Supplementary 1 – Chemistry methods

The ligand TPPHZ was synthesised through established procedure.¹

S-1a. $[\text{Ru}(\text{3,4,7,8-tetramethyl-1,10-phenanthroline})_2\text{Cl}_2]^{2+}$,²

$\text{RuCl}_3 \cdot 3\text{H}_2\text{O}$ (1.14 g, 5.50 mmol), TMP (2.4 g, 10.16 mmol) and LiCl (1.47 g, 34.68 mmol) were heated for 8 h under reflux in DMF (19 mL). The reaction mixture was cooled to room temperature and acetone was added (100 mL). The solution was stored at 4 °C for 16 h forming a dark purple precipitate. The product was washed with water and ethanol and dried *in vacuo*. Mass = 2.07 g (3.21 mmol, 63.2 %) purple solid. MS m/z (%): 609.1 (62) $[\text{M} - \text{Cl}]^+$, 637.1 (100) $[\text{M}]^+$ 667.1 (44) $[\text{M} + \text{Na}]^+$. Carbon monoxide displaced one of the chlorines.

$[\text{M}-3(\text{PF}_6)]^{3+}$. ¹H NMR (MeCN-*d*₆) δ (splitting integration): 2.1 (s, 48H), 7.8 (s, 4H), 7.9 (t, 8H), 8.2 (dd, 4H), 8.4 (s, 8H)

S-1b. $[\{\text{Ru}(\text{TMP})_2\}_2(\text{tpphz})]^{4+}$,³

$\text{Ru}(\text{TMP})_2\text{Cl}_2^{2+}$ (1.12 g, 1.73 mmol) and TPPHZ (0.260 g, 0.68 mmol) were added to a 1:1 solution of ethanol and water (80 mL). The solution was refluxed for 12 h under argon. After completion the reaction mixture was cooled to room temperature and stored at 4 °C for 16 h. The red solution was filtered, and ethanol removed by rotary evaporation. A saturating amount of NH_4PF_6 was added; this caused the formation of a dark red precipitate. The precipitate was collected *via* vacuum filtration, washed with water and recrystallised in acetonitrile by addition of diethyl ether. The product was dried *in vacuo* and purified on an alumina column, solvent system: 95 % MeCN, 3 % dH_2O and 2 % KNO_3 . Mass = 1.22 g (0.58 mmol, 85.7 % yield). MS; m/z (%): 911 (10) $[\text{M} - 2(\text{PF}_6)]^{2+}$, 559 (100) $[\text{M}-3(\text{PF}_6)]^{3+}$. ¹H NMR (MeCN-*d*₆) δ (splitting integration): 2.1 (s, 48H), 7.8 (s, 4H), 7.9 (t, 8H), 8.2 (dd, 4H), 8.4 (s, 8H), 9.9 (dd, 4H). ¹H NMR (Acetone-*d*₆) δ (splitting integration): 2.1 (dt, 48H), 8.0 (m, 4H), 8.1 (s, 4H), 8.2 (s, 4H), 8.52 (d, 4H), 8.6 (s, 8 H), 10.1 (d, 4H). Elemental analysis $[\{\text{Ru}(\text{3, 4, 7, 8-Tetramethyl-1,10-phenanthroline})_2\}_2(\text{tpphz})](\text{PF}_6)_4 \cdot 5.5\text{H}_2\text{O}$, $\text{C}_{88}\text{H}_{87}\text{N}_{14}\text{O}_5.5\text{Ru}_2\text{P}_4\text{F}_{24}$ Calculated: C; 47.93, H; 3.97, N; 8.89. Found C; 47.92, H; 3.83, N; 8.82. Accurate mass analysis: $\text{C}_{88}\text{H}_{76}\text{N}_{14}[\text{102Ru}]_2^{4+}$ Calculated 383.1111. Found 383.1112.

S-1c. Anion metathesis

The hexafluorophosphate salt of each complex was dissolved in the minimum volume of acetone, and a saturated solution of tetrabutylammonium chloride in acetone added. The resultant precipitated chloride salt was collected by filtration, washed with cold acetone, and dried *in vacuo*.
