## 2 SANS data and fits for thermal and temporal study on rr-P3HT nanowires

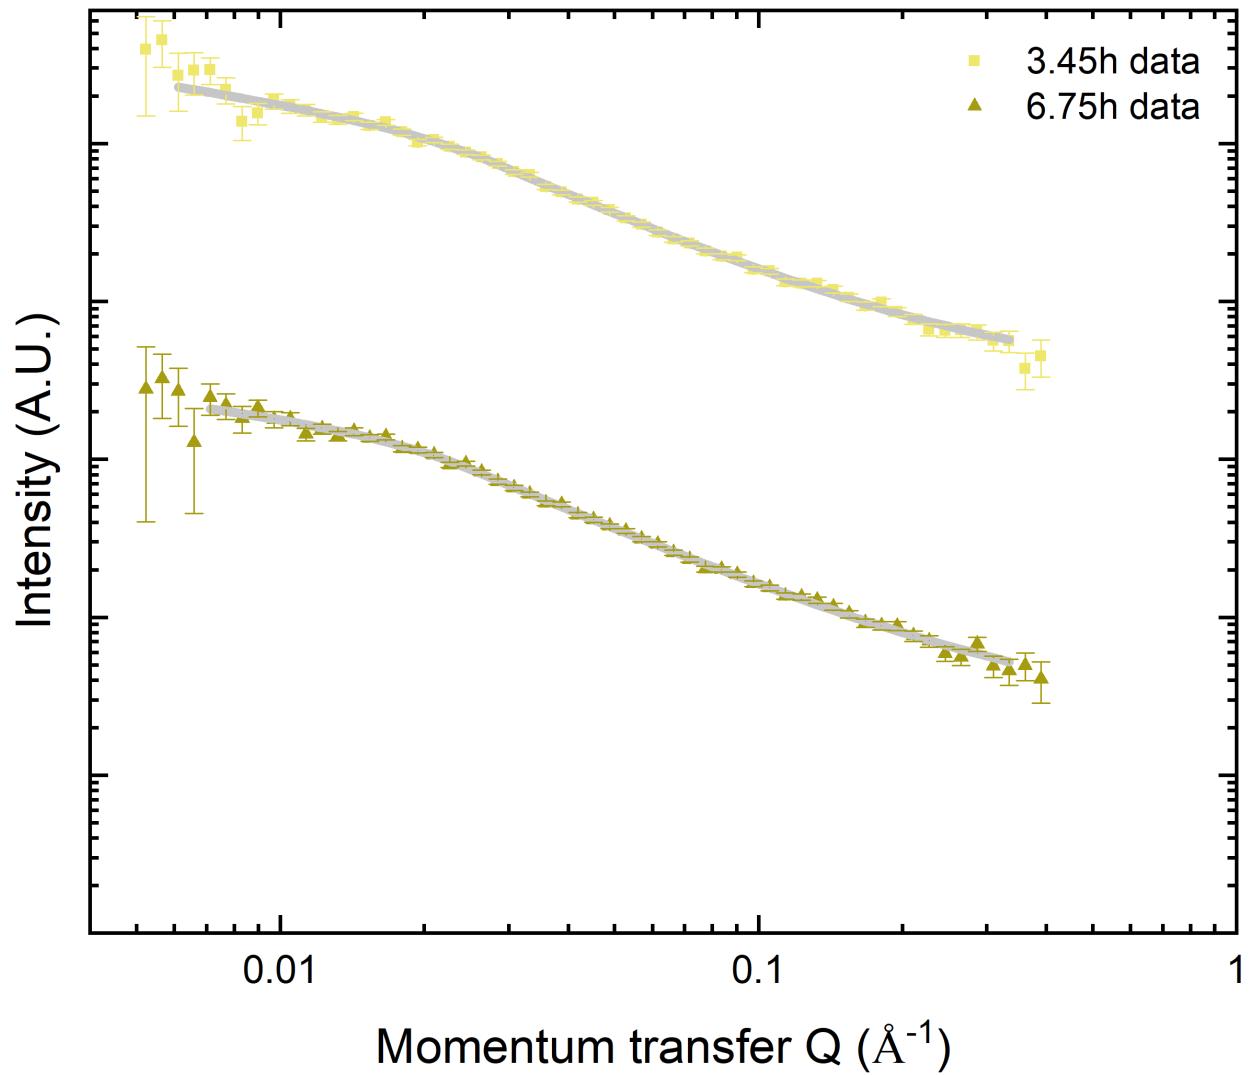

Figure S1: **SANS of P3HT solution part 1.** SANS data and their corresponding fits (gray) of the 5mg/mL rr-P3HT solution after 3.45 hours (light yellow), and 6.75 hours (ochre) at 74.8°C. The two measurements are shown offset by two decades from each other to enable comparison.

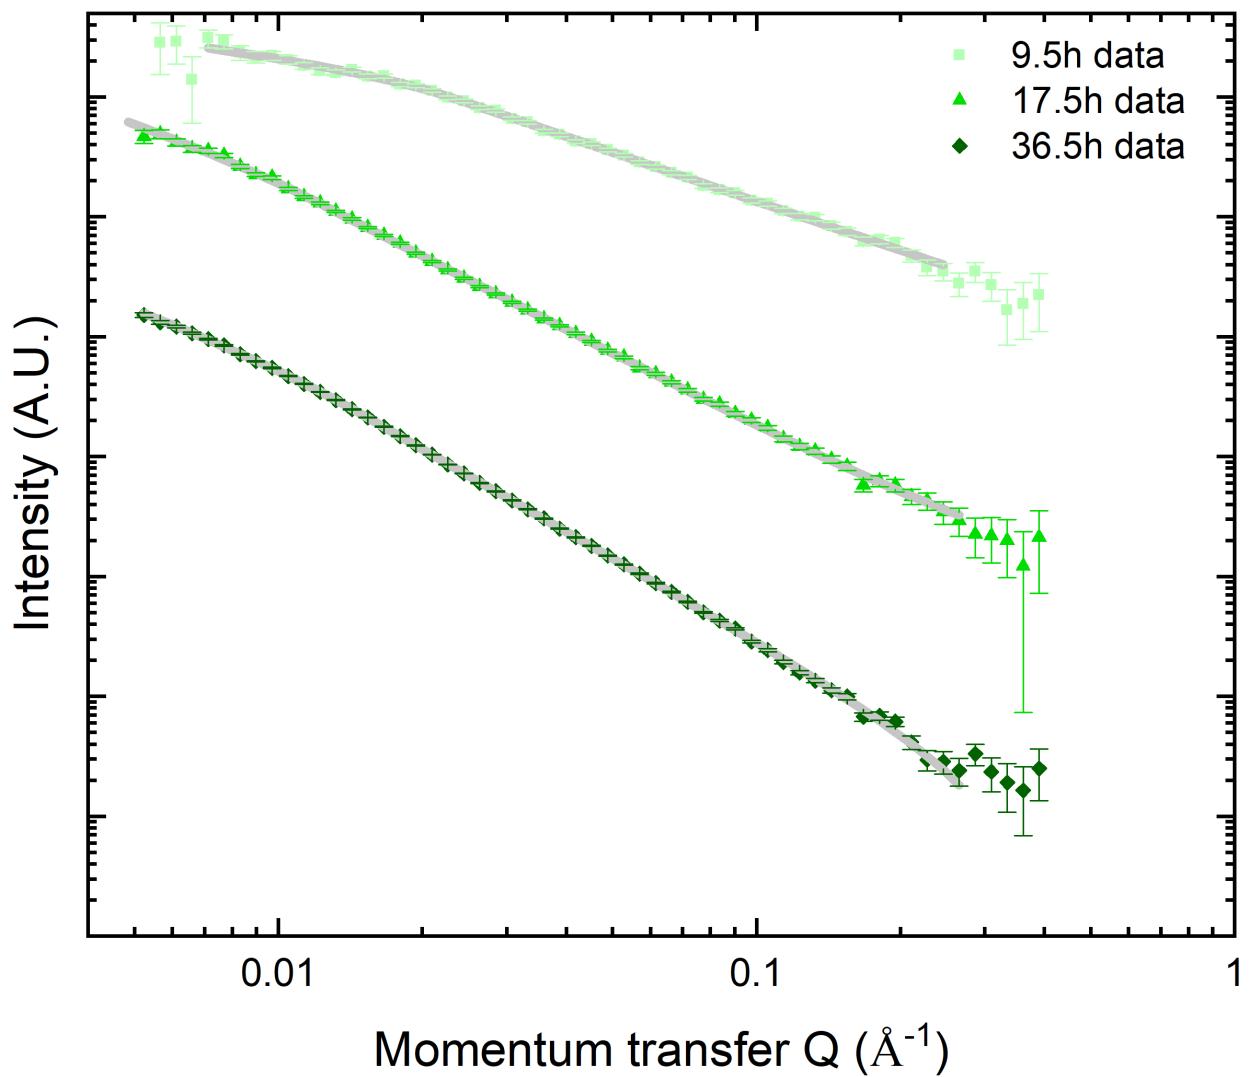

Figure S2: **SANS of P3HT solution part 2.** SANS data and their corresponding fits (gray) of the 5mg/mL rr-P3HT solution at 9.5 hours (pale green), 17.5 hours (lemon green), and 36.5 hours (dark green), during the period kept at 4°C. The three measurements are shown offset by two decades from each other to enable comparison.

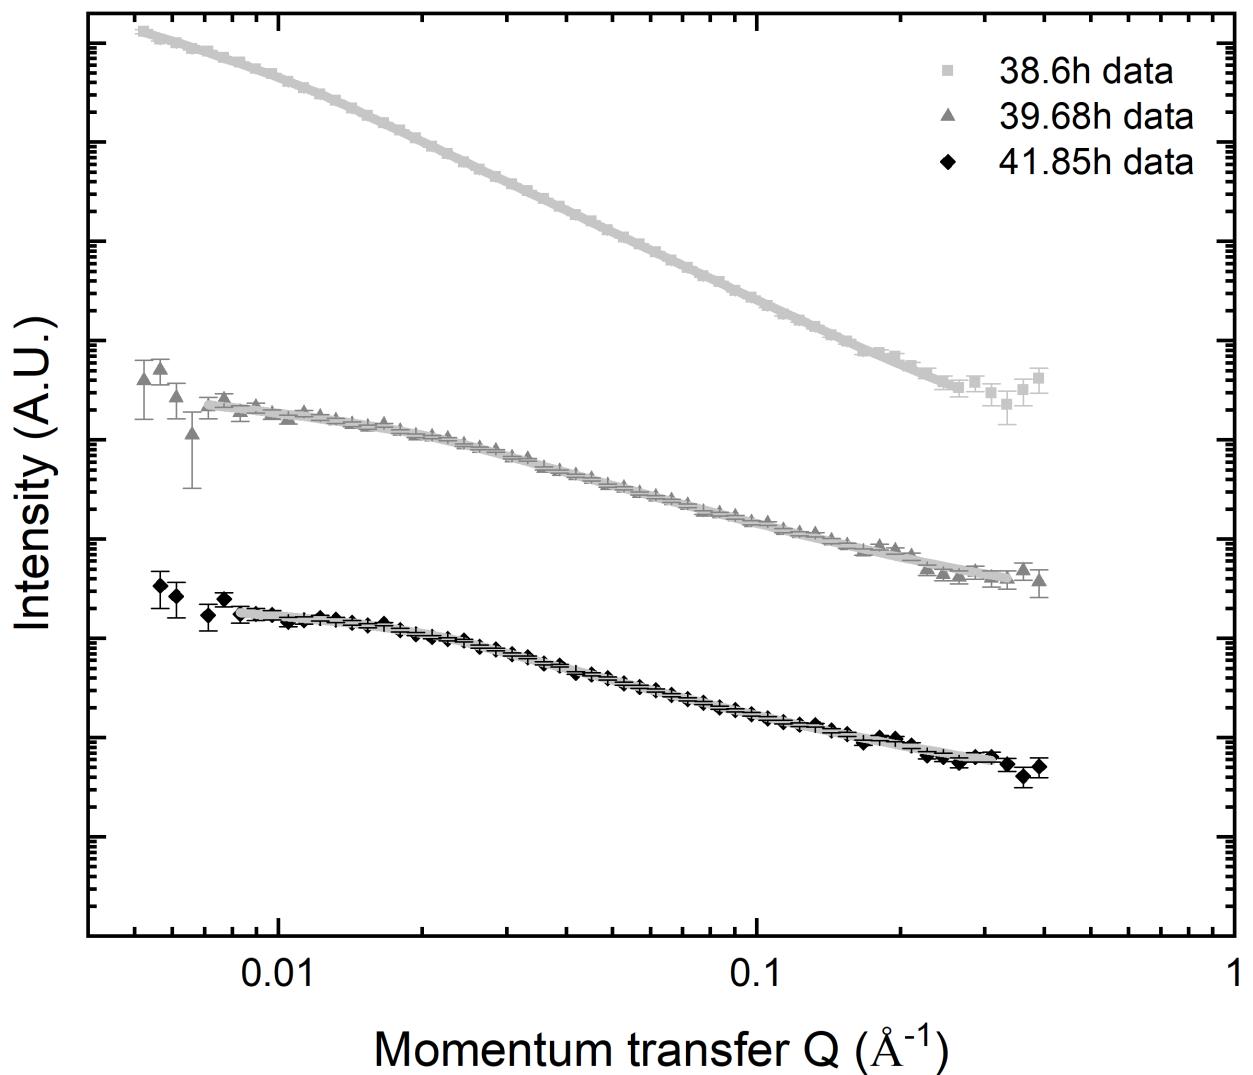

Figure S3: **SANS of P3HT solution part 3.** SANS data and their corresponding fits (gray) of the 5mg/mL rr-P3HT solution at the times of 38.6 hours (light gray), 39.68 hours (dark gray), and 41.85 hours (black) while the temperatures were 20°C, 40°C, and 80°C, respectively. The three measurements are shown offset by two decades from each other to enable comparison.
