Table 1. Logistic regressions and predicted probabilities. 'At what age (if at all) do you think it is acceptable for parents to introduce their children to small serves of alcohol (more than a sip) at home?'. Response: 17 years and under (vs 18 years and over, Not acceptable at any age; 'Don't know' cases are excluded), n = 2,351

		Models 1-9		Model 10: Multivariate 1		Model 11: Multivariate 2		Model 11: Predicted	
Characteristic		Odds ratio		Odds ratio	95% CI	Odds ratio	95% CI	probabilities ^a (%	n
Sex	Ref cat: Male	1.00		1.00					1,165
	Female	0.97	(0.82-1.14)	1.10	(0.91-1.34)				1,186

^{*}significant at the 5% level; **significant at the 1% level; ***significant at the 0.1% level; Ref cat: Reference category; 95% CI: 95% confidence interval

a. Based on median characteristics of the sample: Highest level of education—diploma/certificate; Household income—\$55,000-\$84,999; AUDIT-C score—3; Age at first standard-sized drink of alcohol—18+ years; It is acceptable for adults to get drunk, as long as they are not putting other people in danger—Disagree
