**Insights for a Post-Brexit Era:  
Marketing the UK as a study destination – An analysis of Arab, Chinese and Indian  
student choices**

**INTRODUCTION**

International business and marketing are being shaped by deep geopolitical changes following recent major events including Britain's scheduled exit from the European single market (i.e. Brexit), US elections and waves of migration (Radu & Radu, 2017). Whatever post-referendum trade deal is agreed, the impact on university student recruitment could jeopardise EU student access to study at a UK university (Ayriss, 2017) and mandate the repositioning of British universities (BBC, 2017). As the UK's strategy for leaving the EU may include discontinuing the free movement of EU citizens to and from the UK, it is likely that UK universities will increasingly target non-EU international students. The focus of this study is on Arab, Chinese and Indian students who represent some of the largest groups of non-EU international students studying in British universities, but paradoxically are very under-researched.

The rising number of students studying beyond borders (UKCISA, 2018) reflects both the international expansion of higher education (H.E.) worldwide and the attractiveness of internationalising the student experience (Wit et al., 2015; Healy, 2017). The demand for international higher education provides an attractive financial incentive to a host country's economy (Urbanovič, Wilkins and Huisman, 2016) and generates income for the individual university – many of which charge premium tuition fees for international students (Wit et al., 2015). In the USA, for example, international students contribute US\$14.5 billion a year to the host universities and local stakeholders. In this respect, H.E. constitutes the fifth largest

1  
2  
3 service export (Owens, Srivastava, & Feerasta, 2011). However, in the post-referendum era,  
4  
5 British universities are struggling to reassure potential EU students (Merrick, 2017) and will  
6  
7 need to focus on recruiting students from non-EU destinations. Information available in the  
8  
9 public domain (see Albert, 2017; HEPI, 2017; Merrick, 2017) suggests that international  
10  
11 students who choose the UK as a study destination are facing a period of increasing  
12  
13 uncertainty and risk, given the challenges of the post-referendum climate. Promoting a strong  
14  
15 brand image of UK H.E. is becoming more complex for institutions. Intense competition is  
16  
17 forcing academics, university managers, and policy makers to better understand the process  
18  
19 by which international students select a country and an institution (BBC, 2017).  
20  
21  
22  
23

24  
25 Marketers can influence student decisions through the effective use of marketing  
26  
27 communication strategies (Urbanovič, Wilkins and Huisman, 2016) – however they require  
28  
29 in-depth knowledge of the factors influencing student choice in order to develop successful  
30  
31 recruitment and positioning strategies (Cassidy and Wymer, 2018). Although students can be  
32  
33 segmented according to the reasons why they select a particular institution to study at (see  
34  
35 Casidy & Wymer, 2018), most existing research of international student choices (e.g.  
36  
37 Moogan, 2011; Padlee & Kamaruddin, 2010) has studied international students as a  
38  
39 homogenous sector. As such, they overlook the specific needs of incoming students  
40  
41 originating from different countries or geographic locations. Universities usually translate  
42  
43 their website and marketing material into different languages but tend to use a standard  
44  
45 approach rather than develop tailored marketing messages, images or value propositions  
46  
47 aimed at attracting specific types of international students. In strategic marketing research,  
48  
49 notions of country-of-origin have been used to further our understanding of consumer  
50  
51 stereotyping vis-à-vis beverage brands (Mbah, Ogbuehi & Enyinda, 2011), the impact of the  
52  
53

1  
2  
3 'made in' label (Bertoli, 2013) and image attributes as a source of competitive advantage  
4 (Sutter, Polo & Macleannan, 2014). More research is needed to further our understanding of  
5 the choice of study destination and institution by international students.  
6  
7

8  
9 The objectives of the paper are to identify the factors that influence international student  
10 decisions to study at an international institution and destination. The focus is on summarising  
11 the results of a survey that compares and contrasts the perceptions of Arab, Chinese and  
12 Indian students who enrol at universities in the UK. While previous studies have explored  
13 Chinese and Indian student experiences and H.E. institution selection (e.g. Mazzarol &  
14 Soutar, 2002; Gu, 2009; Zheng, 2014), few have researched Arab students in a UK context,  
15 excluding Mellahi (2000) who draws attention to the need for universities to cast their  
16 perspectives beyond western idiosyncrasies and include non-western business  
17 perspectives.  
18  
19

20 Despite ample evidence regarding the influence of culture on consumer behaviour (Usunier  
21 and Cestre, 2008), there is little research on cross-cultural differences. Our results contribute  
22 knowledge on the factors that influence study destination choice for international students,  
23 expanding upon existing theories of country-of-origin. This information can assist managers  
24 in planning and allocating resources for developing a more effective marketing  
25 communication strategy to recruit Arab, Chinese and Indian students to the UK and thus  
26 address gaps in academic understanding. Unlike many previous studies that focus on a large  
27 number of variables, we use principal components analysis to identify underlying dimensions  
28 or factors that influence an international student's decision to study in the UK, thus enabling  
29 strategic marketers to focus on a smaller set of key performance indicators.

## LITERATURE REVIEW

### *Decision-making processes & Country-of-Origin effect (CoO)*

Decision-making processes can be interpreted through the theoretical lens of country-of-origin (CoO) effect whereby consumers purchase a product or service, not because of its brand or its price but because of where it is made (Javalgi, Cutler & Winans, 2001; Martin, 2010). Acknowledging 'reverse CoO effect', where influence flows from product beliefs to country image (Lee, Lockshin & Greenacre, 2016), CoO could be a source of competitive advantage, especially if a country has a strong positive association with a product or service – such as education. The way in which consumers perceive products originating from a particular country, in other words *CoO effect*, is thought to be an important consideration factor in decision-making (Roth & Romeo, 1992; Martin, 2010).

The image of a country or place plays a decisive part in selecting an international study destination (Srikatanyoo & Gnoth, 2002). A positive country image is necessary to bring about a positive attitude and a favourable image of service providers (Ahmed et al., 2002), confirmed by Elliot, Papadopoulos & Kim (2011) in their study of place image theory that explored relationships between destination, product and country images. Elliot and Papadopoulos (2016) suggest that cognitive country image has the greatest influence on product evaluations whereas affective country image has the greatest influence on destination evaluations. Similarly, Morrish & Lee (2011) put forward that CoO can be a source of sustainable competitive advantage in international higher education, and identified two key factors that are important to Chinese international students when deciding on a study

1  
2  
3 destination for university in New Zealand: its relatively low cost and reputation of being a  
4  
5 safe country.  
6  
7

8  
9 Little comparative research has been undertaken into Arab, Chinese and Indian international  
10  
11 students. There is an argument for linking CoO into marketing communication messages to  
12  
13 highlight the opportunities for enhancing transnational identity and power asymmetries in  
14  
15 international higher education. Classifying students into groups that have similar needs will  
16  
17 enable a university to focus on segments of students with specific decision-making patterns  
18  
19 and requirements – and customise its promotion and services to appeal to the needs of those  
20  
21 consumers as part of their long-term strategy (Öngel & Öngel, 2014; Martin, 2011). As  
22  
23 consumer needs vary considerably from country to country, owing to cultural and other  
24  
25 contextual factors (Fischer & Zeugner-Roth, 2017), strategic marketers must recognise the  
26  
27 different needs of culturally-diverse students and communicate the message effectively to  
28  
29 those students. Decision-making processes and student recruitment are also influenced by  
30  
31 external stimuli such as social media (Rutter, Roper, & Lettice, 2016) and international  
32  
33 student recruitment agents (Beech, 2018).

### 39 ***Country and University Selection***

40  
41 When selecting a study destination, students go through a three-stage decision process:  
42  
43 choosing to study internationally rather than locally; selecting a host country; and institution  
44  
45 choice (Mazzarol & Soutar, 2002). Various 'Push' factors drive the student to leave their  
46  
47 home country and study abroad, including: the perception that an overseas course is superior  
48  
49 to a local one; difficulties in gaining entry acceptance at local universities; preferred  
50  
51 programmes unavailable in the home county; a desire to understand Western culture and the  
52  
53

1  
2  
3 intention to migrate after graduation (Schiermeier, 2012; Mazzarol & Soutar, 2002). Equally,  
4  
5 'Pull' factors encourage a student to choose a particular country, including: global recognition  
6  
7 of the educational standards of the host country (Binsardi & Ekwulugo, 2003), knowledge and  
8  
9 awareness of a certain country, plus family and peer recommendation. As positive word-of-  
10  
11 mouth is fundamental for the success of a long-term strategy to attract students, increasing  
12  
13 emphasis is being placed on nurturing strong alumni links for future developments (Wilkins &  
14  
15 Huisman, 2011). In addition, students often consider the geographic proximity to the home  
16  
17 country when selecting an institution. Student choice is also influenced by cost-related issues,  
18  
19 especially: direct fees paid to the university and living costs (Padlee & Kamaruddin, 2010),  
20  
21 and also the regulation of part-time work in the host country (Binsardi & Ekwulugo, 2003;  
22  
23 Mazzarol & Soutar, 2002; Yang, 2007). Ancillary factors that students consider when  
24  
25 selecting an overseas study destination can be broadly described as: racial discrimination, the  
26  
27 presence of an established population of international students, straightforwardness of  
28  
29 university admission system, immigration procedures and the local environment, as well as  
30  
31 climate.  
32  
33  
34  
35  
36

37 Although university marketing managers have little control over a student's decision to leave  
38  
39 their home-land and study abroad, they can influence the decision process by developing  
40  
41 effective marketing communication messages that attract students to a particular country and  
42  
43 a particular institution. Accepting that the perception of a nation can be manipulated (Castano,  
44  
45 Bonacossavv & Gries, 2016), *International Image Theory* (IIT) proposes that individuals  
46  
47 retain holistic images of other countries that are similar to stereotypes and that these national  
48  
49 images shape attitudes. Over time, 'push' factors have less impact on the student decision  
50  
51 process, and 'pull' factors become increasingly important (Mazzarol & Soutar, 2002; Wilkins  
52  
53

1  
2  
3 & Huisman, 2011). Although 'push' factors operating in the home country will initiate a  
4 student's decision to undertake international study, 'pull' factors operating within the host  
5 country will enhance the comparative attraction of that country to international students  
6  
7  
8  
9 (Mazzarol, 1998).

10  
11  
12  
13 In the case of university choice, many factors influence how international students select an  
14 institution – in particular, the career opportunities resulting from completing the programme  
15 (Geall, 2000; Schiermeier, 2012) the student's interest/ability in a subject area and the  
16 competencies of the academics. Wilkins and Huisman (2011) argue that university ranking  
17 and reputation are the two most dominant factors influencing the choice of an institution.

58  
59  
60  
Mazzarol (1998) and Mazzarol and Soutar (2002) suggest that choice of university is swayed  
by several issues including: university repute and quality, reputation of staff, number of  
students enrolled, alumni networks, word-of-mouth referral, university links with stakeholders  
familiar to the students, advertising/promotion, and finally whether the institution will  
recognise a student's previous qualifications. Further variables that influence university  
selection include: peer and parental advice, formal career guidance, field of study, price-  
related factors such as cost of living, regional and economic job prospects, availability of part-  
time work (Maringe, 2006), along with university facilities such as accommodation and  
library services (Padlee & Kamaruddin, 2010; Yusoff et al., 2015) and the prestige of an  
institution (Casidy & Wymer, 2018). In the field of international student recruitment, there is  
a need for additional research to build upon the existing body of literature on the constructs  
of country and destination images.

### *The Arab, Chinese and Indian Student cohort*

The number of international students studying in the UK is stagnating (Scott, 2017; Jubb, 2018) producing long-term ramifications for the UK economy in the post-referendum era (BBC, 2017). Chinese and Indian students constitute the largest intake of non-EU consumers of international H.E. within the UK and USA (IIE, 2017), although the number of Indian students studying in the UK has dropped by 44% over the last 5 years (UKCISA, 2018). The steady growth of students from Arab states studying internationally reached an all-time high in 2018 (Puka, 2018). Feghali (1997) emphasises the need to clarify the term ‘Arab’ when used in research. In this study, *Arab students* refer to students who come from one of the 22 countries identified by the World Bank and the UN (UNESCO, 2012; The World Bank, 2012)<sup>1</sup>. Researching Arabs as a homogenous market is not unusual in academic research as many scholars have investigated the Arab world as one market (e.g. Elbashier & Nicholls, 1993; Mazawi, 2011; Barakat 2012; Miller-Idriss & Hanauer 2001; Elias, Benjamin & Shiftan 2015).

To provide an overview of the context, Table 1 presents a comparative illustration showing the nuances of the preferences and cultures of Arab, Chinese and Indian consumers. These factors offer some insight into the extent to which differences can be expected regarding the attitudes and choices of students from these regions who choose to study in the UK.

**[INSERT TABLE 1 ABOUT HERE]**

---

<sup>1</sup> Algeria, Bahrain, Comoros, Djibouti, Egypt, Iraq, Jordan, Kuwait, Lebanon, Libya, Mauritania, Morocco, Oman, Palestine, Qatar, Saudi Arabia, Somalia, Sudan, Syria, Tunisia, United Arab Emirates and Yemen - over 350 million people who share similar values.

## METHODOLOGY

This study was conducted in Northern England, in a city renowned for its large international student population enrolled at one of the two city-centre universities: one ‘old’ (pre-1992) and one ‘new’ (post-1992). Previous research based in the UK has used a similar technique of sampling ‘old’ and ‘new’ universities (e.g. Lomas, 2007). In the first instance, a review of each university’s marketing materials was undertaken in 2017, identifying that certain brochures and web content had been translated into different languages – however no further adaptation appears to have been undertaken. A questionnaire was developed to explore factors that influence student decisions to study in the UK. It adopted twenty items originally developed by Mazzarol and Soutar (2002) in their multi-year study of the factors that influence Indonesian, Taiwanese, Chinese and Indian student choices to study abroad. Although over decade old, their survey instrument remains one of the most comprehensive available for investigating international student study choice. Owing to high correlations between some items, we used principal component analysis to reduce the items to a smaller number of more focussed dimensions or factors – unlike Mazzarol and Soutar (2002) who analysed individual items. Our approach has been used in other studies of student choice (e.g. McLeay, Robinson & Yusoff, 2015; Yusoff et al. 2015; Wilkins and Huisman, 2011). A seven-point Likert-type scale was used to measure the importance of individual factors. A score of 1 indicates that a variable influenced student choice to a *low extent* while a score of 7 indicates that there was a *high extent of influence*. Items were authenticated, after consultation with university marketing managers and agents representing the university in the student’s home country. The questionnaire was pre-tested with three sets of focus groups of mixed ethnicity; 8 Arab, Chinese and Indian students. The focus group identified two new items –

1  
2  
3 ‘meeting different cultures’, and ‘not being able to gain entry to their first choice study  
4 destination’ – which were subsequently added to the questionnaire.  
5  
6

7  
8 A pilot study with 35 students was then carried out in which quota sampling was used to  
9 collect data and ensure a similar quota of responses was received from Arab, Chinese and  
10 Indian students. A pre-screening question checked for the respondent’s country/region of  
11 origin.  
12  
13  
14  
15

## 16 17 **RESULTS**

18  
19 In total, 450 questionnaires were distributed to Arab, Chinese and Indian students: 150 to each  
20 of the three groups. Some 317 questionnaires were collected, giving a response rate of 70%.  
21  
22 Table 2 highlights the respondents’ key characteristics across the three groups of students.  
23  
24 Regarding university choice, 51.7% of the respondents attended a post-1992 university and  
25 48.3% of respondents attended a pre-1992 university. The highest frequency of respondents  
26 was those attending postgraduate taught programmes (52.1%), followed by undergraduate  
27 programmes (43.2%) and postgraduate research students (4.1%). Students studying business  
28 and management related programmes represented over two-thirds (66.2%) of the total sample.  
29  
30  
31  
32  
33  
34  
35  
36  
37  
38

39 **[INSERT TABLE 2 ABOUT HERE]**  
40  
41  
42  
43  
44

45  
46 Though responses were received from over 100 students from each group (Arab, Chinese and  
47 Indian), female respondents represented only 30% of the overall total, revealing a potential  
48 limitation. At the time of the survey, there were more female students (55%) than male  
49 students (45%) enrolled in UK universities (Ratcliffe, 2013). It was also noted that 87.6% of  
50  
51  
52  
53

1  
2  
3 the Indian respondents were male and 70.9% of Arab respondents were male. In contrast,  
4  
5 there was an even gender split in the Chinese student sample. The high proportion of male  
6  
7 respondents in the Arab student sample was expected. Data published by the HESA on  
8  
9 international students in the UK indicates that there are almost twice as many Arab male  
10  
11 students as female students in the UK (HESA, 2016).  
12  
13

### 14 15 **Factors influencing student decisions to study in the UK**

16  
17 Eight factors were extracted from the original 22 items which explain 68% of the total  
18  
19 variance – see Table 3. All loadings with less than 0.40 were suppressed, as recommended by  
20  
21 Field (2009). The Bartlett test indicates that the data set has sufficient correlation between the  
22  
23 variables with a high significant score of (0.000). The Kaiser-Meyer-Olkin measure of  
24  
25 adequacy (KMO) shows a value of 0.859, which is ‘great’ according to Field (2009).  
26  
27 Cronbach’s alpha scores for all 8 factors were above 0.9 indicating high levels of reliability.  
28  
29

30  
31 **[INSERT TABLE 3 ABOUT HERE]**  
32  
33

34  
35 Table 4 presents the results of ANOVA tests to measure differences in responses between  
36  
37 different groups of students. *Social safety* is important to all three groups of respondents with  
38  
39 no significant differences found between them. The recent decrease in the numbers of Indian  
40  
41 students studying in Australia has been blamed on assaults against Indian students,  
42  
43 emphasising the importance of social safety in international student choice (Morrish & Lee,  
44  
45 2011; Anderson & Bhati, 2012). *Education quality* is particularly influential for Arab and  
46  
47 Indian students, supported by other studies that suggest the quality of education is the most  
48  
49 significant factor swaying international student decision-making (Lam et al., 2011; Yang,  
50  
51 2007). *Entry obstacles* were more influential for Indian students than for Arab and Chinese  
52  
53

1  
2  
3 students. Arab and Chinese students are most influenced by *environmental* factors such as  
4  
5 geographic proximity, comfortable climate and a desirable lifestyle; these factors have been  
6  
7 highlighted in previous literature and are considered a strong advantage for international  
8  
9 students when selecting a country (e.g. Yang 2007). *Recommendations* were equally  
10  
11 important to all three groups. Word-of-mouth referrals through family members and peers are  
12  
13 one of the most successful strategies in attracting students especially through positive  
14  
15 feedback from contented students and well-resourced alumni networks (Lam *et al.*, 2011).  
16  
17 *Knowledge of host country* has parallels with the findings of Mazzarol & Soutar (2002) who  
18  
19 indicate that the more knowledge a student has of a country, the more likely they will choose  
20  
21 it as a study destination. This factor is most influential for Indian students. *Work and*  
22  
23 *immigration* are also important motivators for Indian students but less influential for Arab or  
24  
25 Chinese students. Immigration policy is a key factor for selecting a study destination (Cheung  
26  
27 *et al.*, 2011), in addition to the existence of a skilled migration policy and the likelihood of  
28  
29 permanent residency (Yang, 2007). It is also thought that gaining 'Western' experience and  
30  
31 integrating with other cultures is a motivator for students to study abroad (Russell, 2005). In  
32  
33 this study, it was found that *meeting new cultures* is an important factor, particularly for  
34  
35 Indian and Chinese students.  
36  
37  
38  
39

40 The eight factors link into CoO effect, underscoring the extent to which consumers are  
41  
42 influenced by the place where a product is made (or in the context of university education,  
43  
44 consumed) rather than by the brand or its price. Similarly, the results correlate with IIT  
45  
46 (international image theory) which supports the idea that national images can be triggered by  
47  
48 subtle (and subliminal) cues about individual characteristics of a country, for example the  
49  
50 foreign-sourced degree and cultural enlightenment. Such factors relate to CoO appeal, as  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 evoked in research conducted by Sánchez et al. (2006) in their study of American, French and  
4 Chinese students (which highlighted the attraction of value of a foreign-sourced/foreign-  
5 earned degree), and also in the work of Massey & Burrow (2012) international student in  
6 Canada. Moreover, 'push/pull' factors are also relevant since marketing efforts can be used  
7 (such as agents and advertising) to create an aura of social safety, draw attention to an  
8 institution's reputation for quality education, and enhance the environment. Marketing efforts,  
9 online and offline, need to design tailored communication messages that correspond to the  
10 factors that are known to heavily influence student decisions to study in the UK. Overall,  
11 these results provide a contemporary and topical perspective of CoO, supplementing the work  
12 of Balabanis & Adamantios (2008) and in line with Castano, Bonacossavv & Gries (2016) on  
13 IIT.

27  
28  
29  
30

31 As illustrated in Table 5, the results indicate that there are significant differences between  
32 male and female students regarding three of the eight factors that influence their decision to  
33 study in the UK (*education quality, entry obstacles and the environment*). Table 6 provides a  
34 summary of the rankings for original question items.

## 48 **Conclusions**

49

50 Framed in the post-referendum era, the objectives of this study were to use CoO theory as an  
51 underpinning concept to identify the factors that influence international student decisions to  
52  
53

1  
2  
3 study in the UK. Focusing on Arab, Chinese and Indian students studying in the UK, the  
4  
5 study compares the attitudes of each group or segment, and attempts to address gaps in the  
6  
7 existing literature. We identify 8 CoO-related factors that influence international student  
8  
9 decisions to study in the UK (*social safety, education quality, entry obstacles, environment,*  
10  
11 *recommendations, knowledge of host country, work and immigration, and meeting new*  
12  
13 *cultures*). The results contribute to the area of geographic/ethnic segmentation in international  
14  
15 student recruitment by highlighting detailed differences and similarities between Arab,  
16  
17 Chinese and Indian students.  
18

19  
20 Our results have practical implications and can be used to provide recommendations to  
21  
22 marketing managers in UK universities who are targeting international students with a view to  
23  
24 recruiting, as well as to policy-makers seeking to support the UK's H.E. position in the  
25  
26 highly-competitive global marketplace. *Social safety* encompasses an anti-discrimination,  
27  
28 racism-free environment, with strong international community and rich social diversity; it is a  
29  
30 factor that drives students to the UK and needs to be highlighted in marketing communication  
31  
32 messages. The importance of *educational quality* emphasises the need for British universities  
33  
34 to maintain and improve their strong educational reputation through internationally-  
35  
36 recognised accreditation and overall position on global league tables. Marketers are advised to  
37  
38 communicate various features including quality education, employability, research  
39  
40 opportunities, student satisfaction and other key metrics. By doing so, they demonstrate to  
41  
42 potential students the comparative advantage of studying in the UK and ensuing career  
43  
44 prospects following completion of a degree. The comfortable external *environment* and  
45  
46 opportunities for *meeting new cultures* are areas that marketing campaigns already highlight,  
47  
48 however, attention should be drawn to CoO appeal, including the UK's distinctive night life,  
49  
50 the historic heritage of many British cities, and the diverse multi-cultural student environment  
51  
52  
53

1  
2  
3 offered by British universities. *Knowledge of the host country* also influences student  
4 decision-making to select the UK as a study destination; therefore the onus is on policy-  
5 makers and marketers to provide potential students with adequate (and attractive) information  
6 that generates positive country image perceptions.  
7  
8

9  
10  
11 Acknowledging the limitations, there are a number of opportunities for further research. The  
12 study uses two universities in one geographic area of the UK; therefore, care must be taken  
13 when generalising the results to other locations. Only 30% of respondents were female, which  
14 is reflective of the high number of Arab male students studying in the UK; future studies may  
15 wish to focus more on female students. The questionnaires were distributed to students after  
16 their arrival in the UK. Measuring student attitudes prior to arriving to the UK would provide  
17 a deeper insight into the current knowledge and understanding of H.E. marketing. It would be  
18 equally constructive to compare a quantitative study with a qualitative study that considers  
19 emotions, feelings and experiences of international students. In addition, we analyse the  
20 responses of Arab students as a group, although cultural differences can be found in different  
21 Arab countries or even within a country (Obeidat et al., 2012).  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31  
32  
33  
34

35 Future research could conduct a longitudinal study to examine international student attitudes  
36 prior their arrival to the UK and after their arrival. This data would yield valuable knowledge  
37 by examining student attitudes towards communication strategies over a longer period of time  
38 and by investigating evidence of evolution in attitudes post-arrival. Despite the increasingly  
39 widespread use of social media marketing, few studies have explored the role that digital  
40 marketing and social media play in international student recruitment, thus providing an  
41 opportunity for future studies to explore these media in an Arab, Chinese and Indian context.  
42  
43  
44  
45  
46  
47  
48  
49  
50 Additional research could compare and contrast the results from the UK with those of Arab,  
51 Chinese and Indian students studying in other countries such as the USA, Australia or  
52  
53

1  
2  
3 Canada. As we focused on Arab, Chinese and Indian students, further research could expand  
4  
5 by exploring international students from other regions in the world, to bring the current  
6  
7 literature a step closer to providing a broader profile of international students studying in the  
8  
9 UK. Further research of the differences that exist within the Arab cohort would also be useful.  
10  
11 The context of this study was UK universities and international non-EU students in a post-  
12  
13 referendum environment. Research in other sectors and regions would further our  
14  
15 understanding of the influence that deep geopolitical changes have on international marketing  
16  
17 practice and research.

**Table 2: Demographic profile of respondents**

Factor	Arab n=103 (32.5 %)	Chinese n=101 (31.9 %)	Indian n=113 (35.6 %)	Total of three groups n=317 (100 %)
<b>Gender</b>				
Male	n = 73 (70.9 %)	n = 50 (49.5 %)	n = 99 (87.6 %)	n = 222 (70%)
Female	n = 30 (29.1 %)	n = 51 (50.5 %)	n = 14 (12.4 %)	n = 95 (30.0 %)
<b>Year(s) spent in the UK</b>				
Less than 1 year	n = 15 (14.6 %)	n = 49 (48.5 %)	n = 46 (40.7 %)	n = 110 (34.7%)
1-3 years	n = 54 (52.4 %)	n = 40 (39.6 %)	n = 66 (58.4 %)	n = 160 (50.5%)
Over 3 years	n = 34 (33.0 %)	n = 12 (11.9 %)	n = 1 (0.9%)	n = 47 (14.8 %)

**Table 3: Factors influencing students' decision to study in the UK**

	Factor							
	Social Safety	Education Quality	Entry Obstacles	Environment	Recommendations	Knowledge of HC	Work & Immigration	Meeting new cultures
<b>Social Safety</b>								
No racial discrimination in the area of my study	.760							
Low crime environment	.752							
An established overseas student community	.582							
<b>Education Quality (H.E. provision)</b>								
The British quality of education is very high		.835						
The course in the UK is better than that offered back home		.736						
The high recognition of the UK qualification		.721						
<b>Entry Obstacles</b>								
It was difficult to gain entry to University at my home country			.754					
The course was not available at home			.737					
I was unable to gain entry to study in my first choice country			.688					
<b>Environment</b>								
It's an exciting place to live				.746				
The UK has a comfortable climate				.672				
The area had quiet living environment				.575				
The geographic closeness				.489				
<b>Recommendations</b>								
Recommendation by others					.777			
I have friends/ relatives studying in the UK					.652			
<b>Knowledge of host country</b>								
I had a lot of knowledge of the UK						.696		
It was easy to obtain information on the UK						.668		
<b>Work and Immigration</b>								
The prospect job opportunities of working in the UK after completing my degree							.863	
I have friends/relatives working in the UK							.577	
The intention to migrate to the UK							.407	
<b>Meeting new cultures</b>								
To meet different cultures								.754
To gain better understanding on the UK/West								.740
