entering and being encouraged to join*
54 *extremist groups, such as ISIS.”*
55

56
57 *“...it's meant to prevent radicalisation.”*
58
59
60

1
2
3 Interestingly, one respondent used the term ‘moderate Islam’:
4

5
6 *“Prevent is going about things the wrong way. They need to consult with*
7 *more Muslims and put in place positive methods of showing students*
8 ***moderate Islam**, instead of carrying out a Muslim witch-hunt of sorts and*
9 *limiting freedom of speech.”* [emphasis added]
10

11
12 According to Manzoor (2015) the term ‘moderate Islam’ is not one that is
13 frequently used in the Muslim community, but has instead been coined by
14 non-Muslim politicians who may conflate religious commitment with
15 inappropriate politically motivated activity. Respondents’ use of
16 reference forms reveals how they choose to position themselves
17 ideologically, that is, as aligning themselves with established narratives
18 or distancing themselves from them. It also shows their embeddedness in
19 existing media discourse. In using existing political terminology the
20 above respondents align on a conceptual level with the authors of
21 Prevent, even if the content of the strategy is being assessed critically. By
22 displaying commonality – a shared language, shared concepts, and shared
23 underlying values – these respondents establish a seemingly mutual basis
24 from which they argue against certain aspects of Prevent. This can be
25 seen explicitly in the following quote, where the government’s own
26 terminology is used in an argument against itself:
27
28

29
30
31
32
33 *“To judge the prevent agenda by the government’s own standards, it’s*
34 *intolerant, Islamophobic [sic] and restricts freedom of speech. ...”*
35

36
37 Other respondents refrain from the established political and media
38 discourse and instead use language that confidently establishes an
39 oppositional stance:
40

41
42 *“dismantle the religious and true Islam and favour the watered down*
43 *form of Islam that is agreeable to secular and western liberal ideology”.*
44

45
46 or:
47

48
49 *“I am a practising and strong Muslim who follows Islam in the pure*
50 *sense. Which prevent targets and this is a top down legislation so it is*
51 *pure institutional racism.”*
52

53
54 In contrast to those comments that terminologically align with Prevent
55 but criticise the way it is being implemented, this stance establishes a
56 fundamental conflict with Prevent’s assumptions and objectives.
57
58
59
60

1
2
3 Related to the way issues and concepts are being referred to is the degree
4 of expressed sentiment over core aspects of Prevent. The majority of
5 respondents refrained from strong affective commitments to their
6 statements and maintained a non-evaluative stance even when expressing
7 an opinion. This is interesting given that the issue at hand is discussed
8 with considerable emotion in the media, and given that the sentiments
9 expressed are clearly strong. In adopting a measured stance, and in doing
10 so in combination with the above-mentioned use of established Prevent
11 terminology, respondents positioned themselves in an objective
12 commentator role. In doing so they adopted the stance of the reasonable
13 non-extremist – a stance which arguably is aligned with the aims of
14 Prevent, but which is being criticised on the content level of the
15 responses. Some respondents did use affect-laden language such as
16 ‘watered down’, ‘witch-hunt’, ‘laughable’, ‘intolerant’, ‘bigoted’,
17 ‘ridiculous’, and ‘institutionally racist’. Again, this use of language
18 presented a stance that was fundamentally and subjectively in conflict
19 with Prevent, rather than being objectively critical.
20
21
22
23
24
25
26
27

28 **Conclusion**

29
30 The findings indicate that the British Muslim students in this small and
31 non-representative sample have a number of concerns regarding Prevent.
32 Our respondents consider that Prevent may have a negative impact on
33 how British Muslim students feel about themselves and how they think
34 others may view them. The size of our sample is too small to allow for
35 generalisable empirical analyses and as such we will in this final section
36 of the article briefly discuss issues that strike us as being potentially
37 significant and may be of interest for the development of future work.
38
39
40
41

42 In bringing together our literature review with our empirical data we wish
43 to highlight several issues. There are perceptions in the literature that
44 Prevent is being characterised as something that is centrally about
45 Muslims who, as a group, are more likely than others to commit terrorist
46 acts. Members of our sample have a general understanding of Prevent,
47 see it being about radicalisation and reject any suggestion that Islam is a
48 threat. There is agreement across our sample that Prevent is not effective
49 and is counter-productive. Indeed it seems to have the potential in their
50 view to go against the essential nature of higher education as an arena for
51 academic enquiry, to damage their position as students in that context,
52 and does not contribute to their pastoral care. In approaches to tackling
53 extremism they are in favour of educational rather than security-based
54 approaches and the effect of Prevent seems likely to make them less
55
56
57
58
59
60

1
2
3 likely to see themselves as British (with perhaps a consequent rejection of
4 the official approach to Fundamental British Values, if not to what those
5 values mean in a more inclusively oriented characterization). Our analysis
6 of data suggests that discourse analysis may be a fruitful approach to
7 research.
8
9

10
11 Our initial analysis has given us the opportunity to think about not just
12 what respondents reported but how their language use allowed them to
13 position themselves more strategically in relation to Prevent. Some
14 students' responses accepted the underlying assumptions of Prevent and
15 by extension, of the survey, and aligned linguistically and conceptually
16 with both. This did not stop them from being very critical; however, they
17 did so by accommodating to the government's and the media's discursive
18 practices with regard to terminology and non-affective language use.
19 Others defied these rules and established an alternative discourse
20 fundamentally opposed to the premises of Prevent and any underlying
21 assumptions. Close attention to the discourse employed by all of those
22 involved in these sensitive discussions allows a much more detailed
23 understanding of the stances and stance-taking strategies that exist. There
24 are also issues for discussion concerning the use of the language of the
25 survey questions. Francis et al., (2009) (as well as many others) argue
26 that language is vital for identity. We would argue that our use of English
27 in our research instrument is appropriate in that we wanted a sample of
28 British Muslim university students. But we are aware that this might not
29 be a sufficiently accessible or fine grained approach. We would be
30 interested to gather data from British Muslims who are speakers of a
31 variety of languages and to explore through careful consideration of a
32 range of issues (e.g. translation, Piazzoli, 2015) what ideas are being
33 expressed. There are here substantive issues about the connections
34 between identities and language and methodological issues about how
35 data are collected and analysed in a diverse society.
36
37
38
39
40
41
42
43

44
45 Given the above challenges it would be encouraging if we were to be able
46 to point to positive developments in education that would allow people
47 better to understand and to act to achieve the good society. There are
48 certainly very complex matters to consider as to whether education about
49 contemporary matters should be cognitive as well as affective,
50 individually as well as collectively oriented and critically or
51 conservatively positioned. Unfortunately, and despite the large body of
52 research and inspection evidence from schools about the value of
53 citizenship education (e.g. Ofsted 2013; Whiteley 2014) there is currently
54 something of a vacuum in educational policy and practice about
55 educating people for understanding and action. In the context of higher
56
57
58
59
60

1
2
3 education our small scale research seems to suggest that there is little
4 taking place other than an attempt to stop (or prevent) bad things
5 happening by drawing negative attention to a group whose members do
6 not see themselves as being guilty of what is feared. There is the
7 opportunity for things to be much more positively and professionally
8 developed. Our sample did not refer to issues about de-radicalization
9 perhaps signalling implicitly that there is some educational space here
10 and most of our sample seemed to be keen to see Prevent being improved
11 and becoming more effective, rather than seeing it as a strategy that
12 should be abandoned. We are tempted to conclude that education is
13 perhaps a better way forward than ‘prevent(ion)’.

Table 1: *Do you think Prevent is a useful approach to dealing with terrorism?*

	SA	A	N	D	SD
Yes, I think it is effective	0	0	2	4	3
It will ensure students are not radicalised	0	0	0	5	4
It understands the reasons for terrorism and knows how to tackle these	1	0	1	4	3
It will be effective because under Prevent speakers on campus must be vetted before they come to speak	0	2	4	0	3
It will be effective because it ensures that students on campus using university computers cannot access websites that incite terrorism	1	3	1	2	2
It will be effective because it gives universities a guide to recognise behaviour that may raise a serious concern	0	1	3	3	2
It does not understand the root causes of terrorism	3	3	1	1	1
Other more effective strategies could be used	4	5	0	0	0

Table 2: *How much do you agree or disagree with the following statements?*

	SA	A	N	D	SD
Prevent targets only Muslims	5	4	0	0	0
It will curb free speech	3	3	2	1	0
It will make Muslim students feel isolated	5	2	1	1	0
It will make Muslim students feel as if they are under constant watch	4	4	1	0	0
It will discourage Muslim students to go to university	1	2	2	3	1
It will make Muslim students extra vigilant when they speak	5	4	0	0	0
It will ruin the university experience of Muslim students	3	2	3	0	1
