The Chronopolitics of Exile: Hope, Heterotemporality and NGO economics along the Thai-Burma Border

Journal:	<i>Critique of Anthropology</i>
Manuscript ID	Draft
Manuscript Type:	Article
Keywords:	Chronopolitics, Geoeconomics, Geopolitics, Time, Temporality, Liminality, Exile, Neoliberalism, Political Economy, Hope
Abstract:	<p>In this article, we foreground chronopolitics—the politics of time—to examine the ways in which the heterotemporalities of Burmese exiles living in nine “temporary shelters” along the Thai-Burma (Myanmar) border mediate one of the most protracted displacement situations in the world. The imminent repatriation of these Burmese exiles, tens of thousands of whom have been waiting for decades to be resettled to an often elusive third country or to return to a peaceful Burma, has given way to a preeminent “crisis of hope”. The perception that the camps are “out of time” has diverted critical funding streams away from border-related issues and into Burma itself, which has led to a widespread shift in focus for thousands of NGOs in the region. It is within this temporal and spatial context that we argue that the chronopolitics of protracted displacement among Burmese exiles has given way to a political economy of hope deeply entangled in the geoeconomics of Burma’s “opening up” to systems of global capital. The forestalled realizations of exiles’ hopes and potential futures are inextricably linked to not only geoeconomic change, but also to the shifting foci of NGOs and stakeholders in the region towards liberalization policies and projects in Burma and away from Burma’s exile populations. In this way, along Thai-Burma border, the political economy of hope articulates with chronopolitics in ways that shed new light on the politics and temporalities of refugeedom.</p>

The Chronopolitics of Exile: Hope, Heterotemporality and NGO Economics along the Thai-Burma Border

Introduction

I am sitting in a small cramped bedroom speaking with Dee¹, a refugee from the Shan State in Burma who was forced to flee in 2006 when war broke out in her village between Burmese soldiers and the Shan State Army. I ask whether she thinks she will ever go back to Burma. She becomes tearful before replying, “No. I will die in Thailand! It is difficult here too, but more difficult in Burma. So difficult, why is it so difficult? [...] Life is like a black tunnel. We walk through it and we can’t see in front of us. We don’t know what is on the other side. Our life is like this—everything is difficult to understand (excerpt from field notes).

More than 140,000 Burmese exiles currently live in the nine camps linking the Thai-Burma² (Myanmar) border (UNHCR, 2013, Rogers, 2012, Myint-U, 2011, Myint-U, 1997). Standing as one of the most protracted displacement situations in the world, the camps have been in operation since the late 1980s (Banki and Lang, 2008). Despite the longevity of the camps, they are officially referred to as “temporary shelters” (UNHCR, 2013). In 2005 UNHCR stopped registering Burmese³ refugees in Thailand which has since led to a mobility stalemate for individuals and families who have lived in the camps for up to three generations (Horstmann, 2014, Arnold and Pickles, 2011).⁴ Thus, despite their precarious situation, most Burmese exiles including economic migrants and political refugees lack refugee status (Arnold, 2013: 89).⁵ In

¹ All names of research collaborators herein, are pseudonyms. We intentionally do not mention specific names, places or pieces of biographical information that could lead to the identification of specific individuals who have participated in this study out of respect for their privacy and concern for their personal safety.

² The country’s official name was changed from Burma to Myanmar in 1989, yet not without controversy. While this name change has been accepted by most nations and international organizations, some countries continue to refer to the country as Burma. We retain the name Burma in this article because it is the name most commonly used by research collaborators and it is arguably more familiar to most readers. (cf. SAHABU, V., WEARING, S. & GRABOWSKI, S. 2011. Exploring 'Religiosity' As an Influence in the Motivations of Volunteer Tourists.

³ Importantly, exiles from Burma include a wide variety of ethnic and religious backgrounds. The Burmese government officially recognizes 135 ethnic “races,” though this figure is contested by ethnic minority groups, like the Shan (Tai), who argue that the actual number is closer to 70 (Gamanii 2012). They point out that the military regime has attempted to unnecessarily divide groups or have even counted some groups twice, and this is “evidence of its lack of credibility and incompetence in counting the ethnic groups of the country it is governing” (Gamanii 2012). For the purposes of this article, we describe all exiles and residents in Thailand who were born in Burma as “Burmese” or “Burmese exiles” to indicate the research collaborators’ country of origin rather than their ethnic or religious identity and the category most widely used in Thailand. The ethnonym Burman refers to the people belonging to the ethnic majority group of Burmans and not any other ethnic minority group.

⁴ In addition to the politics of the “refugee” category and its associated function of inclusion and exclusion, the refugee category in Thailand is further politicized because of the closing of refugee registration 2005. Yet, Burmese in Thailand often refer to almost all Burmese in the country as “refugees” despite their official status.

⁵ In Thailand, an official refugee is a person who is formally registered through UNHCR. While the term “refugee” is widely used among Burmese exiles to refer to all exiled peoples, Banki and Lane point out how displaced people

1
2
3 addition to lacking official protections as refugees, exiles' futures are compromised by the
4 region's NGOs increasingly refocusing their efforts away from the border areas to issues inside
5 Burma. In late 2014 the Thai junta announced plans to repatriate all camp residents to Burma by
6 the end of 2015 (Naing, 2014a, Naing, 2014b). Meanwhile, media and academic reports from the
7 border area indicate Burmese exiles' fear of oppression upon their return to villages, many of
8 which are reported to be surrounded by unexploded ordnances (UOs) and land mines (Nallu,
9 2012). As a result, tens of thousands of exiles face a potential return to razed agricultural fields,
10 torched homes and ongoing fighting in the area of proposed resettlement. Thus, UNHCR's
11 commitment to non-refoulement—the principle of a refugee's right to reject forced return to a
12 homeland in the event that real danger to life and livelihood persist there—is challenged by
13 current expectations for repatriation by international governments, agencies and donors.

23
24 Indicative of the changing relationship between Burma and the West are the recent visits
25 to the country by numerous high-profile political leaders, including Barack Obama, Hillary
26 Clinton and former UK Foreign Secretary William Hague (Kohler, 2012). These visits took place
27 in the context of recent political reforms in Burma, which include the election of Aung San Suu
28 Kyi to Parliament, the lifting of economic sanctions by many Western countries, and the release
29 of thousands of political prisoners. Coupled with widespread geoeconomic hope⁶ for the country,
30 these reforms also compromise Burmese exiles' aspirations for a safe and secure future because
31 of large-scale foreign investment that benefits only a small minority of the population. It has also
32 been noted that “[b]usinesses are interested in Burma because the country is rich in natural
33 resources and has a vast pool of young people eager to work and to consume” (Tripathi, 2012).
34 Yet, these investments occur within the contexts of persistent land dispossession, ethnic cleaning
35 in several border regions and human rights abuses, realities that are most severe in the “ethnic
36 areas” outside the urban capital centers of Yangon and Mandalay. And yet Burmese victims of
37 the world's longest civil war continue to cross the border into Thailand, an act that contributes to
38 a blurred distinction between political and economic migration where migration in general is
39
40

51 along the Thai-Burma border include “refugees and internally displaced persons, inside-camp and outside camp
52 populations, and recognized and undocumented migrants” (p. 59) (cf. SAHABU, V., WEARING, S. &
53 GRABOWSKI, S. 2011. Exploring 'Religiosity' As an Influence in the Motivations of Volunteer Tourists.)

54 ⁶ We use the term ‘geoeconomic hope’ here to refer to the positive aspirations for the future that are based on
55 changes made in the world to secure peace and freedom, often through free-market reforms. This is often expressed
56 as a discourse about the “inevitably inclusive and expansive aspects of capitalist globalization” which are situated in
57 “a world where global free-market integration is promoted as the solution to all distress and disgruntlement”
58 (Sparke, 2007: 344).

1
2
3 perceived as “a form of resistance to or avoidance of the Burmese state” (Arnold, 2013: 92).
4
5 Thus, an estimated two to three million Burmese political refugees and economic migrants living
6 and working in Thailand (Naing, 2014a, Arnold, 2013, Lamb, 2014).⁷ Ongoing tensions between
7 what Arnold refers to as “‘democratization from above’ and migrancy ‘from below’” in areas
8 along the border such as Mae Sot in Tak province which have become a center of exiled
9 democracy activities as well as a globally linked political center (Arnold, 2013: 90). In addition
10 to becoming significant sites of protest, the Thai-Burma border areas have also become
11 important geographies which “are mobilized as economic barriers and filters to the perceived
12 contamination of migrant workers and the growing social instabilities, both real and
13 misconceived, they create” (2011: 1619).

22 In this article we examine this crisis of protracted displacement through the lens of hope
23 as a temporal analytic, using what Sparke (2012: 338) refers to as a “grounded approach” to
24 studying hope. Hope, as Mattingly (2010: 6) has put it, “most centrally involves the *practice* of
25 creating, or trying to create, lives worth living in the midst of suffering, even with no happy
26 ending in sight.” As a process and a practice, hope remains “an existential problem [that] takes
27 cultural and structural root as it is shaped by poverty, racism, and bodily suffering” (ibid: 6).
28 Marxist philosopher Ernest Bloch the concept of “not yet” or the “anticipatory drive of the ‘not
29 yet conscious,’ that is, on the capacity of ‘what has not yet become’ to move a present moment
30 forward (Bloch 1986: 115-116 cited Miyazaki 2005: 248). As a critical affective competency of
31 exiled experience, hope is often deployed instrumentally in order to better social, economic and
32 political futures. At the same time, hope is also a phenomenological temporality that both shapes
33 perspectives on the future as well as frames and mediates (and, in fact, may often *produce*) the
34 struggles between possibility, probability and eventuality (Appadurai, 2013, Richard and
35 Rudnykyj, 2009, Miyazaki, 2006). In northern Thailand, senses of hope and futurity among
36 Burmese exiles are entangled in the political economic future of Burma as well as in the
37 everyday affective encounters with NGO practitioners (Watanabe, 2014, Watanabe, 2013). This
38 article also examines how affective experiences of hope are practiced, represented and
39 (re)produced by both Burmese exiles and NGO practitioners. Through this lens of hope as
40 a practice, we engage with emerging theories in the anthropology of the future and politics of
41 hope (Appadurai, 2013) as they are inflected through heavily politicized temporalities.

3 Rachel Pain cautions us against “classifying emotions as either locally or globally
4 produced,” suggesting instead that we consider how emotions are experienced by people both in
5 ways that are at once global *and* local (Pain, 2009: 476). Discourses around the scalar and binary
6 relationship between the local and the global tend to presume an inevitable effect of the global on
7 the local and the expansion of neoliberal global capitalism. By disrupting these discourses
8 through linking the everyday affective experiences of Burmese exiles with the changing political
9 economy of NGOs and transnational geopolitical discourses about Burma, we may begin to
10 construct a more nuanced picture of the complex relationship between this artificial binary (Pain,
11 2009: 476). In examining the ways in which affect structures the political rather than how
12 politics structure affects, we are concerned with the role that affect plays in facilitating economic
13 transformations. Specifically, we want to explore here how affect, as an intersubjective and
14 reflexive experience, is co-constructed through relationships with NGO practitioners as well as
15 through political discourse and action with the aim of cultivating hope (Richard and Rudnycky
16 2009: 61, 57). Our reading of the politics of exilic time is grounded in a hermeneutics that sees
17 affect as “critical to producing the subjects of contemporary political economic transformations”
18 (ibid: 61). In order to link these political, economic and affective transformations, then, we build
19 on the emerging body of work in critical geopolitics and illustrate how they such shifts play a
20 key role in the development of the geoeconomics of hope.

36 This article proceeds as follows. We begin by theorizing the relationship between exilic
37 time, chronopolitics and hope for the future. Burma, widely represented as a “timeless” state due
38 to its limited incorporation into the global capitalist economy, is now “opening up” to foreign
39 investment and trade. We therefore consider how NGOs working along the Thai-Burma border
40 are constrained by the rapid refocus of international aid to Burma and away from the border.
41 This donor transfer has contributed to the widespread migration of NGOs out of the border area
42 and into Burma. This contributes to what we call “NGO economics”, or the relationship between
43 NGOs, broader geoeconomic discourse and temporal enclosures. Then, we discuss how
44 conceptualisations of both temporality and hope—and their linkages—can augment
45 geoeconomic understandings of crises of exile in the Thai-Burma border area. Finally, we
46 consider how the political economy of hope articulates with the chronopolitics of exile among
47 the Burmese, offering insights into how the temporally mediated geoeconomics of hope dictate
48 not just present understandings of what the future holds, but also how the future itself might play

3 out. In this way, we illustrate how, along the Thai-Burma border, the political economy of hope
4 articulates with chronopolitics in ways that shed new light on the politics of refugeedom.
5
6

7 Methods used for the research in this article include ethnographic fieldwork with
8 Burmese exiles and expatriates residing in northern Thailand and in the United States, interviews
9 with NGO practitioners, as well as discourse analyses of online media, including blogs,
10 magazines and newspapers. Research, which took place between 2009 and 2015, comprised 90
11 semi-structured interviews, oral history narratives and casual conversations (including in-person,
12 phone and Skype communications). Data was analyzed using a critical phenomenological
13 framework (Willen, 2007, Cresswell, 2013). Critical phenomenology links the phenomenal with
14 the political (Good, 1994) in attending to “the many, and often highly charged political, social,
15 and discursive forces that contribute to life in particular settings” (Desjarlais and Throop, 2011:
16 93). Critical phenomenology is an appropriate interpretive framework for examining linkages
17 between popular geopolitical discourses about Burma as a “timeless” state and its opening up to
18 the global stage, and the temporal implications of this process, both for Burmese exiles and for
19 NGOs. While in the field, the authors not only carried out participant observation with research
20 collaborators, but also volunteered with NGOs and as members of activist organizations, and
21 worked as teachers to exiles. Our methodological framework of critical phenomenology, paired
22 with critical ethnography (Madison, 2011) “recognizes the macro structural dimensions of our
23 social existence (the way discursive regimes are embodied and played out in everyday social
24 practice)” while also “foreground[ing] the personal, intimate, singular, and eventful qualities of
25 social life” (Mattingly, 2010: 7). Such a phenomenological ethnography, furthermore, can be an
26 effective means of sensitizing officials, development agencies and the wider public (to say
27 nothing of anthropologists themselves) to the complex, anxiety-filled and often seemingly
28 “hopeless” everyday and existential realities of the condition of exile (Willen, 2007).

46 **Exilic Time and Chronopolitics**

47
48
49 Though temporality has long been a fundamental phenomenological consideration for
50 anthropologists working in small-scale societies (see Mauss, 2004[1905], Evans-Pritchard,
51 1969), it has only recently experienced renewed interest among scholars of migration and exile
52 (Bastian, 2011). While research on migration has long focused on the spatial elements of
53 migration trajectories instead of their temporal connections (Griffiths et al., 2012), the temporal
54
55
56
57
58
59
60

1
2
3 enclosures of a range of migration-related phenomena, not least of all states of transience and
4 limbo, can reveal much about both the processes of being, becoming and belonging among actors
5 implicated in processes of migration as well as the discursive articulation of temporal
6 incongruities (c.f. Miyazaki, 2003). As Miyazaki explains, temporal incongruities create tension
7 between knowledge and its objects. In the case of refugeedom, being physically bounded creates
8 a shared sense of temporal suspension out of capitalistic time through restricted access to what
9 James Ferguson refers to as the “grid of modernity”. Ferguson writes about how, while linked up
10 with the grid of modernity, people of the Zambian copperbelt were hopeful to participate in
11 modernity through their links with global capital. Yet, disconnected from the grid through
12 neoliberal reform and environmental degradation, these hopes quickly led to widespread feelings
13 of abjection and temporal stagnation (Ferguson, 1999, Ferguson, 2002).

14
15
16
17
18
19
20
21
22
23
24 Hutchings (2013) terms the multiple grand temporalities of progress, decline and cycle
25 “heterotemporality”, that is to say a temporal plurality within the contemporary geopolitical
26 imagination and discourse. Heterotemporality refutes the idea that there is a single meta-
27 narrative of time determining contemporary temporal experience, and instead espouses a “mutual
28 contamination of ‘nows’ that participate in a variety of temporal trajectories” (Peck, 2013: 166).
29 While movement of peoples has been common to human societies for millennia (Cohen, 1995),
30 the supposition that stasis is the norm, and movement an aberration, dates at least as far back as
31 the colonial era, when a sedentary bias (Malkki, 1995a, Bakewell, 2008) was co-opted by state
32 institutions to argue that movement among poor and disadvantaged groups threatened the
33 dominant public order. Such binaries constructed between the mobile and the immobile, and the
34 artificiality of the borders often drawn between them, date back even earlier, to (at least) pre-
35 Renaissance Europe (Anderson, 2013). Even today, prevailing discourse about refugees often
36 describes time in exile as “standing still,” “suspended” or “uchronic”, which refers to a time of
37 historical stagnation, or to the condition of “nothing happening” (Malkki, 1995b, Coutin, 1999).
38 Such spatial associations are reproduced not just by images and imaginations of liminal actors,
39 but by the very structures of the state bureaucracies in which they are embedded.

de passage by articulating in-between spaces that themselves became social structures in which individual components create their own space and time distinct from the spatial and temporal experiences of everyday life. These liminal moments expose the legal state of limbo and insecurity that arises when a person is stateless or living outside their legal country of origin (Turner 1969). No longer merely a point on a path of transition, then, exilic liminality is a state of being which offers “no cultural assurance of a final stable resolution of ambiguity” (Turner, 1974: 233). The liminal character of the lives of migrants, refugees and persons in exile, then, arises from both their marginality *and* the temporariness of their experiences. Such “involuntary immobility” is particularly germane to the experiences of persons who wish to move out of their stasis but are unable to do so (Carling, 2002, Vigh, 2009). The condition of statelessness and displacement similarly conjures a repertoire of images of the refugee in a liminal, uchronic state. This view of time as standing still is embedded in discourses of refugeedom that centers on the notion of “bare life” (Sylvester, 2006), where political time ceases to pass after having entered the liminal space of the camp.

But in-between times are more complicated than simple notions of the liminal will allow. In her work on Hutu refugees in Tanzania, Lisa Malkki shows how actors both inside and outside a Hutu camp construct multiple and differing notions of Hutu time. Inside the camp, Hutus fixate on images of the Hutu nation, traditions and “mythico-history” (Malkki, 1995b: 14). Those living outside the camps challenge and deconstruct such essentializing categories, choosing instead to adopt the language and customs of their new host culture (ibid). Inside, time is suspended such that the idea of a timeless nation for Hutus becomes reified; outside, ‘unofficial’ refugees adapt to the temporal rhythms of their host nation, assimilating new cultural and economic systems. Malkki suggests that is it the universal language of human suffering used by the NGOs who run the camps that creates the ubiquitous image of the uchronic, depoliticized camp-dwelling refugee (Malkki, 1996, Malkki, 1995a). Such homogenizing, humanitarian language looks beyond the immediate sociopolitical circumstances of migration, while “erasing the specific historical, local politics of particular refugees, and retreating instead to the depoliticizing, dehistoricizing register of a more abstract and universal suffering” (Malkki, 1995b: 13). The uchronia induced by the creation of “temporary shelter areas” in the Thai-Burma border-zone depoliticizes and pacifies large groups of persecuted peoples. Their lives have become paused indefinitely, and indeed without access to secondary education, work or the ‘normal’ rhythms of a person’s life course

1
2
3 (or, in fact, everyday life), it is easy to see both the camp, and exile itself, as geographies of
4 grand temporal disruption.
5
6

7
8 Opening up space for a heterogeneous chronopolitics, as Malkki's example elucidates,
9 allows for new understandings of time as "repetitions of difference," or that which is repeated
10 beyond hegemonic temporal structures (Deleuze, 1994). The charge of a critical geopolitics that
11 views time and space as inseparable units of analysis encourages us to perceive the times of
12 exile, such as the time spent in "temporary shelter areas," as existing on an equal plane with so-
13 called "modern" time. Understanding exilic time as being equivalent in importance to national
14 time (or other temporalities for that matter), encourages us to view exilic time not as a state of
15 exception, but as a necessary counterpart to nationalistic and capitalist times.
16

23 **Border temporalities and NGO economics**

24
25 Long one of the most secluded countries in the world, Burma continues to be
26 essentialized in the Western imagination via a pervasive Orientalism. Following scholars such as
27 Edward Said and Johannes Fabian, the temporal tropes of Burma as the timeless other ascribes
28 mysterious, unspoiled and atemporal characteristics to the land and its people (Fabian 2014;
29 Rogers, 2012; Said 1979). After 60 years of isolationist policies and foreign sanctions, the
30 country is now rapidly liberalizing and internationalizing its economy and, arguably, beginning
31 the work of adhering to a Western human rights regime. Still, Western governments and NGO
32 and human rights organizations remain cautiously optimistic of Burma's eventual
33 democratization and "progress," as numerous recent articles attest (U.S. Campaign for Burma,
34 2013). Among other critical shifts in foreign policy, the termination of the U.S. resettlement
35 program, rapid expansion of the Burmese tourism industry as well as international investment
36 from countries such as China, Germany and the U.S. together have contributed to a heightened
37 geopolitics of fear among Burmese exiles. The U.S. Campaign for Burma explains that, given its
38 ranking of 181 (out of 183) countries in the Corruption Perception Index, "it's hard to believe
39 that the government will do legitimate business with foreigners" (U.S. Campaign for Burma,
40 2013). Yet, the recent U.S. move into Burma represents what Naomi Klein has described as
41 "privatization in disguise" (cited in Sparke, 2007: 345). In this way, the democratization of
42 Burma speaks to a new chapter in the saga of displacement of Burmese exiles in Thailand.

The announcement in January of 2014 that the U.S. would end its group resettlement program for Burmese refugees in camps along the Thai-Burma border was made in the context of the rapid opening up of Burma's economy. The U.S., which operates one of the largest resettlement programs in the world, has been the most substantial recipient of documented Burmese refugees from camps along the Thai-Burma border, accepting more than 73,000 Burmese for resettlement in American towns and cities (UNHCR 2014). By comparison, all other receiving countries accepted a combined total of 19,000 refugees (UNHCR 2014) The U.S. has such a strong ideological presence along the border that when asked if he knew which organizations supported exiles, Htway, a Burmese research collaborator and long time resident of northern Thailand explained: "I don't know. I only know USA supporting us. There could be various organizations ... I think or I am hoping that they are helping us to get out of refugee life." As a result of the closing of the American program, aid-workers and NGOs are preparing for an imminent repatriation of refugees—in this case, not a return, but rather a delivery into a new and even more uncertain future.

NGO practitioners as well as Burmese residents in Thailand were invariably devastated about the closing of the U.S. group resettlement program. Several days after the announcement several Burmese collaborators explained how they had lost their hope for the future. Dara, a middle aged man and father of three explained, "How can I feel, yeah, how can I feel? I'm hopeless." This sentiment was shared by Chit, who explained, "I really wish to settle in a place where both I and my husband can have a peaceful, stable and secure life where we can practice what we believe in terms of religion. We want to go to a place where we can have social security... we never have a security for life at all. We lived our whole life amid the gunfire and motor explosion. We are traumatized by it." After decades of dependency not just on Western aid, the very hope produced by the protracted nature of the camps and the lure of the resettlement program receded. Indeed, UNHCR spokeswoman Vivian Tan told *DVB* that, "The majority of the respondents said they preferred either resettlement to a third country or to stay in Thailand." However, Tan also reported that over half of those who had no desire to return to Burma had never actually been registered as refugees and would thus not even be eligible to apply for resettlement regardless (Solomon, 2014).

55
56
57
58
59
60
In this context, Bridgette, an American NGO practitioner noted that, since the announcement that resettlement programs were closing and refugees would soon be repatriated, a

generalized sense of fear and uncertainty has taken over the exile community, especially in the border area. The termination of the resettlement program is expected to break apart families, perhaps permanently, as only individuals with verified identities will be allowed to resettle in host nations. This situation was reiterated many times over during our interviews. One Burmese family, for example, described how they had been separated from their three children who still live in a camp along the border. They explained that they now live with their youngest son in Melbourne, Australia and were on a return visit to the camp where their three older children have lived with extended family members for more than four years. Their older children's lack of official birth documents meant that they were not eligible for refugee status and thus could not move with their parents and younger sibling.

The deputy secretary of Mae La camp, the largest such camp in Thailand, with more than 40,000 residents, explained in an interview with *The Irrawaddy*, that the imminent forced repatriation would be a violation of Burmese exiles' human rights. An outspoken critic of the repatriation process, she explained how repatriation can be forced, but not without significant human rights abuses. Citing ongoing conflicts throughout several regions in Burma, she explained that the process would put tens of thousands of lives in danger. Burmese exile's acceptance of insecurity and precariousness in the present is based in large part on the belief that one day they would be resettled. Talk among the exiled community in Thailand of reduced rations in the camps have contributed to intensified fear among its residents. Arun, a part-time camp resident explained how each month he receives only 18kg of rice, a common staple in the camps, which marks a significant reduction from previous rations. Arun was not optimistic regarding the prospect of NGOs continuing to leave the border area. "We are not able to survive on our own at this moment," he explained. "We are not in good shape to make a living on our own yet. I don't think we can live without them." Arun further highlighted how he would like others to know that the reduction in food rations, as well as the presence of NGOs in the border area, has already contributed to increased social and economic problems for many exiles. Without enough food, he explained, people have turned to selling drugs and engaging in prostitution and gambling within the camps themselves.

Critically, imminent repatriation has resulted in a mass exodus of funding opportunities from along the border as aid agencies and funders shift their focus to working inside Burma itself. It has been widely suggested by members of the NGO community that it is "only a matter

1
2
3 of time” before the border exile population is forced back to Burma. For example, when asked
4 about the funding situation along the border, Erica, an Australian NGO practitioner explained the
5 situation like this: “I think anyone and everyone is trying to get in; that is where the money is,
6 ourselves included. Like I’ve said we had to look at potentially moving inside. But the big ones
7 definitely, it’s hard for CBOs [community based organizations]... there are many difficulties
8 faced by CBOs on the border as the money is going inside. And also, once the money goes
9 inside, again the military has great power to control where that money is designated. Once you
10 are inside, once your foot is in that door, in many ways, you are beholden to their agenda.”
11 Similarly, when asked if recent events have affected funding, Meagan, an American NGO
12 practitioner explained how her NGO was attempting to send the message that it was not yet safe
13 for Burmese exiles to return. This was especially true for Burmese exiles thought to be involved
14 in political movements inside Burma. Fiona, a German NGO practitioner, described how funding
15 from an Australian donor was threatened by the perception that Burma was “okay now.” She
16 explained: “we are trying to fight the perception particularly in the West that everything is okay
17 in Burma, there is change now, and it is kind of opening up. So we are trying to get the message
18 out what the impacts of change on our organization has been that, even though the country is
19 opening up extensively, what it has done is made it easier for people to travel in...”

27
28
29
30
31
32

33 James Igoe (this issue) draws on Spinozan philosophy in distinguishing between *potentia*,
34 the inherent power to act and create, and *potestas*, the ability to separate something from its
35 capacity to act in its own interest. He argues that the ongoing struggle between *potentia* and
36 *potestas* is a key aspect in the struggle for NGOs to realize their social and economic
37 development goals. Igoe writes that the temporalities of funding cycles can demand a series of
38 conditions on NGOs, who must then “negotiate temporal inconsistencies of globally circulating
39 resources and local self-determination” (this issue). This tension is clearly illustrated along the
40 Thai-Burma border where thousands of NGOs work to advance the social, political and
41 economic rights of ethnic minority groups from Burma, resulting in a highly competitive funding
42 environment (Hyndman, 2002, Vogler, 2007). Nadia, the director of a CBO in Northern
43 Thailand, insists that she refuses to accept funding from sources other than individual donors,
44 since they invariably come with “strings attached.” As she explains, “If I were reliant upon, say
45 the Norwegian government for funding, they could easily put things in extreme upheaval if they
46 suddenly decide to stop funding for rice or something similar.” But many NGOs are not
47

1
2
3 community-based and to rely on large donations from foreign nations, companies and individual
4 donors in order to remain in operation. In response to widespread reports of the increasingly
5 supposed democratic and free-market face of Burma, many NGOs along the border struggle for
6 economic viability as international funds progressively move into the country. As a result, big
7 international NGOs (BINGOs), that align themselves with international and governmental
8 donors in order to attract critical financial support, are moving their operations inside Burma,
9 leaving smaller, grassroots NGOs along the Thai-Burma border to deal with the (no longer
10 profitable or 'sexy') current repatriation crisis. So, as BINGOs "follow the money" and smaller
11 NGOs tend to lack funding as well comparable influence and capacity, many exiles who have bet
12 their hopes on the promissory note of resettlement find they are left to fend for themselves.

The Political Economy of Hope on the Border

22
23

24 The political economy of hope comprises what Bloch referred to as 'the warm stream' of
25 human history—a series of affective notions including liberation, fulfilment and utopia—that
26 became enveloped under the 'cold stream' of consumer-capitalist "economic reductionism form"
27 (Thompson, 2013: 1). Bloch's analysis of the attainment of hope in a material(ist) world
28 addresses the ever-present disjuncture between the objective possibility of hope ("that which can
29 appear in history as determined by historical-materialist conditions") on one hand and the
30 always-present hope/aspirations of human becoming (that which may become possible) on the
31 other (Thompson, 2013: 4). This focus on hope has arisen in part as a result of the shift to post-
32 war neoliberal capitalist ways of living, in which "happiness and optimism [are] now counted in
33 cold hard cash and commodities," and which compels us to ask whether hope still exists in
34 "anything other than an atomized, desocialized, and privatized form" (Thompson, 2013: 1,5).
35

41
42
43

44 Promises broken by geopolitical or geoeconomic flights of fancy have critical
45 ramifications for those who have become dependent on such promises as beacons for the future.
46 Perceptions of the temporal incongruity of markets being "behind" meditate widespread
47 projections of Burma's markets "catching up" to other capitalist markets in the region
48 (Rudnyckyj, 2009). Along the Thai-Burma border, the politics of refugeedom are embedded in a
49 broader political economy of hope (Miyazaki, 2013, Miyazaki, 2010). The political economy of
50 hope highlights the relationship between one's expectations and understanding of the capacity
51 for political and economic structures to govern one's perception of what is possible while placing
52
53
54
55
56
57
58
59
60

1
2
3 markedly less emphasis on what is probable. Appadurai (2013: 126) describes the strategies
4 employed by residents of Mumbai's Dharavi slums in their struggle against states of politically-
5 grounded emergency and exception as a "politics of waiting". He explains that in such contexts,
6 hope can be seen as "the force that converts the passive condition of 'waiting for' to the active
7 condition of 'waiting to'. This process will assure that "the end of the rainbow is not a broken
8 promise" (Appadurai, 2013: 127).
9

10
11
12
13
14 Within politically-governed resettlement programs, the privileging of Burmese exiles
15 from particular ethnic groups or with family already living overseas has institutionalized
16 discriminatory practices that limit hopes of resettlement for certain members of the population.
17 The Tai (also called Shan) peoples, who despite being both the largest minority group in Burma
18 and largest group of Burmese migrant workers to Thailand, have never been afforded official
19 refugee status either by the UNHCR or the Thai government. Many Tai research collaborators
20 we spoke to maintain that Western NGOs and IOs are only interested in working with minority
21 groups who are willing to convert to Christianity. These groups, they suggest, include the Karen
22 peoples, who, unlike the Buddhist Tai, have mostly converted to Christianity and subsequently
23 benefitted from missionary organizations lobbying on their behalves. Lung Pho, an unrecognized
24 Tai refugee who had to flee violence and internal displacement in the Shan State of Burma says,
25 "Yes we want to go back. My mother father and siblings live there [Burma]. If we go and can
26 live and have enough to eat we will go. All Tai people want to go back. But as long as the
27 Burmese military does bad things we will not go back." In this way, the imminent resettlement of
28 certain ethnicities of Burmese exiles is contrasted with the experience of others who lack a
29 similar optimism about their hope for a future in Burma, or what is likely far less attainable,
30 another country other than Thailand. Additionally, access to social networks of resettled people
31 through familial ties is another point of optimism for some.
32
33
34
35
36
37
38
39
40
41
42
43
44
45

46 Describing what they hoped for, research collaborators almost invariably stated that they
47 hoped for a future in a Third Country but that keeping this hope alive was, for many, an ongoing
48 challenge, especially following the announcement of the closing of the resettlement program.
49 Reporting on his conversations with Burmese in the border area, Myo, a Burmese NGO
50 practitioner and journalist as well as a former political prisoner and camp resident explained:
51 "They told me that they are so hopeless. 'We have no tomorrow. What the fuck life?' Something
52 like that..." Explaining this situation, Matilde, a German NGO coordinator commented, "I think
53
54
55
56
57
58
59
60

1
2
3 they feel they've been neglected in the past... and that things will get worse in the future.
4
5 Unfortunately, some of them also feel it's their 'karma' and nothing can be done about this.
6
7 There's a lot of disenchantment and hopelessness, which will be very difficult to overcome.”
8

9 The “temporality of no hope” (Miyazaki 2005) along the Thai-Burma border is
10 widespread. This lack of hope is in part mediated by the affective relations between NGO
11 practitioners and Burmese whose relations are increasingly unpredictable. Hope seems a
12 particular improbability along the Thai-Burma border in the midst of volatile changes to the
13 material conditions of exile's lives, whereby refugees in the camps depend on aid from NGOs
14 with shifting agendas for necessities such as rice and water, while those living outside the camps
15 are exploited in Thailand's burgeoning manufacturing economy and service and sex industries.
16 Where fear, insecurity and destitution are tantamount, hope is the affect of the dispossessed.
17 Auyero and Swinston, writing about the corporate- and government-created precariousness in an
18 Argentine shantytown, calls the confusion produced by ever-changing policies surrounding
19 people's future and environment, “the social production of toxic uncertainty”, whereby hope and
20 the routines of everyday survival become essential strategies for “overcoming the uncertainty
21 inherent in living in a place that has always been about to be vacated...” (2009: 140).
22
23
24
25
26
27
28
29
30
31

32 Both NGO and government practitioners are intimately entangled in the management of
33 hope among their benefactors. The very capacity of people to aspire is distributed in unequal
34 forms (Miyazaki, 2010) and as a result, there must be a productive and “disciplined dialogue
35 between the pressures of catastrophe and the disciplines of patience” in order for hope to
36 exist (Appadurai, 2013: 127). Moreover, hope in late capitalism is often tied to the capacity for
37 collective envisioning of the future. For example, Ghassan Hage refers to capitalist society as a
38 shrinking society which is “characterised by deep inequality in their distribution of hope, and
39 when such inequality reaches an extreme, certain groups are not offered any hope at all” (Hage,
40 2003: 17, cited in Miyazaki 2009: 238). Similarly, Watanabe illustrates how “collective
41 intimacy” among Japanese and Burmese aid workers contributed to the unmaking of individual
42 subjects through the creation of a collective hope for community and national development
43 (Watanabe, 2013: 650) Yet, long-term displacement contributes to fragmented forms of
44 collective intimacy whereby uncertain and unstable relations become the norm. When asked how
45 much time he believed it would take for him to realize his hopes of living a peaceful existence
46 without the threat of war and violence, Aung explained, “I got here [northern Thailand] in 2006.

3 It has been over 10 years now. I don't know how long it's going to take. It all depends on those
4 organizations which are dealing with our situation". Htut, like many Burmese exiles, explained
5 that he didn't want to return to Burma: "I don't want to go back to Burma because I am a former
6 political prisoner and I also I have no house, no land, no money, and, especially because I have a
7 problem with my eyes... Finally, I would like to state that this U.S. policy will force us back to
8 Burma." Similarly, Htay, who has been waiting to be resettled in America since 1994, explained,
9 "It's taking too long already. I am very unhappy. I feel like there is nothing to hope for apart
10 from getting old."

Hope that is politically organized, Appadurai argues, "mediates between emergency and
patience and produces in bare citizens the internal resources to see themselves as active
participants in the very process of waiting" (Appadurai, 2013: 127). If the precarious and
insecure trajectory from bare citizenship to active, political citizenship "produces a toxic and
permanent state of uncertainty about the journey," this toxicity can be mollified via a
demonstrated trust from above (ibid: 128). Hope is produced by the suspension of time for
refugees living a life in waiting—waiting to be resettled abroad, waiting to receive national (e.g.
Thai) identity cards, for a wage increase, for an opportunity to go to school, to receive medical
care or to return to a peaceful Burma. As in the Argentine shantytown described by Auyero and
Swiston, "waiting is one of the ways in which residents experience submission" (2009: 6). One
key weapon to be employed in the politics of hope is the setting of precedents, which can present
the hopeful possibilities of cooperation, collaboration (and indeed camaraderie) between the state
and its disenfranchised citizens or non-citizens. The ability to aspire and to hope "inevitably
thrives on communicative practices that extend one's own cultural horizons," allowing people to
"gain plausible access to the stories and experiences of others" (Appadurai, 2013: 213). This
imagination of possible futures and the collective expression of aspirations by disenfranchised
peoples from a plane created by vastly unequal power relationships necessitates improving
people's "collective capacity to aspire" (ibid). Thus, those who hold the power in managing
hopes and those who trade in the propagation of such hopes, hold responsibility for the
aspirations into which people have bought. NGO practitioners, often from the Global North, are
critical geopolitical actors in managing dreamt futurities among Burmese exiles in northern
Thailand. In a related vein, Watanabe illustrates how Japanese development actors working for
one of Japan's oldest NGOs in Burma are in part motivated by what he calls a "redemptive

1
2
3 dream” whereby hope for post-war national renewal through development aid is enacted. This
4 process of starting “over the process of modernity” in a developing country is experienced
5 among Japanese aid workers as an opportunity to overcome what is perceived as a widespread
6 loss of culture and alienation through a politics of temporality in which the Burmese Other is
7 seen as a vehicle for the future of Japan (Watanabe, 2013: 78). As Fabian has observed in
8 anthropology as well as popular culture, Others are often represented as temporally distant and
9 there continues to be a widespread belief that development is linked and on a predetermined
10 linear path (Fabian, 2002). Marilyn Ivy similarly suggests how notions of nation, culture,
11 phantasm and modernity are re-enacted through the cultural industries where the vanishing
12 seems to “emerge as an event across a relay of temporal deferral” (Ivy, 1995: 22). This sense of a
13 lost national authenticity then, is recaptured through discourses of the vanishing in the cultural
14 industries where national-cultural imaginary and marginalized voices enact sometimes disparate
15 national community.
16
17
18

20
21
22
23
24
25
26

27 **Chronopolitics and Futurity**

28
29 Chronopolitics calls into relief the relationship between temporality and geopolitical
30 discourse. The preeminence placed on space and place over time in popular discourse is due in
31 large part to the preeminence of territory and its conquering within the Euro-colonial
32 imagination. But as Griffiths (2013: 14) has pointed out, time is “neither independent of nor
33 external to space” (see also Hägerstrand, 1975). Moreover, it is important not to overlook the fact
34 that time is necessarily experienced in different ways by different peoples living in different
35 contexts (Frederiksen 2008). The various temporalities of given spaces are almost always
36 “doubted, contested, and mediated” among different actors (Abram, 2014: 129) since, as
37 Herzfeld points out, “regardless of how people experience time, it does seem clear that people
38 organize the passage of time in significantly divergent conceptual modalities; and that these
39 modalities are both culturally and idiosyncratically determined (Herzfeld, 2009: 109)”.

40
41 Indeed, notions of space and time are strongly bound up in individual and communal
42 identities, as much recent work by scholars of mobilities have reiterated (Biao et al., 2013, Nyiri,
43 2010, Salazar, 2011). James Ferguson writes about how, while linked up with the “grid of
44 modernity,” people of the Zambian copperbelt were hopeful to participate in modernity. Yet,
45 once disconnected from the grid through neoliberal reform and environmental degradation, these
46
47

57
58
59
60

1
2
3 hopes quickly led to widespread feelings of abjection and temporal stagnation (Ferguson, 1999,
4 Ferguson, 2002). Thus, rather than compartmentalize space and time, we see these as
5 interdependent concepts contextualized in part by affective geopolitical discourse. In this way,
6 heterogeneous temporal narratives (Klinke, 2013: 9), such as those shaped by voices expressing
7 the affects of hope and longing along the Thai-Burma border, pluralize conceptions of time that
8 have been straight-jacketed by the temporalities of both the nation-state and capital itself
9 (Harvey, 2000). By attending to the movements, voices and performative politics of peoples
10 whose experiences of time differs from those dictated by late capitalism—namely, as profit and
11 as space—it is possible to focus on exilic temporal experiences as processes of becoming and
12 unfolding, rather than periods of stagnancy, stasis and being “caught in time”.

21
22 Our Burmese research collaborators often cited disillusionment, fear and a lack of trust in
23 the possibility of an alternate future. The dearth of options for the future is frequently described
24 as intense anxiety over their uncertain predicament. Myat, for example exclaimed: “For us, we
25 have no ability to take any steps toward our future at this point. I would like to request to all
26 organizations to help us get out of our situation and to help us build a better future.” Myat’s
27 request for NGOs to stay in Thailand to continue to assist Burmese exiles is repeated by many
28 throughout the region. Myo, a Burmese NGO practitioner and reporter explained how Burmese
29 exiles in the camps have, “lost their morale. They lost their future...I feel so sorry, so sad for
30 them. That’s why I worry about them.” This is echoed by Lung Pho, an exile from the Shan State
31 in Burma who lives as a migrant worker outside the camp, “We can’t think about the future.
32 Here in Thailand we live peacefully, but don’t have rights or a voice. We all want a country, but
33 can’t speak of the future.”The lost capacity to imagine the future is a shared ambivalence about
34 the possibility of moving forward both literally and metaphorically.

45
46 The geoeconomic discourse surrounding the opening up of Burma to global capital has
47 been reinterpreted by aid donors as reduced need for exiled Burmese. Instead, there is a
48 widespread shift towards Burmese migrants “who are now a critical component to the Thai
49 economy, working light manufacturing, agriculture, fisheries and seafood processing, domestic
50 work and construction” (Arnold, 2013: 91). A Burmese activist and NGO practitioner explained
51 how “The local people are very poor... no job. Most of the people want to come to Thailand,
52 most of the people, want to come to Thailand and Malaysia and other places. So they have no
53
54
55
56
57
58
59
60

1
2
3 choice. They want money.” Similarly, Khin, an aspiring doctor who has lived in northern
4 Thailand for four years, explained that his hope was to go to medical school and return to his
5 village in Burma. He explained, “I don't have lots of hopes. My first hope is to be a medic and to
6 live with my parents and siblings. If I am a satisfied medic, I can help my community back in my
7 village”. Khin prays every day for God to help him realize this future. In a similarly optimistic
8 tone, Aye explained how, despite the renunciation of the group resettlement program, she looks
9 forward to joining her family in the U.S.: “I will have lots of things to do once I get there. I just
10 want a house and a happy life with family: that is what I look for”.

11
12 In myriad ways, the future is perceived by Burmese exiles to be a space of security where
13 one has arrived, often in a third country and/or with safe house to in with their family (Naing,
14 2014a). Additionally, the future may also seen as a space of role reversal where dependence on
15 aid agencies and NGOs will be inverted and one may become the giver instead of the benefactor
16 of aid. Hlaing exemplified this when he said: “I don't want to live my whole life with their
17 support. I will definitely try to get out of here and even be a donor one day.” Cho called for help
18 from all NGOs and foreign donors: “I just want to humbly request international organization to
19 help us to build a better future. We don't want to expect help from others forever. But we don't
20 have much choice.”

21
22 Hope is often framed as “remote, disembodied and curiously unemotional” and
23 frequently has solid grounding to “connect[s] political processes and everyday emotional
24 topographies in a less hierarchical, more enabling relationship” (Pain, 2009: 466). Pain has
25 further suggested that we look at emotions “not just as blank canvasses, waiting to be affected by
26 wider events and relations, but as situated, historicized and relational—already formed and
27 always changing—and affecting politics, as much as they are affected by politics, at a range of
28 scales” (Pain, 2009: 478). Doing so may allow us to link quotidian phenomena and subjectivities,
29 such as the everyday hope among Burmese exiles, to larger networks of privilege and power,
30 embedding hope within these networks as an affective response that is “continuously challenged,
31 resisted and reshaped” (Pain, 2009: 475). Thus, the chronopolitics of the future can be
32 understood as “embedded in cultural, economic, social and spatial micro-geographies” (Pain,
33 2009: 474). Hope and the future are inextricably entangled, since both compulsions have critical
34 considerations for society and its members. As Sparke states, “justified fears when combined
35 with sensible hopes can open new possibilities and thereby help mobilize change for the better,

2
3 including both better lives and a better world in which to live,” while “false hopes and
4 groundless fears can be of dreadful, deadly consequence” (Sparke, 2007 pp. 338). Suffering,
5 subordination and marginalization is often endured by the subaltern as it “appears logical in the
6 context” of suffering that is shaped by the interacting “invisible elbows of external power forces
7 and everyday routine survival struggles” (Auyero and Swistun, 2009: 6).
8
9

10
11
12
13 Over the past several years, there have been a multitude of traditional, hope-filled (or
14 hopeful) movements directed at toppling despotic regimes—movements that seem to present the
15 opportunity for fundamental social or political change (Thompson, 2013). The problem, as Bloch
16 sees it, is that we live in ‘the darkness of the lived moment’ (Bloch cited in Thompson 13) such
17 that we are constantly surrounded by narratives and representations of freedom and oppression,
18 failure and success, utopia and dystopia. Jammed within the ‘facticity of life’ (Bloch, 1986: 65-
19 77) ... ‘in a world based on the principles of commodity exchange, it seems as though improving
20 one’s existing life is only possible in the private sphere’ (Vidal and Schröter, 2013: 289).
21 Although geopolitics and geoeconomics operate as “alternately fearful and hopeful discourses
22 shaping [the] worldviews” (Sparke, 2007: 340) of states, positive futures are linked to economic
23 aspirations, while success and entitlement in the present is stymied by negative political
24 oppression and intimidation. How do discourses of hope fit into geoeconomic ways of
25 understanding the world? We might suggest that such discourses are often idealistic and
26 forthright in defense of geoeconomic interests, not least of all in the rhetoric of economic
27 freedom and opportunity, with global integration being the endgame.

40 **Conclusion**

41
42 In late 2014, Burmese opposition leader Aung San Suu Kyi called on the U.S.
43 government to reconsider its optimism around Burma’s political reforms (Naing, 2014d).
44 Ongoing violence in the conflict zones, the former home of most Burmese exiles in Thailand,
45 continues despite the institution of more than 16 ceasefire agreements in the region (ibid). The
46 upsurge in violence in recent months is attributed to land seizures for commercial development,
47 including large-scale dams, factory operations and environmentally damaging mining operations
48 (Lewis and Snaing, 2014), and are aggravated by Burma’s move to open its economy to new
49 markets and foreign investment. Thus, “whether the ‘new’ Myanmar is a ‘thinly disguised
50 authoritarian state’ (Lintner 2012) or a nation on the cusp of structural change remains to be
51

60

1
2
3 seen” (Arnold, 2013: 100). In the shadows of ongoing controversial reforms, more than 140,000
4
5 Burmese exiles languish in “temporary shelters” where they have waited for resettlement for
6
7 more than three decades and now face imminent repatriation to Burma. For many exiles facing
8
9 repatriation, what awaits them are razed villages, rice paddies riddled with landmines deplorable
10
11 health and education infrastructures, large-scale environmental disruptions due to damming and
12
13 mining operations, and an ongoing civil war between the Burmese military and ethnic rebel
14
15 armies.

16
17 This article has responded to recent calls by scholars to reignite debates on temporality
18
19 and precariousness, and the relationship of the experience of time to the geopolitics of migration,
20
21 refugeedom and exile. In particular, it has sought to articulate new ways of thinking through the
22
23 relationship between chronopolitics, hope and the political economy of the future. By
24
25 foregrounding the political-emotional competencies of hope along the Thai-Burma we have
26
27 sought to open up space for a heterogeneous chronopolitics that is both critically political as well
28
29 as personal. The chronopolitics of exile are complicated by the geoeconomics of hope around
30
31 intensified incorporation of Burma into global capitalism. As the U.S. National Security Strategy
32
33 of 2002 stated, “[T]he United States will use this moment of opportunity to extend the benefits of
34
35 freedom across the globe. We will actively work to bring the hope of democracy, development,
36
37 free markets and free trade to every corner of the world” (National Security Strategy 2002,
38
39 preface cited in Sparke, 2007: 345). Yet geoeconomic worldviews also thrive on their dark
40
41 foundations, playing on people’s hopes and co-opting “fetishistic fears about dangerous spaces
42
43 and others’ places to create a forceful, albeit forcefully misleading and contradictory, double-
44
45 vision” (ibid: 340). In this context, NGOs who work in the border area are hamstrung by the
46
47 chronopolitics around the hope for Burma’s economic future. Many onlookers argue that aid
48
49 donors are overly optimistic of the reforms taking place while reports of one step forward and
50
51 two steps back continue to canvass news reports on the region.

52
53 The persistence and importance of chronopolitics along the Thai-Burma border are
54
55 illustrative of how NGO economics are entangled in geopolitical discourse. It also highlights
56
57 how everyday affective geopolitics are linked to geoeconomics, extended through the stretching
58
59 of transnational financial exchange. NGO practitioners working for the betterment of Burmese
60
61 exiles along the Thai-Burma border are cognizant that there is still widespread need for their

1
2
3 labour, and critical work still to be done in the region. Yet donors have made a beeline into
4 Burma, where they jostle for space with investors from around the world in the now-crowded
5 businesses districts in Yangon.
6
7

8
9 Hope is a two-way process forged between those who imagine a better future and those
10 who disseminate and produce imaginaries through geoeconomic promise. Geoeconomic promise
11 is often facilitated through geographies of dispossession, which enables the control or coercion
12 of subjects whose territory is “imagined and administered as somehow beyond the reach of
13 justice... these spaces of exception are spaces where the abstract and projected fears of
14 government lead to the production of terribly tangible fear among the governed on the ground”
15 (Sparke, 2007: 339). These become forced impositions of both neoliberal idealism and
16 geoeconomic hopes founded on geopolitical fears (ibid). In this sense, hope becomes linked to
17 territory and its (re)possession.
18
19

20
21 But in what ways does territory relate to these temporalities? Demarcated by their
22 separation from the state, village and family-life, exiles are thrust into a condition of legal *limen*
23 in which their status is wholly ambiguous and constantly changing depending on their movement
24 and external politics. Most Burmese exiles become fixed within this stage as “neither here nor
25 there; they are betwixt and between the positions assigned and arrayed by law, custom,
26 convention and ceremonial” (1967: 95). Only a select few reach the stage of reaggregation into
27 society—the passage of exile rarely returns actors to where they want/hope to be, but instead
28 delivers them into new, unknown and defamiliarized spaces. Exiles may be at least in part
29 characterized as experiencing time standing still, as though the very passage of time were halted
30 once they entered the moment of exile. This speaks to the tyranny of capitalist time, which
31 dictates in no uncertain terms that if actors are not effectively producing in a capitalist fashion
32 then they remain, for all intents and purposes, stagnant (Castree, 2009).
