14 **Abstract**

15 Drawing on and analyzing existing theoretical and empirical research literature,
16 this chapter explores the relationship between youth engagement and education in
17 England, principally during the period 1998 to 2017. Following some general
18 remarks about the meaning of key terms, there are contextual comments about
19 recent political developments and the history of educational initiatives relevant to
20 youth engagement. The chapter then examines several issues that influence the
21 ways in which young people's engagement is framed. It discusses ways in which
22 a positive relationship between youth engagement and education could be devel-
23 oped and concludes by raising some questions about what work in this area needs
24 to be done.

27 Introduction

28 Drawing on and analyzing existing theoretical and empirical research literature, this
29 chapter explores the relationship between youth engagement and education in
30 England, principally during the period 1998 to 2017. While the importance of
31 youth engagement and education has formed a core part of policy and practice
32 during this period, the relationship is one which has been characterized by different
33 approaches at different times. These differing approaches have frequently been
34 influenced by the particular agendas of key actors – including governments, repre-
35 sentatives of nongovernmental organizations, and schools. In order to provide a
36 foundation for the argument in this chapter, I make some general remarks about the
37 meaning of key terms related to youth engagement, provide some contextual com-
38 ments about recent political developments, and outline the history of educational
39 initiatives relevant to youth engagement. The chapter then examines several issues
40 that influence the ways in which young people's engagement is framed with refer-
41 ences to levels of engagement, styles of engagement, and engines of engagement. I
42 provide an overview of some of the research about young people's engagement in
43 England (in amount and type) and the factors that are seen to be associated with such
44 engagement. It is argued that while there is some clarity in understanding about the
45 extent, nature, and cause of engagement, there are also some indications that
46 research that has led to that understanding has been ignored through a party political
47 process in which ideological considerations are emphasized. Finally, I discuss ways
48 in which a positive relationship between youth engagement and education could be
49 developed and conclude by raising some questions about what work in this area
50 remains to be done.

51 Background: The Meaning of Key Terms

52 In England, since about 2008, there has been less official interest in citizenship education
53 than existed in the previous decade. The central government department responsible for
54 education has devoted less time and energy to citizenship education (the ways in which
55 that has happened and the reasons for it are discussed below). That said, there is
56 nationally and internationally significant work still being done in this area. The contin-
57 ued attention to young people's engagement with citizenship beyond official policies
58 may be seen in initiatives taken by international bodies (e.g., Carnegie – see <http://carnegieendowment.org/specialprojects/civicsresearchnetwork/>), academia with recent
59 issues of the journals *Citizenship Teaching and Learning* (Sears 2017), and the *Journal*
60 of *Social Science Education* (Davies et al. 2014), and new networks (e.g., Partispace, see
61 <http://partispace.eu/>). These various activities, in some ways, relate very positively to
62 earlier government policy developments that were aimed at developing active citizen-
63 ship (e.g., DfEE/QCA 1998 and <http://www.parliament.uk/citizenship-civic-engagement>). However, it should be noted that much of the work in citizenship education
64 and, more precisely, education that encourages understanding of contemporary society
65

67 and engagement in it, remains contested and controversial in England, as elsewhere. As
68 such, it is necessary to clarify the meaning of key terms.

69 The quotation below gives an overarching sense of what is involved when
70 engagement in contemporary society is referred to. According to Marquand
71 (2004), engagement is:

72 ...a dimension of social life, with its own norms and decision rules... a set of activities, which
73 can be (and historically has been) carried out by private individuals, private charities and
74 even private firms as well as public agencies. It is symbiotically linked to the notion of public
75 interest, in principle distinct from private interests; central to it are the values of citizenship,
76 equity and service...It is ... a space for forms of human flourishing which cannot be bought in
77 the market place or found in the tight-knit community of the clan or family. (p. 27)

78 Therefore, in short, engagement in general terms means participating in one's
79 social communities beyond the immediate family. Of course, further clarification is
80 needed about many things including, referring to the above quotation, the distinc-
81 tions to be made between "public" and "private," and the meaning of "social life." It
82 would be unwise to suggest that engagement does not occur within family or other
83 personal groups and indeed those contexts are often the places where identity is
84 given clearest expression through power-related interpersonal action.

85 One of the principal debates about the meaning of engagement is focused on
86 location. In other words, there are questions about where one may take part, and,
87 more generally, this raises issues about the boundaries between legally framed
88 characterizations of engagement and affectively oriented perceptions of thinking
89 and action. Some academics, such as Tarrow (2005), emphasize the significance of
90 transnationalism, whereas Crick (2000, pp. 136, 137), for example, cites Hannah,
91 Arendt, to assert that "a citizen is by definition a citizen among citizens of a country
92 among countries." Furthermore, there are many contemporary contexts (e.g., Cata-
93 lonia; Corsica) in which it is hard to identify the preferred formulation of the country
94 in which one may take part. Indeed, such formulations are not always fixed, as the
95 2014 referendum on Scottish independence and continuing discussion about the
96 border between Northern Ireland and Eire shows within the UK context.

97 In reference to citizenship and engagement, these arguments about the role of
98 place connect with discussions about the degree to which pluralistic societal coher-
99 ence may be achieved. Much of the debate which manifested in educational policy
100 documents about young people's engagement in England since the late 1990s has
101 focused on engendering a sense of togetherness through:

102 a society in which there is a *common vision* and *sense of belonging* by all communities; a
103 society in which the diversity of people's backgrounds and circumstances is appreciated and
104 valued; a society in which similar life opportunities are available to all; and a society in
105 which strong and positive relationships exist and continue to be developed in the workplace,
106 in schools and in the wider community. (DCSF 2007, p. 3)

107 This said, some of these overarching goals as stated in policy documents tend to
108 hide the different meanings of community within which engagement may occur.
109 Annette, for example, has pointed to the different meanings of community:

110 as a place or neighbourhood ... as a normative ideal linked to respect, inclusion and
111 solidarity ... as something based on a politics of identity and recognition of difference ...
112 as a political ideal linked to participation, involvement and citizenship. (2003, p. 140)

113 It is important to recognize these different meanings in order to be able to make
114 judgments about what sort of fundamental issues are at stake. Heater (1999, p. 77),
115 for example, has explained that certain characterizations of community can mean
116 something that is very challenging:

117 Communitarianism extracts from the republican tradition the concentration on a feeling of
118 community and a sense of duty, though omitting from its programme the strand of direct
119 political participation and, some would argue, crucially, the central republican concern for
120 freedom.

121 Of particular significance to my view of engagement are *political* issues. In this
122 regard, the following definition can be viewed as particularly apt: "Youth activism
123 refers to behaviour performed by adolescents and young adults with a political
124 intent" Hart and Linkin Gullan (2010, p. 67). In order for the connection between
125 youth activism and the political sphere/discourse to be considered meaningfully
126 there is a need to give a fairly simple – but nevertheless dynamic – characterization
127 of the terms "politics" and "citizens":

128 Politics then can simply be defined as the activity by which differing interests within a given
129 unit of rule are conciliated by giving them a share in power in proportion to their importance
130 to the welfare and the survival of the whole community. (Crick 1964 p. 21)

131 Citizens may be described in the following terms:

132 Individuals are citizens when they practise civic virtue and good citizenship, enjoy but do not
133 exploit their civil and political rights, contribute to and receive social and economic benefits
134 do not allow any sense of national identity to justify discrimination or stereotyping of others,
135 experiences senses of non –exclusive multiple citizenship and, by their example, teach
136 citizenship to others. (Heater and Oliver 1994, p. 6)

AU4

137 A focus on politics allows for engagement to be centrally about power, to
138 recognize the primacy of the individual in human rights discourses, to see the vital
139 importance of groups acting in a range (geographically based and other) of diverse
140 communities, to value the rights and responsibilities of a legally framed status of
141 citizenship and to embrace the dynamism offered by considerations of politics in
142 everyday contexts. The focus on politics allows for a helpfully precise characteriza-
143 tion of what I think is important in engagement. Moreover, the risk of embracing too
144 many things and achieving only a rather woolly sense of what engagement means

AU3

145 might well be avoided by interpreting all that we do through the lens of the
146 fundamental concepts of politics.

147 **Background: The English Political Context**

148 In the UK, successive Prime Ministers have consistently argued for young people to
149 engage in society. (In the United Kingdom, certain legislative powers remain with
150 the central UK Parliament, while others – such as education – are devolved to the
151 Scottish Parliament, Welsh Assembly, and Northern Ireland. On these devolved
152 powers, the central UK Parliament legislates for England.) During his period in
153 office, Labour Prime Minister, Tony Blair (1997–2007), was committed to what he
154 considered a communitarian approach. Broadly, this approach consisted of the
155 attempt to steer a middle course between the excesses of both unfettered neoliberalism,
156 with its commitment to solving everything through market forces, and certain
157 forms of socialism in which opportunities for individual or private group-based
158 activity were not encouraged or allowed. In this approach, Blair was influenced by
159 sociologists, including Giddens (2000) and Etzioni (1995), who had also influenced
160 other politicians including Clinton in the USA. A commitment to youth engagement
161 and activism was also explicitly stated by Blair's successor as Labour Prime
162 Minister, Gordon Brown (2007–2010), who argued that:

163 It is my ambition to create a country in which there is a clear expectation that all young
164 people will undertake some service to their community, and where community service will
165 become normal part of growing up. (Brown 2009)

166 Leader of the Conservative-Liberal Democrat Coalition (2010–2015) and Con-
167 servative (2015–2016) governments, Prime Minister David Cameron seemed to
168 continue, broadly, this approach, creating the *National Citizen Service* and also
169 focusing on what he called “the Big Society” which, in part, was designed to engage
170 people in their communities. According to Cameron:

171 The Big Society is about a huge culture change, where people, in their everyday lives, in
172 their homes, in their neighbourhoods, in their workplace, don't always turn to officials, local
173 authorities or central government for answers to the problems they face, but instead feel both
174 free and powerful enough to help themselves and their own communities. (Cameron 2010)

175 It is possible that the intention for the Big Society was for citizens to feel free,
176 able, and empowered to help their communities, but the Big Society also linked to
177 the desire for a healthy economy (in that engaged people create wealth). The nature
178 of the desired enterprise was of a particular type, while the sort of action Cameron
179 was looking for was driven by certain agendas which had their limits. One agenda
180 can be seen, for example, in certain reactions to the 2011 riots in English cities, as the
181 following critique highlights:

AU5

182 Mr Cameron will also blame “children without fathers; schools without discipline; reward
183 without effort; crime without punishment; rights without responsibilities; communities
184 without control”.

185 Mending that “broken society”, Mr Cameron will say, is his fundamental aim in politics.
186 (Kirkup et al. 2011)

187 The above indicates some of the challenges of, and different ways of framing,
188 arguments for engagement. Successive governments in England have wanted to
189 promote particular sorts of engagement that emerge from particular ideological
190 perspectives. As has been suggested above, a broad-based communitarian agenda
191 shaped the desire for youth engagement under Blair and Brown, but after the General
192 Election of 2010, the agenda became more precisely focused on a political project in
193 which young people’s action that was not contributing to established norms was not
194 accepted.

195 The current Prime Minister (January 2018) Theresa May, while opposing votes at
196 16, is also in favor of the more limited form of youth engagement which has framed
197 government discourse since 2010:

198 people can get engaged in politics in a whole variety of ways and I would encourage young
199 people to do so.

200 I think it is important young people watch politics, pay attention to politics, get to think
201 about their own views and where possible start to get involved. (Stone 2017)

202 The hesitation and caution of May in suggesting young people think about things
203 and “where possible start to get involved” mean that low-level traditionally framed
204 actions to support established systems and processes are being promoted. The
205 government’s position here is not an open-ended commitment to democratic engage-
206 ment. One of the most obvious ways in which the more limited commitment to youth
207 engagement can be seen is to consider politicians’ actions about perceived radical-
208 ism. It is likely that the determination to achieve youth engagement in a society in
209 which law and order is emphasized is connected to fears about the rise of perceived
210 radical groups (Kyriacou et al. 2017). The complex relationship between engaged,
211 cohesive, and inclusive democracy and attempts to achieve more precisely focused
212 predetermined “good” actions is thrown sharply into relief by the above. While it
213 would be naïve and simplistic to suggest that there are unsophisticated divisions
214 between conservative and radical conceptions of engagement, what is evident from
215 official sources in recent years is an emphasis on what is deemed as good behavior
216 and an absence of encouragement for critique. Furthermore, unwanted behavior in
217 the form of radicalization has been presented principally, and overly narrowly, as a
218 concern with certain groups in society – particularly Muslims (Qurashi 2016).

219 The financial crisis since 2008 has been significant for changing attitudes and
220 opportunities, and this has been particularly noticeable in European matters. Hoskins
221 and Kerr (2012) note that:

222 the global economic and financial crisis . . . has been allied with a change in the political
223 philosophy of governments across Europe in the past few years. This has seen more

224 governments favouring support for community activity, as opposed to conventional political
225 participation, with a smaller perceived role for government in society overall. The combined
226 consequence of the economic crisis and the smaller perceived role of the state have meant
227 that the field of Participatory Citizenship has fallen from prominence as a policy priority at
228 national and local level and, as a consequence, there has been much less funding for the
229 whole domain including through national, local and private sector contributions. The strains
230 of the cuts in funding have been noted within civil society across Europe and at the European
231 level. (p. 8)

232 A significant feature of the current political landscape in England relates to the
233 departure of the UK from the European Union. The sort of transnational citizenship
234 that was narrowly rejected by voters in the 2016 referendum on membership of the
235 European Union probably occurred in light of fears about migrants taking jobs and
236 putting pressure on public services, as well as an attempt to take back control in a
237 context where there was anger expressed against elites (see <https://ec.europa.eu/epale/en/blog/brexit-and-its-implications-citizenship-education-across-europe>). The
238 populism that fed the Brexit campaign is, of course, clear evidence of a sort of
239 engagement. And that campaign took place in the context of negative attitudes
240 towards immigrants:

242 Existing evidence clearly shows high levels of opposition to immigration in the UK. In
243 recent surveys, majorities of respondents think that there are too many migrants, that fewer
244 migrants should be let in to the country, and that legal restrictions on immigration should be
245 tighter. (Blinder and Allen 2016, p. 4)

246 The 31st NatCen Social Research British Social Attitudes survey was reported as
247 indicating that “British attitudes harden towards immigrants” (<https://www.theguardian.com/uk-news/2014/jun/17/immigration-british-attitudes-harden-benefits>)
248 and the campaign itself saw allegations of xenophobia in, for example, the activities of
249 the UK Independence Party and the murder of a member of parliament by a member
250 of an extreme right wing group. This general picture is not necessarily to suggest that
251 young people hold such views and take such actions. The fact that 71% of young
252 people aged 18–25 in the UK voted to remain in the EU is perhaps an indication, first,
253 of divisions in society and, second, about differences concerning to what outcomes
254 societal engagement should lead.

256 **Youth Activism in England: The Educational Context**

257 Within England there have been many attempts historically to align youth engage-
258 ment with their formal education. For example, the work of Henry Morris in the
259 Cambridgeshire village colleges in the 1930s, the work of Leicestershire Community
260 Colleges, and Eric Midwinter’s and others efforts to establish urban community
261 schools, all illustrate an approach to education in which engagement in communities
262 was promoted.

263 The types of education explicitly relevant to youth activism and engagement have
264 seen extreme variations. The general neglect of an explicit approach prior to the
265 1960s was followed in the 1970s by an emphasis on political literacy (skills and
266 issues about politics in everyday life), a string of educations about and for peace, the
267 globe, anti-sexism, anti-racism, and so on in the 1980s and promotions of youth
268 volunteering in the early 1990s. The highly influential Final Report of the Advisory
269 Group on Education for Citizenship and the Teaching of Democracy in Schools
270 (known commonly as the Crick Report, 1998) which led to the statutory inclusion of
271 Citizenship education in the National Curriculum for secondary (11–16-year olds)
272 schools emphasized social and moral responsibility, political literacy, and commu-
273 nity involvement. From 2010, there has been a return to civics, financial literacy,
274 volunteering, and character in government discourses and policies on youth
275 engagement.

276 Legislation has been passed to ensure that a version of professionally responsible
277 engagement is maintained. Sections 406 and 407 of the 1996 Education Act insist on
278 the duty to secure balanced treatment of political issues. The Equality Act 2010
279 Advice for Schools and the Prevent Strategy (June 2011) (which sees British values
280 as democracy; the rule of law; individual liberty and mutual respect; tolerance of
281 those with different faiths and beliefs) are relevant. An official document on Pro-
282 moting fundamental British values as part of spiritual, moral, social, and cultural
283 education in schools (DfE 2014), as well as the School Inspection Handbook (Ofsted
284 January 2015) carry significant guidance for schools and teachers. Teachers are
285 required to insist on the sort of engagement that has been explained above: an
286 opposition to perceived radicalization and a commitment to young people starting
287 to get involved in a context which is influenced by anti-immigrant views.

288 Citizenship education is currently, in early 2018, part of the National Curriculum
289 but there have been very recent dramatic changes. Up to 2014, there was a strong
290 conceptual core (democracy and justice; rights and responsibilities; identities and
291 diversity). The work was inspired by political literacy, emphasizing communities at
292 local, national, and global levels and which is contemporary, public, participative,
293 and reflective. The current National Curriculum for Citizenship (since September
294 2014) emphasizes civics (knowledge of constitutional politics and the legal system),
295 volunteering, and personal money management together with a nonstatutory char-
296 acter education that highlights perseverance, resilience, and grit. This emphasis on
297 character, which has been explored by Kisby (2017), may be part of a
298 neo-conservative moral agenda. While character education may have positive poten-
299 tial, there are reservations about its nature which are acknowledged in attempted
300 rebuttals by its proponents (e.g., Kristjansson 2013). This moral agenda may also be
301 connected with adult fear of young people (Halsey and White 2008). In addition, it
302 has been argued on the basis of empirical research that increasing levels of mental
303 health issues following the 2008 recession may make engagement more difficult
304 (Katikireddi et al. 2017).

AU6

305 **Levels, Styles and Engines of Engagement**

306 The need to understand engagement (its levels and styles) is the subject of wide
307 ranging debate, with many academics coining phrases and framing characterizations.
308 Fallahzadeh (2016) has summarized a range of work such as “mundane citizenship”
309 (Bakardjieva 2012), “self-actualizing citizen” (Bennett et al. 2011), “networking
310 citizen” (Loader et al. 2014), “critical citizen” (Norris 1999), and “everyday-maker”
311 (Bang and Sorensen 1999). These formulations are placed against overarching
312 characterizations of engagement which make use of, for example, models of micro
313 and macro participation. The micro emerges from the relationship between individ-
314 ual citizens and the state in which, for example, engagement would be revealed by an
315 individual parent approaching a teacher to request (or demand) help for their own
316 child. The macro includes collective action, such as voting and trade union or
317 pressure group activity. Either implicitly or explicitly, these models may connect
318 with bonding capital (i.e., people with similar characteristics) and bridging capital
319 (i.e., people with different characteristics) in the interests of promoting engagement.

320 It is not straightforward to identify the level of youth engagement in terms of civic
321 action that is taking place. In part, this is because there is developmental discontin-
322 uity rather than a clear and simple process as people age (Sherrod et al. 2010). In
323 other words, the nature of engagement may develop variously, and the meanings,
324 interpretations, and perceptions about engagement may shift. There are also hard to
325 interpret differences between people’s social capital. It has been argued that young
326 people from lower socioeconomic backgrounds are less likely than others to engage
327 in certain forms of civic action (Andrews 2009). Those with low levels of social
328 capital are less likely than others to engage in established associational activity. High
329 status charitable bodies, for example, may not be approached by young, working
330 class men and women from some ethnic groups. Cremin et al. (2009) have empha-
331 sized the key determinant of engagement as being “whether or not the young person
332 has the knowledge, networks, and skills to be able to act upon a civic issue of
333 concern”.

334 Of perhaps greater significance than the challenges of identifying clear patterns of
335 engagement is the issue of the characterization of engagement itself. Many surveys
336 take fairly crude measurements of engagement to indicate that approximately half or
337 more of young people have experience of volunteering (see Davies et al. 2013 for a
338 fuller exploration). However, this may include involvement in sports and exercise,
339 hobbies and recreation, youth and children’s services, and health and social welfare,
340 which may be regarded as not fitting easily alongside the political essence of civic
341 engagement. Nevertheless, using a broad interpretation of engagement, there are
342 positive indicators:

343 many young people of all types and backgrounds are involved in informal voluntary and
344 community action. Studies show around three quarters of young people have been involved
345 in ‘constructive social participation’ through community networks, neighbourliness,
346 campaigning or informal political action. (Gaskin 2004, p. iv)

347 And even when these activities are described with a little more precision, there
348 exist some encouraging data for those who think that levels of youth engagement are
349 positive, including that “42% of young people aged between 10 and 20 years
350 participated in ‘meaningful social action’ in the UK – this is slightly broader than
351 volunteering” (<http://www.ivr.org.uk/ivr-volunteering-stats/177-how-many-young-people-volunteer>, accessed 11 September 2016). However, perhaps the key chal-
352 lenge is to interpret these statements by knowing more precisely what is meant by
353 “engagement,” “volunteering,” and “meaningful social action.” Perhaps, depending
354 on one’s definition and preferred measurements, it is almost impossible not to engage
355 in society. If that is the case, then survey data about engagement may merely indicate
356 levels of acceptable, or social class defined, involvement. The possibility thus exists
357 of unhelpful circularity in an exclusionary process (where, for example, working
358 class people cannot be engaged in “real” activity). As such, when connections are
359 made between engagement and health, life satisfaction and educational level, this
360 may only be deemed to be a reasonable interpretation when engagement is seen as
361 the effect of positive lifestyle rather than the cause.

362 What facilitates participation for young people in England? In addition to those
363 factors already referred to above (perhaps especially distribution of social capital),
364 evidence suggests that there are broad engines of engagement. There are general
365 societal factors that help or hinder engagement. In their work outside the English
366 context, but which is highly apt to it, Amnå and Zetterberg (2010) argue that there
367 are various perspectives on what promotes involvement including modernization
368 (as people become better off, they want more of a say in public affairs); the public
369 institutional hypothesis (the design and performance of democratic systems may
370 facilitate or hinder engagement); the social capital hypothesis (the connections
371 between individuals facilitate or hinder engagement); and civic volunteerism (the
372 resources – especially time and money – available to people determine their capacity
373 to engage). Within these perspectives, there are significant trends that may explain
374 engagement. For example, consumerism (including decisions to buy or not buy
375 certain products and although dismissed by some as mere “clicktivism,” e.g.,
376 <https://www.theguardian.com/society/2014/sep/24/clicktivism-changed-political-campaigns-38-degrees-change>) may be one of the major ways in which public
377 expression occurs, and there are many NGOs which deliberately emphasize this
378 approach.

379 Engagement may emerge not from broad societal factors as above but in relation
380 to the possibility of personality traits and emotion. In this sense, it is possible we
381 have moved some way from resource mobilization theories in which money, com-
382 munications, and public support are seen as key factors. Emotion in the identification
383 of common enemies; establishment of personal relationships; and performance of
384 group rituals are seen as significant (Edwards 2014). Russo and Amnå (2016)
385 identify different personality traits and relate them to the likelihood of engagement.
386 Briefly, and not necessarily applied to people in England, those who are agreeable
387 and conscientious are perhaps less likely to take political action than those who are
388 extravert and open to experience.

391 Several research projects including the National Foundation for Educational
392 Research's Citizenship Education Longitudinal Study (see [https://www.nfer.ac.uk/
393 research/projects/cels/](https://www.nfer.ac.uk/research/projects/cels/)) suggest that practical factors may be significant for individ-
394 ual and group engagement. These include, peer group advocacy, publicizing oppor-
395 tunities, an inclusive ethos, a welcoming physical environment, a willingness to deal
396 realistically and honestly with issues that affect individuals and communities in
397 contemporary society. In addition, youth workers who use high-level interpersonal
398 skills to create a positive process of participation and maintaining realistic commit-
399 ments for young people and the adults who work with them may determine the
400 nature and amount of young people's engagement. There are mixed reactions to the
401 motivational force of rewards (certificates, academic credit, work experience, salary,
402 etc.), but it would seem potentially naively idealistic to ignore these matters (Davies
403 et al. 2013).

404 For individual action there may be a range of facilitators. There are many (e.g.,
405 Byram 2008) who focus on the achievement of language as an essential indicator not
406 only of identification but also of likely action. Acquiring language aids the func-
407 tional aspects of citizenship (completing tax returns is perhaps a rather mundane
408 example). It affects identity (it may be the case that I am what and how I speak), and
409 it has a powerful impact on skills and dispositions (advocacy and representation are
410 just some of the things that are achieved through language). The Linguistic Ethnog-
411 raphy Forum (see <http://lingethnog.org/>) is devoted to exploring these issues. These
412 issues and possible processes and outcomes about language have particular explicit
413 resonance in diverse communities (e.g., see Szczepk et al. 2016) but are important
414 in all communities insofar as language has instrumental value, is an aspect of culture
415 into which and through which people are socialized, and is a form of social contract
416 in which there are opportunities for democratic or other types of dialogue.

417 Social media are seen as having huge potential, but this is contested. There may
418 be reservations about the positive potential for youth engagement (e.g., see Davies
419 et al. 2012). Social media may not be available to all. Furthermore, it may be used in
420 ways congruent with the development of democracy which may lead only to an
421 emphasis on traditional teaching and learning styles. Despite the claims associated
422 with social media use, there are strong critical accounts of what is happening to
423 youth engagement as a result of new technology with some suggesting that less
424 rather than more democracy is likely (e.g., Taplin 2017). Even in the context of
425 widespread use, it is not apparent that the amount of usage is sufficient for social
426 media to impact for all on global citizenship education. Therefore, there remains
427 lingering questions regarding the ways in which social media are used as they may
428 not necessarily be aligned with democratic citizenship and its educational potential is
429 at the very least under-developed (Davies and Sant 2014).

430 Perhaps the most traditional form of civic engagement is voting. There have for
431 many years been concerns expressed at low youth turnout at general elections. The
432 debate in England has focused in recent years around the merits of allowing voting at
433 16. There is uncertainty about the wisdom of lowering the voting age (Stone 2017).
434 Some feel that in relation to attempts to increasing turnout young people may "grow
435 into" voting and that, in any case, not voting does not necessarily imply

436 disengagement. Politicians may want young people to vote to secure short-term
437 electoral advantage (and to weaken young people's rights to receive state support).
438 There may be a novelty value that would soon disappear (increases in turnout have
439 been followed by decreases in, for example, the Isle of Man and Austria). Voting at
440 16 in light of rights held by young people in other spheres is seen by some as a
441 spurious argument. For example, Russell (2014) sees those rights as "minimal,
442 irrelevant, and diminishing," and he also claims that comparing young people in
443 this context with women's campaigns for the vote or referring to changes to lifestyle
444 regulation is inappropriate. What, however, seems clear is that the context for
445 engagement is influenced by discussions over voting.

446 **Making Explicit Connections Between Education and Youth 447 Engagement**

448 In general terms, there has been a strong connection made between education and an
449 enriched civic culture. In their classic work that has been generally influential in
450 many countries, Almond and Verba (1989 [1963]) suggest that:

451 educational attainment appears to have the most important demographic effect on political
452 attitudes. Among the demographic variables usually investigated – sex, place of residence,
453 occupation, income, age, and so on – none compares with the educational variable in the
454 extent to which it seems to determine political attitudes. The uneducated man or the man
455 with the limited education is a different political actor from the man who has achieved a
456 higher level of education. (pp. 315–316)

457 There are distinctions regarding levels of education in relation to civic participation.
458 Campbell (2009) argues that an absolute level of one's own education (in other
459 words, the value of education itself and not compared with that achieved by others)
460 is relevant to membership in voluntary associations, institutional trust, and voting.
461 But sorting (one's educational position relative to others) may also be important and
462 when education is, at least in part, a status symbol this may be relevant to societies
463 which experience political conflict. A cumulative effect (i.e., increases in the average
464 level of education) is good for interpersonal trust and as a result a wide-based
465 engagement may develop. Beyond these general considerations, there has been a
466 large amount of research in England (complementing international studies) that
467 make a clear connection between certain types of citizenship education and engagement
468 (e.g.,  2010). Whiteley's (2013) research, for example, shows that:

469 citizenship education had a positive impact on three key components of civic engagement:
470 efficacy, political participation and political knowledge. This . . . is likely to help offset some
471 of the trends in civic participation among young people which have shown a sharp decline in
472 key activities like voting and voluntary activities over time. (p. 1)

473 Generally, education occurs when the two tenets of constructivism are met:
474 "learning as an active process of constructing knowledge rather than [only] acquiring

475 it; and instruction is a process that involves supporting that construction rather than
476 of [only] communicating knowledge" (Duffy and Cunningham 1996, p. 171). In
477 order to apply that general insight to specific ideas and issues about citizenship
478 education, it is interesting to look at research from the National Foundation for
479 Education Research (<https://www.nfer.ac.uk/research/projects/cels/>) and reports
480 from the Office for standards in education (OfSTED) (<https://www.gov.uk/government/publications/citizenship-consolidated-a-survey-of-citizenship-in-schools>).
481 Those reports suggest that effective citizenship education will be achieved by
482 establishing a clear rationale and characterization of educational engagement widely
483 understood by "teachers" and "learners," through explicit and focused consideration
484 of key concepts, with recognition that certain areas (government, politics, and voting
485 as well as diversity, identity, and global issues) present difficulties for teachers and
486 learners, and with an appreciation that while assessment is difficult, good work may
487 be achieved through open discussion in a positive educational "climate." There is
488 less research on nonformal or informal forms of education for engagement but these
489 surely are very relevant and worthy of further research. This means that despite all
490 the very many debates in this field, we actually already know what to do and what
491 not to do: education for engagement should not be narrowly academic, left to chance
492 or constructed narrowly around morality (in the form of character education) or law
493 (in the form of civics).

495 Conclusion

496 As in other countries, there are significant concerns and challenges about youth
497 engagement and education in the English context. These challenges and concerns are
498 long-standing. Since 2010 – a period which has witnessed the effects of the global
499 financial crisis; General Elections in 2010, 2015, and 2017; and referenda about
500 Scottish independence (2014) and membership of the European Union (2016) –
501 England has experienced something of a revolution in education. Schools are now
502 less supported by local government, have greater autonomy (e.g., most schools are
503 now not required to follow the National Curriculum), and typically focus on a
504 limited number of centrally imposed targets (principally maths, English, and science
505 rather than citizenship). Officially, there is a perceived need for civic knowledge,
506 greater discipline, and increased individual volunteering. Research and evidence
507 from the schools' inspectorate about the value of citizenship education for civic
508 engagement has been rejected by the government. Although the House of Lords is
509 currently looking into the possibilities of reviving the educational focus on civic
510 engagement (see <http://www.parliament.uk/citizenship-civic-engagement>), it is
511 unfortunate that citizenship education in England has been characterized as being
512 party political – essentially Labour Party – property and it is unlikely currently to
513 regain its former prominent position.

514 The difficulties in the policy context for connecting education and civic engage-
515 ment are significant. In many ways, England is witnessing a return to the period in
516 the mid-1990s before the Crick Report when much of the key work was left to

517 interested professional and funding bodies and individual academics. But that does
518 not mean that little work is taking place. Internationally, the Council of Europe, the
519 Carnegie Endowment for International Peace ([http://carnegieendowment.org/
520 specialprojects/civicresearchnetwork/](http://carnegieendowment.org/specialprojects/civicresearchnetwork/)), and Leverhulme (as evidenced by their sup-
521 port for the project referred to in the acknowledgements below of this chapter) are
522 promoting relevant work. There is a wealth of work in several countries taking place
523 in which efforts are being made to understand the nature and types of engagement
524 and their links with education. For example, Johnson and Morris (2010), Westheimer
525 and Kahne (2004), and Veugelers (2007) divide citizens into the adapting citizen, the
526 individualistic and/or the critical democratic citizen. There is exploration of the ways
527 in which "new" technology may be shaped to provide the opportunities to move
528 from the dutiful citizen to the self-actualizing citizen (Bennett 2008). In such a
529 complex and contested field, interested parties need to continue to work to be clear
530 about the meaning of key terms (while allowing for dynamic and flexible work). In
531 addition, there is a need to pay attention to the context in which work takes place in
532 order to review what seems to be relevant to the levels and types of engagement by
533 young people and to see what is being done educationally, formally, and otherwise.
