Ultra-high-net-worth individuals: self-presentation and luxury consumption on Instagram

Abstract

Purpose – Limited research has examined the segment of ultra-high-net-worth individuals (UHNWIs). This study explores how this segment self-presents with regard to luxury on Instagram.

Design/methodology/approach – Using the *Forbes* “World’s Billionaire List” as a sampling frame, we collect and analyze 815 photos and textual data from 33 public and verified UHNWI profiles on Instagram. The analytical approach involves multiple stages and yields three key themes.

Findings – Through Instagram images, UHNWIs engage in inconspicuous consumption via subtle displays of luxury possessions and more cues that indicate luxury experiences, power, and social connections. The results further identify four dimensions of self-presentation in luxury consumption on social media: ostentatious, humble, revealed, and hidden.

Practical implications – Luxury marketers should focus on inconspicuous products and experiences that allow the UHNWIs to decelerate and spend time with their loved ones, access rare experiences, and demonstrate power via their networks.

Originality/value – Our study is the first to explore self-presentation with respect to luxury consumption on Instagram. We focus on UHNWIs, a neglected yet significant segment of the luxury market.

Keywords Self-presentation, Luxury consumption, Ultra-high-net-worth individuals, Instagram

1. Introduction

Social media, and particularly Instagram, have enabled individuals to virtually showcase their consumption practices to others, through photos and videos, in an attempt to construct their image and identities (Grewal *et al.*, 2019; Belk, 2013; Cadırcı and Güngör, 2019). According to Statista (2020a), there are more than 1 billion active users on Instagram, and they share 95 million photos and videos every day (Lister, 2019).

Prior research has examined the motivations that drive social media platform usage, including Instagram (Gao and Feng, 2016; Sheldon and Bryant, 2016; Sorokowska *et al.*, 2016; Lee and Sung, 2016; Fardouly *et al.*, 2018). These motivations include self-expression and presentation (e.g. Seidman, 2013). In particular, research suggests that individuals use photos as cues and signals to present to others their “best appearance” (e.g. ideal selves) and/or to showcase their lifestyles and experiences (Hong *et al.*, 2020; Wallace *et al.*, 2020). While much research exists on offline self-presentation and luxury consumption signaling (e.g. Dubois and Laurent, 1996; Cannon and Rucker, 2019; Jacob *et al.*, 2020) scarce work has examined how individuals self-present on social media (e.g. Seidman, 2013; Chua and Chang, 2016; Hong *et al.*, 2020) and, importantly, in relation to luxury consumption (Borel *et al.*, 2019).

In addition, because the luxury industry, which is steadily growing (Statista, 2020b), is dependent on ultra-high-net-worth individuals (UHNWIs) (Klaus, 2021), this consumer segment is worth deeper exploration. UHNWIs consist of people that are ultrawealthy and financially elite, with a net worth in excess of US\$30 million. Currently, there are over half a million UHNWIs that account for almost one fifth of the total luxury spending (Loudenback, 2018; Knight Frank, 2020; Neate, 2020). As such, these individuals have a disproportionately large impact on the luxury industry (Northrop & Johnshon, 2020b). For some luxury sectors, such as yachts and private aviation, UHNWIs represent the sole target market because such products/services allow these individuals to achieve recognition, uniqueness, and individuality

1
2
3 and to further widen the gap between themselves and their peers (Atwal and Bryson, 2017).
4
5 Currently, research examining how UHNWI consumers represent themselves on social media
6
7 is nonexistent. Indeed, we know very little about UHNWIs in relation to their luxury
8
9 consumption because they are an exclusive niche of individuals who do not typically
10
11 participate in research. To address this gap, we conduct a study that aims to answer the
12
13 following research question: *How do UHNWIs self-present on Instagram in relation to luxury*
14
15 *consumption?*
16
17

18
19 To address the research question, we utilize an inductive methodology whereby we
20
21 collect and content-analyze 815 photographs and textual stories posted publicly on Instagram
22
23 by 33 UHNWIs. Our analysis yields insightful results that contribute to theory and practice.
24
25 We use Instagram, as opposed to other social media platforms, because Instagram is a dedicated
26
27 photo-sharing site (Hong *et al.*, 2020) that is used by UHNWIs (Northrop & Johnson, 2020a).
28
29

30
31 The contribution of this study is twofold: First, in terms of theoretical contribution, this
32
33 study fills a key gap in the literature about self-presentation on social media—and importantly,
34
35 in the context of UHNWIs. This study is the first to examine how individuals in this segment
36
37 present themselves and their luxury consumption on Instagram, thus yielding novel knowledge
38
39 about this significant segment of ultrawealthy consumers. We identify four dimensions of self-
40
41 presentation, thus expanding existing knowledge on the nature of this concept in relation to
42
43 luxury consumption. Second, the study offers important practical insights, in the form of
44
45 specific guidelines and tactics for luxury marketers who target UHNWIs.
46
47

48
49 In the following section, we present the theoretical background of the study, which
50
51 draws on the concept of self-presentation, followed by a discussion of luxury consumption.
52
53 Subsequently, we present our methodological approach and offer a discussion of the key
54
55 findings and their implications for practice. We conclude with a discussion of the study's
56
57 limitations and directions for further research.
58
59
60

2. Theoretical Background

2.1 Self-presentation on social media

Self-presentation is a goal-directed and highly selective activity, whereby individuals control information “to create desirable impressions on audiences” (Schlenker and Wowra, 2003, p. 879). The concept, which derives from the early work of Goffman (1959), indicates that self-presentation entails expressions that individuals ‘give’ (e.g. expressions that are intentional), as well as expressions that they ‘give off’ (e.g. expressions that the individual does not intend to communicate) (Bullingham and Vasconcelos, 2012). In self-presenting, individuals use information to communicate a desirable public image which may or may not be true, suppressing specific personal information or adapting it as part of impression management (Hong *et al.*, 2020; Schlosser, 2020). Self-presentation differs from self-disclosure, which denotes individuals communicating “factual representations of self” irrespective of the impact on public image (Johnson, 1981; Schlosser, 2020). Several authors have argued that the principles of self-presentation, apply to online environments such as social media platforms, as these contexts allow users to assume or present different selves and identities through visual representations (e.g. photos, selfies) (Chua and Chang, 2016; Leary and Kowalski, 1990; Cadircı and Güngör, 2016; Bullingham and Vasconcelos, 2013; Hong *et al.*, 2020).

The “ecosystem” of social media allows users to present “versions” of themselves to manage impressions and self-presentations. Schlosser (2020) explains that social media platforms provide individuals with a multitude of possibilities regarding how to present themselves and their material wealth, due to the asynchronous communication, the existence of multiple audiences, and the opportunity for feedback. Specifically, and relative to face-to-face communication, social media communication is largely asynchronous (Ellison *et al.*,

1
2
3 2006), giving individuals the ability to “shape” their self-presentation on these platforms in a
4 strategic and controlled manner to present their “best self” or different versions of themselves
5
6 (Hong *et al.*, 2020; Jang *et al.*, 2015).
7
8
9

10 In addition, because multiple audiences exist on social media, who are recipients of the
11 intended communication, individuals attempt to manage impressions in terms of *what* to post
12 and *what* to discuss (e.g. holidays vs politics). Indeed, the number and the composition of social
13 media audiences influence individuals’ self-presentation (Schlosser, 2020). For instance, one’s
14 social media audience may consist of peers (e.g. homogenous audiences) or may comprise a
15 diverse group of individuals, thus triggering different forms of self-presentation. Concurrently,
16 social media’s ability to elicit feedback enhances the urge to self-present, in that individuals
17 attempt to “please audiences” by presenting themselves in a way that meets their expectations
18 (Chua and Chang, 2016; Seidman, 2013; Schlosser, 2020).
19
20
21
22
23
24
25
26
27
28
29
30

31 A large stream of research has focused on examining why individuals self-present on
32 social media platforms (e.g. via photos and selfies), positing that self-presentation is linked to
33 motives such as self-validation and approval, as well as personality traits such as narcissism
34 and extraversion (Seidman, 2013; Sorokowska *et al.*, 2016; Etgar and Amichai-Hamburger,
35 2017; Igani and Schroeder, 2016). Adding to this stream, scholars have argued that nonverbal
36 elements in photos and selfies, including representations of socioeconomic status, mood, and
37 appearance, operate as cues of self-presentation on social media, thus allowing individuals to
38 enact different self-identities (Hong *et al.*, 2020). For instance, prior research on self-
39 presentation on Twitter indicates that female athletes tend to use artistic and scenic pictures,
40 focusing on their nonathletic, casual, and glamorous appearances as opposed to their athletic
41 self (Li *et al.*, 2017; Coche, 2014). Similarly, Leban *et al.*’s (2020) work on high-net-worth
42 (HNW) social media influencers suggests that these individuals self-present on Instagram in
43 different ways by enacting different personas, such as ambassadors of true luxury, good role
44

1
2
3 models, and altruists. Interestingly, the authors find that HNW influencers tend to be
4 inconspicuous in their consumption of luxury, focusing instead on meaningful, tasteful, and
5 sustainable luxury activities and settings. In addition, the authors find that these individuals do
6 not adopt a materialistic approach to luxury but rather focus on luxury and leisure experiences
7 (vs possessions) that allow them to enjoy life (Leban *et al.*, 2020).

17 2.2 *Luxury consumption*

19 The growing body of research on luxury suggests that the concept of luxury is
20 subjective, relative, and context-specific (e.g. Ko *et al.*, 2019; Turunen, 2018), making it
21 difficult for researchers to arrive at an agreed-upon definition of what constitutes a luxury
22 product. According to Tynan *et al.* (2010, p. 1158), luxury in a consumption setting refers to
23 “high quality, expensive and non-essential products and services that appear to be rare,
24 exclusive, prestigious, and authentic and offer high levels of symbolic and emotional/hedonic
25 values through customer experiences”. The conceptualizations of luxury in the pertinent
26 literature vary in terms of the specific expressions or sources of luxury value, which include,
27 *inter alia*, uniqueness (e.g. Stathopoulou and Balabanis, 2019; Parguel *et al.*, 2016; Vigneron
28 and Johnson, 2004), aesthetics (e.g. Hudders *et al.*, 2013; de Barnier *et al.*, 2012), excellent
29 quality (e.g. Stathopoulou and Balabanis, 2019; Christodoulides *et al.*, 2009), heritage/history
30 (e.g. Roux *et al.*, 2017; de Barnier *et al.*, 2012), elitism and distinction (e.g. Dubois *et al.*, 2001;
31 Kapferer, 1998), conspicuousness (e.g. Amatulli *et al.*, 2018; Wiedmann *et al.*, 2009), and
32 hedonic escapism (Holmqvist *et al.*, 2020). However, researchers generally agree that what
33 differentiates luxury and nonluxury products is the mix of their components on three
34 dimensions: functionalism, experientialism, and symbolic interactionism (Berthon *et al.*, 2009;
35 Shukla *et al.*, 2015).

1
2
3 With the increasing “democratization of luxury” due to globalization and a growing
4 demand for prestige products and services at affordable prices (Kapferer and Bastien, 2012),
5 alternative conceptualizations of luxury have emerged. These include “masstige” (Kumar *et*
6 *al.*, 2020; Paul, 2015), unconventional luxury (Thomsen *et al.*, 2020; Rosenbaum *et al.*, 2019),
7 and collaborative luxury consumption (Pantano and Stylos, 2020), which challenge key
8 characteristics of traditional luxury, such as being expensive and exclusive. Despite the concept
9 of luxury expanding to include “day trippers” (or excursionists)—that is, the bottom end of the
10 wealth pyramid—there is a paucity of research on the concept of luxury and what it means for
11 the top of the wealth pyramid, that is, the ultrawealthy.

23
24 According to the literature, luxury consumption is driven by two motives: personal
25 (intrinsic) and interpersonal (extrinsic) (Theodoridis and Vassou, 2018). Personal motives
26 typically focus on the hedonic value of luxury, which represents access to pleasure through
27 luxury’s multisensorial compression, and perfectionism (pursuing high standards for oneself—
28 in this case, via consumption), which is reflected in luxury products’ superior quality,
29 craftsmanship, and refinement. Extrinsic motives focus on the role of luxury as a social marker
30 that recreates social stratification in capitalist societies and allows consumers to achieve social
31 elevation (Kapferer and Bastien, 2012). The preference for more expensive over cheaper
32 products that are nonetheless functionally similar is, according to Nelissen and Meijers (2011),
33 often attributed to “conspicuous consumption”, a term originally coined by Veblen (1899) to
34 explain individuals’ “tendency to enhance their image through overt consumption of
35 possessions, which communicates status to the others” (O’Cass and McEwen, 2004, p. 34).

51
52
53
54
55
56
57
58
59
60
Luxury products are symbols of one’s success, and as such, their public display enhances one’s
social status and cachet.

56 While conspicuous luxury consumption focuses on ostentation and signaling to convey
57 wealth, impress others, and confirm social status (Corneo and Jeanne, 1997), there are
58
59
60

1
2
3 variations that are mainly attributed to two underlying factors: the “bandwagon effect” and
4 “snob effect”. Due to their strong symbolic meanings, luxury products can instill a sense of
5 affiliation with other consumers or help differentiate consumers from other consumers
6 (Kastanakis and Balabanis, 2012; 2014; Leibenstein, 1950). Therefore, some consumers use
7 luxury products and brands in a relational pattern to integrate socially with groups of consumers
8 who publicly display them. Other consumers seek to consume rare, novel, or stealth luxuries
9 in a contrast-creating pattern to distance themselves from other consumers and thereby satisfy
10 their need for uniqueness (Kastanakis and Balabanis, 2014).

11
12 Han et al. (2010) identify two clusters of consumers, both possessors of significant
13 wealth, who nonetheless exhibit different conspicuous consumption behaviors due to their
14 varying need for status. *Parvenus* have a high need for status, and their consumption of luxury
15 products aims primarily to dissociate them from lower-wealth groups and associate them with
16 higher-wealth groups. To this end, parvenus consume established brand names and visible
17 logos, which act as loud signals that are broadly recognizable across consumer segments.
18 *Patricians* are more concerned with their in-group affiliation and exhibit discretion in their
19 luxury consumption via more subtle signals (Berger and Ward, 2010), niche brands, and
20 bespoke products that are only recognized by connoisseurs—in this case, their fellow
21 patricians.

22
23 Consistently, Eckhardt *et al.* (2015) argue for the decoupling of the luxury construct
24 from conspicuousness and a shift toward *inconspicuous consumption* characterized by “use of
25 subtly marked products which are misrecognized by most observers, but facilitate interaction
26 with those who have the requisite cultural capital to decode the subtle signals” (p. 808). This
27 articulation is consistent with the ideas of Bourdieu (1984), according to whom the petite
28 bourgeoisie (e.g. parvenus) exhibit a lifestyle that reflects an aspiration to a bourgeoisie
29 lifestyle (e.g. patricians) but insufficient cultural capital to attain it. Despite their wealth,
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46

49
50
51
52
53
54
55
56
57
58
59
60

1
2
3 members of the petite bourgeoisie adopt “popularized” tastes and aesthetic forms due to their
4
5 lack of cultural capital. Cultural capital does not exist in isolation but interacts with economic
6
7 and social capital to determine one’s position in the social hierarchy (Bourdieu, 1984).
8
9

10 While traditionally the focus of conspicuousness has been on the possession and display
11
12 of material goods, a recent stream of literature highlights the importance of the luxury
13
14 experience (Klaus 2020; de Kerviler and Rodriguez, 2019). Through a process of self-
15
16 expansion, luxury experiences offer consumers “opportunities to learn, acquire skills, and
17
18 engage in rich emotional or sensorial discoveries”, ultimately leading to an enriched self-
19
20 concept (de Kerviler and Rodriguez, 2019, p. 251). A recent report by McKinsey (2020)
21
22 highlights the increasing importance of experiential luxury—which includes, *inter alia*,
23
24 upscale hotels, resorts, cruises, and restaurants—as one of the most dynamic and fast-growing
25
26 sectors of luxury. Interestingly, millennials and, to a lesser degree, baby boomers now focus
27
28 more on luxury experiences and “Instagrammable moments” rather than on status goods
29
30 (McKinsey 2020). This trend is in line with previous research showing that experiences bring
31
32 greater happiness than material possessions (Nicolao *et al.*, 2009), particularly extraordinary
33
34 experiences that are uncommon and infrequent and transcend the (ordinary) experiences of
35
36 everyday life (Bhattacharjee and Mogilner, 2014). By sharing pictures of such luxury
37
38 experiences on Instagram, consumers compensate for the fact that the consumption of these
39
40 experiences is typically less conspicuous than that of luxury goods (Luna-Cortés, 2017).
41
42
43
44
45
46

47 Another stream of literature seeks to diminish the role of possessions and public
48
49 exposure of status symbols by focusing on individuals’ social interactions (Goffman, 1967).
50
51 This literature suggests that status manifests through tacit assessments in everyday social
52
53 interactions, as these involve “micro-political acts of status claiming” that allow individuals to
54
55 (re)negotiate their societal roles and positions (Dion and Borraz, 2017, p.2). Thus, the focus is
56
57
58
59
60

1
2
3 no longer on the ownership and display of goods that signal status but rather on the status battle
4
5 that emerges from social interactions.
6

7
8 Shifting the focus of conspicuousness from the preciousness and scarcity of products
9
10 to the preciousness and scarcity of individuals, Bellezza *et al.* (2017) suggest that long hours
11
12 of work and lack of leisure time have become powerful status symbols signaling that the
13
14 individuals concerned are valued and in demand. By contrast, Husemann and Eckhardt (2019)
15
16 argue that rather than busyness and lack of leisure time, a new status symbol is deceleration—a
17
18 concept that refers to a slower experience of time. According to Husemann and Eckhardt (2019,
19
20 p. 1161), people in contemporary societies work excessively and are short of time, so “only a
21
22 fortunate few can afford to escape to oases of deceleration”.
23
24
25
26
27

28 **3. Methodology**

29 *3.1 Sampling and data collection*

30
31
32 In this study, we explore how UHNWIs present themselves with respect to luxury on
33
34 Instagram. Therefore, our first concern was to identify Instagram accounts of UHNWIs. In the
35
36 absence of a list of UHNWIs, we considered the available alternatives. *The Sunday Times* “Rich
37
38 List 2020” (<https://www.thetimes.co.uk/sunday-times-rich-list>) was discarded because it
39
40 included only UK residents and therefore was not consistent with Instagram’s worldwide
41
42 population, nor with the fact that the United States, China, and Japan have more millionaires
43
44 than the United Kingdom (McCarthy, 2019). The “Web Rich List” from the BBC
45
46 (<http://news.bbc.co.uk/1/hi/technology/8562379.stm>) was appealing because the Internet has
47
48 created some of the youngest billionaires and digital natives who are more familiar with
49
50 Instagram (Statista, 2020a). However, limiting our attention to a specific sector would have
51
52 limited the representativeness of the UHNWIs diverse sources of wealth (e.g. family, inherited
53
54 wealth). Therefore, we used the publicly available *Forbes* 2020 “World’s Billionaires List”
55
56
57
58
59
60

1
2
3 (<https://www.forbes.com/billionaires/>) as a sampling frame to identify UHNWIs because of the
4 list's reputation, its widespread recognition, and its international composition. The billionaires'
5 estimated net worth was based on a snapshot of wealth using stock prices and exchange rates
6 from March 18, 2020. This includes a valuation of various assets including private companies,
7 real estate, and art. An estimated net worth of \$1 billion per person is the minimum threshold
8 to make the list. The full 2020 list includes 2,095 individuals. Their wealth ranges from \$113
9 billion to \$1 billion, they range in age from 22 to 101 years, and most are male. We focused on
10 the top end of the UHNWI segment. We included only official and public accounts (verified
11 with the blue tick). There were a total of 33 official accounts in the sample.
12
13
14
15
16
17
18
19
20
21
22
23
24
25

26 *3.2 Images selection*

27
28 Some accounts were active, while others had only a few images. All accounts included
29 some comments, but none included replies to the comments. Selected content gave a fair
30 representation of the individual stream in terms of subject and style while capturing the
31 variation across accounts (maximum variation sampling). This sampling yields "(1)
32 high-quality, detailed descriptions of each case, which are useful for documenting uniqueness,
33 and (2) important shared patterns that cut across cases and derive their significance from having
34 emerged out of heterogeneity" (Patton, 2002, p. 235). For example, if a stream included family
35 photos, we would include this in the sample, but we would not include 20 family photos if there
36 were different types of content in the stream. At the same time, if, in our exploration of the
37 accounts, we noted different types of family photos (e.g. formal vs informal settings), we would
38 include an exemplar of both categories.
39
40
41
42
43
44
45
46
47
48
49
50
51
52
53

54 The final sample, which contained 815 images, provides an overview of the types of
55 images that can be found in UHNWIs' (i.e. billionaires') official Instagram accounts.
56 Confidence in the qualitative value of our sample was bolstered insofar as we could observe
57
58
59
60

1
2
3 repetition in the types of content we collected across the various accounts, which provided
4
5 reassurance that extending the sample further would not result in significantly new images (i.e.
6
7 we had achieved an acceptable degree of data saturation) (Suri, 2011).
8
9

10 11 12 **4. Analysis** 13

14 We approached the UHNWIs' photos on Instagram as rich visual texts (Gleeson, 2011).
15
16 We adopted a visual analysis process similar to that used in Presi *et al.* (2016) to analyze brand
17
18 selfies. We started with the *descriptive analysis* of the content. Through objective descriptions
19
20 of the images and videos, we documented the type of content that was shared, that is, the
21
22 material reality shown in the photos. Then, using the constant comparative method (Glaser and
23
24 Strauss, 1968), we identified the categories of images/videos that could be found in these
25
26 accounts. The team met to discuss the initial categories (e.g. family, photos with famous
27
28 people) on two occasions.
29
30
31

32
33 Next, the researcher leading the analysis conducted a formal analysis of the content. At
34
35 this stage, principles of photographic compositions were used to explain how the visual
36
37 elements deliver the image meaning (Ang, 2006). These include elements such as objects,
38
39 colors, composition, and dominance and subordination of the subjects, among others. The
40
41 formal analysis shows how the image communicates through its composition, not just what it
42
43 captures. Formal analysis helps explain why an image, which includes similar visual elements,
44
45 may evoke a different response (e.g. formal family photos vs informal snapshots). In other
46
47 words, we applied the semiotic principle of relationality to unpack how visual elements come
48
49 together into particular kinds of messages (Goodings and Brown, 2011).
50
51
52

53
54 Third, we conducted *polytextual thematic analysis* of the UHNWIs' Instagram cultural space.
55
56 This type of analysis assumes that texts can only be read in reference to other texts (Gleeson,
57
58 2011). Therefore, we considered the images along with the meaning of all the elements that
59
60

1
2
3 they included (e.g. brands, consumption experiences, celebrities). Through a process of
4 categorization and abstraction, as explained by Spiggle (1994), we identify the repetitive
5 features, or themes, that underlie how UHNWIs display themselves in their Instagram
6 profiles. This iterative process continued until no further distinctive themes emerged. Team
7 discussions also helped refine the selection. A summary of the codes and themes discovered
8 and examples of images can be found in Appendix 1.

18

19 **5. Findings**

20
21 In this study, we explore the self-presentation practices of UHNWIs on Instagram. The
22 images offer a glimpse into their lifestyles and consumption practices. Three key themes
23 emerge: display of luxury possessions, consumption of time, and power styles and resources.
24 We discuss each in turn.
25
26
27
28
29
30
31
32

33 *5.1 Display of luxury possessions*

34
35 There seems to be a lot of variation in terms of how much luxury is on display. Obvious
36 displays of possessions (e.g. luxury cars, beautiful houses) and brands (e.g. Dior) can be found,
37 but this is only a superficial reading of the photo/video accounts. Obvious branded images are
38 often linked to the business interest of the individual (i.e. ownership of luxury hotel chains or
39 car brands). Luxury possessions are exposed organically and indirectly in the background of
40 the photos rather than being the central focus of the image. For example, the private jet appears
41 in a photo, but the photo is about the fact that the UHNWI is bringing his best friend (the dog)
42 with him on a trip. Therefore, while there is conspicuous consumption of luxury, its display is
43 controlled and often indirect.
44
45
46
47
48
49
50
51
52
53
54
55
56

57 *5.2 Consumption of time*

1
2
3 The autobiographical nature of Instagram accounts lends itself to revealing how
4 UHNWIs spend their time and therefore their lifestyle. The accounts collectively provide a
5 glimpse into their life at work, at home, on holiday, socializing, and exercising. The variety
6 and frequency of the images suggest busy but balanced lifestyles. Time at work is often
7 presented with cues such as business attire and/or accompanying text that celebrates hard work
8 to achieve results. At the same time, the accounts are populated by holiday photos, downtime
9 spent with families, and having fun with business associates. There are no photos of stressful
10 meetings or a difficult day at the office. Effort is shown only to a small extent; the accounts
11 reproduce celebrations of the results: the good life, both personally and professionally.
12
13
14
15
16
17
18
19
20
21
22
23

24 A common denominator throughout the photos and accompanying text is that of making
25 experiences tangible (Lyu, 2016). Daily life is embedded in these Instagram images. The
26 UHNWIs' lifestyles are aspirational for their professional and personal success as well as the
27 suggested balance between them. The images are also aspirational because these UHNWIs can
28 spend their time doing things that not everyone can. The analysis discloses the following luxury
29 experiences:
30
31
32
33
34
35
36
37

- 38 • *Luxurious locations.* Experiences can be luxurious because of where they take place,
39 such as a breathtaking view from a hotel room window or formal events in luxurious
40 surroundings. Photos can be carefully framed, giving the viewer the opportunity to
41 experience this indirectly. Other photos are not crafted to share the experience with the
42 viewer, but rather to show it off. Multiple luxury cues are included such as elegant
43 clothes, chandeliers or the long corridor of the luxury hotel, to show off the environment
44 in which it was taken.
45
46
47
48
49
50
51
52
- 53 • *Privileged access location.* Some experiences may occur in not obviously luxurious
54 places, but access to them reveals privilege. For example, access to a chef's kitchen,
55 can be a luxury experience that not many can have.
56
57
58
59
60

- *Involvement in extraordinary experiences.* Some experiences, because of their nature, are accessible to only the very few. These are leading-edge projects or endeavors; being able to contribute to them sets the person apart from others, even if they do not experience them directly themselves. For example, the privilege of being able to be involved in space exploration. Photos show an up-close view of the experience, which suggests that the UHNWI is not a mere spectator but rather is experiencing it from the inside and, in so doing, is part of it.
- *Celebrity events.* These are aspirational events that, due to their public nature, combine privileged access, luxury surroundings, high-class dress codes, and an audience. Invitations to these events symbolize status and “being in demand”. The accounts show photos filled with celebrity codes: the red carpet, the formal attire, walking and smiling for the photographers. It is clear that the UHNWIs belong to it as any other celebrity does.

5.3 Power styles and resources

Another dominant narrative throughout the accounts is one of power. UHNWIs are powerful, but how power is presented varies and so do the sources of power in the images. On the one hand, we find images that communicate power in masculine and individualistic terms. Images of leadership, such as addressing a crowd or employees, are common. Images display physical strength and metaphors of dominance such as portraying a lion. On the other hand, soft power is also represented. Here, the emphasis is on prosocial behavior, or having power to make a difference or support a cause. Examples depict a collaborative leadership style via friendly images with employees and endorsements of friends’ business endeavors.

In terms of resources, social capital, which is exemplified in connections with important people in politics or popular culture, is prevalent throughout. UHNWIs are well-liked and connected. Indeed, this is a striking feature in most of the accounts. Sontag (1977) describes

1
2
3 photographs as surrogates for possession, and in this sense, influential relationships become
4
5 “luxury products” by virtue of their exclusivity, prestige, and ability to communicate power to
6
7 others. Reference to economic power is shown largely indirectly, as discussed in the previous
8
9 themes, although a limited number of images referencing money and wealth in an ostentatious
10
11 manner can also be found, such as sitting on a throne made of money. UHNWIs differ also in
12
13 terms of their taste and how they display it. On the one hand, we have those who show
14
15 affiliation with the upper class by exhibiting refined taste (Bourdieu, 1984) through, for
16
17 example, their passion for art, or through sophisticated aesthetics as revealed in their homes.
18
19 On the other hand, the display may be more direct. For example, a statue in classic Greek style
20
21 is transformed from the ideal form into the recognizable billionaire (the face is his portrait)
22
23 with weapons such as a machine gun to show power beyond the classic muscular beauty. In
24
25 this image, classical codes are appropriated for personal display and paired with modern items.
26
27
28
29
30
31
32

33 To conclude this section, we use the semiotic square to both summarize and systematize
34
35 the foregoing analysis (see Figure 1). We identify four distinct and interrelated dimensions of
36
37 self-presentation in UHNWIs’ Instagram profiles in relation to luxury: ostentations, humble,
38
39 revealed and hidden. “Ostentatious” display is obvious and often irreverent display of luxury.
40
41 This form of self presentation includes the explicit display of luxury as well as showing off
42
43 social connections or money. The UHNWIs display their exceptional lifestyles in this way. This
44
45 dimension is in clear contrast with “Humble” displays, which downplay luxury via ordinary life
46
47 narratives and repaying for privilege by making positive impact on society. “Ostentatious”
48
49 and “Humble” displays are related through a relationship of contrariety of superiority, the
50
51 former emphasizes the economic and/or social superiority of the UHNWI while the latter down
52
53 plays it or balances it via pro-social behaviour. The third type of self-presentation is “Hidden”.
54
55 This display is characterised by the lack of branding (unless part of the individual’s business
56
57
58
59
60

1
2
3 interests) and the omission of elements of luxury. It also points to what is not seen, for example
4 there is no reference to the cost or negative aspects of luxury; there is no conversation in the
5 comments, no reply to them. Both “Hidden” and “Humble” displays are forms of restrained
6 self-presentation practices. “Hidden” and “Ostentatious” displays are related through
7 contradiction of disclosure, the former is an obvious non-disclosure, the latter is showing off.
8 The fourth form of display is “Revealed”. This is an indirect and perhaps even unintentional
9 form of self-presentation through luxury. Luxury can be seen but is not the main focus of the
10 image, for example it appears in the background. “Revealed” and “Ostentatous” displays both
11 show affluence but in different and complementary ways. “Revealed” display is in
12 contradiction with the “humble” one on the basis of control: the former is the lack of control
13 through indirect display, the latter is about controlled self-presentation. Finally, the “Revealed”
14 display, which points to some transparency of the Instagram profiles, is in contrary relationship
15 with the “Hidden” display which is about omitting cues from view.

6. Discussion, Contributions, and Implications

42 In this study, we examine how UHNWIs self-present on Instagram in relation to luxury
43 consumption. To achieve this objective, we collected and analyzed 815 photos and textual data
44 from 33 UHNWIs on Instagram. The results reveal that UHNWIs’ self-presentation with
45 respect to luxury consumption is a diverse and complex field. Different self-presentation
46 dimensions can be identified and each one relates to the others in an opposing or
47 complementary manner; suggesting that while Instagram may be a window into the luxurious
48 life of the UHNWIs, the images posted provide different views to the followers.
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3 More specifically, we identify four dimensions of UHNWIs' self-presentation in
4 relation to luxury consumption: (1) ostentatious, (2) humble, (3) revealed, and (4) hidden.
5
6 Examining these dimensions suggests that UHNWIs generally present themselves in a less
7 conspicuous and more indirect manner (Leban *et al.*, 2020), showing more experiences and
8 social interactions that communicate power, exclusivity, and status (Sontag, 1977; Dion and
9 Borraz, 2017). Luxury consumption is reflected via the subtle display of luxury possessions;
10 consumption of time (Husemann and Eckhardt, 2019), which includes luxury experiences at
11 exclusive locations (de Kerviler and Rodriguez, 2019) and passing time attending aspirational
12 events; and influential relationships that emphasize prestige (Dion and Borraz, 2017). Overall,
13 these dimensions interact to help UHNWIs shape and control their image and specific aspects
14 of it (e.g. identities) on Instagram.

31 *6.1 Theoretical contributions*

32
33 Our research offers several theoretical contributions. First, and in relation to our
34 research question this study fills a significant research gap by examining UHNWIs' self-
35 presentation on Instagram in relation to luxury consumption, which reflects a topic that has not
36 been examined before in the extant literature. To the best of our knowledge, this study is the
37 first to focus on examining how this exclusive and niche target group self-presents on
38 Instagram with respect to luxury consumption. Importantly, we identify four dimensions that
39 exemplify how UHNWIs self-present, thus expanding current understanding on how this
40 segment strategically shapes information with regard to their luxury consumption. A second
41 contribution pertains to the focus of this study on UHNWIs, a very exclusive segment of the
42 market who have not been the focus of research on luxury consumption to date, even though
43 they constitute a key segment of the luxury industry. Finally, the study also contributes to
44 research on the domain of luxury consumption, by highlighting how power, consumption of
45

1
2
3 time, and social interactions intertwine in luxury consumption, reinforcing the idea that high-
4 status individuals consume luxury inconspicuously (Rucker and Galinsky, 2009).
5
6
7
8
9

10 6.2 Managerial implications

11
12 Our findings regarding UHNWIs have significant managerial implications. UHNWIs'
13 Instagram account is a tool that they use for impression management and arguably does not
14 capture their lifestyle in its entirety. However, managers can still design actionable strategies.
15 By observing UHNWIs' public profiles on Instagram, marketers interested in this segment may
16 categorize them along the dimensions of self-presentation vis-à-vis luxury identified in this
17 study (i.e., ostentatious, humble, hidden and revealed) and use these insights to help them tailor
18 their communication strategies. For example, an UHNWI whose self-presentation vis-à-vis
19 luxury on social media can be characterized ostentatious is likely to be attracted to posts or ads
20 that suggest power and display of wealth. Alternatively, UHNWIs who engage in more
21 revealed forms of self-presentation vis-à-vis luxury on social media are likely to be more
22 attracted to ads and posts communicating the potential enhancement of life quality that a
23 specific luxury good or experience may offer. In targeting these important individuals,
24 managers should recognize that most UHNWIs do not want to flaunt their wealth to the general
25 public and instead prefer to be seen consuming experiences rather than possessions. While this
26 does not mean that these individuals do not also consume possessions, they are less likely to
27 consume them publicly on their social media accounts. Possessions are probably more
28 comfortably shared with their fellow patricians or members of their closed network. Instead,
29 extraordinary experiences are perceived to be less ostentatious and more humble, thus putting
30 UHNWIs more at ease when it comes to signaling these on Instagram.
31
32

43
44
45
46
47
48
49
50
51
52
53
54
55

56 Another implication is related to "who UHNWIs know", as it is suggested that these
57 individuals also derive status from other powerful individuals in their network. Managers could
58
59
60

1
2
3 highlight these connections and networking opportunities in their one-on-one communications
4 with UHNWIs. For example, they might mention that cultural, political, and economic elites
5 patronize or are members of specific exclusive retreats and private clubs. This would be
6 particularly effective for parvenus, who aspire to associate with patricians. Finally, managers
7 should acknowledge how busy these individuals are and target them with products such as
8 private jets and helicopters that help them save time and better manage their busy schedules;
9 at the same time, they should target UHNWIs with products that help them decelerate and
10 appreciate time with their families and loved ones, such as a luxury yacht or a cruise.
11
12

18
19
20
21
22
23

24 *6.3 Limitations and directions for further research*

25
26 No research is free of limitations, and the present study is no exception. In the absence
27 of a robust sampling frame that captures UHNWIs, defined as having a net worth of at least
28 \$30 million, our study employed the *Forbes* “World’s Billionaires List”, thus focusing on
29 billionaires who comprise the top end of this segment. Further research might examine the
30 lower and middle ends of the UHNWI spectrum, particularly those who have recently achieved
31 this status, to observe and juxtapose their self-presentation and luxury consumption on
32 Instagram with the upper end of the segment to determine if the themes identified are uniform
33 across this segment. In addition, our unit of analysis was the photo posted by the UHNWI
34 rather than the UHNWI himself or herself. Further research might explicitly consider the
35 overall profile of each UHNWI and their holistic approach to posting with a view to developing
36 a typology of UHNWIs based on the way they self-present and portray their luxury
37 consumption. Having said this, we observe that individual profiles are not necessarily internally
38 homogenous with respect to self-presentation in luxury consumption, so our approach is
39 arguably more comprehensive because it does not lose any information through aggregation.
40 Our study adopts an inductive approach to identify themes related to UHNWIs’ self-
41
42
43

59
60

1
2
3 presentation on Instagram. Other research could adopt a quantitative approach to identify
4
5 drivers of the various themes, such as wealth size, old versus new money, age, and gender.
6
7 Finally, with a larger sample of photos, generated under a different sampling frame that would
8
9 also include lower- and middle-end UHNWIs, it would be possible to compare and contrast
10
11 self-presentation practices of UHNWIs from different regions and cultural backgrounds,
12
13 particularly with regard to their luxury consumption.
